

# Service Manual

ORDER NO.  
**ARP3241**

## PLASMA DISPLAY

# PDP-504CMX PDP-434CMX

**THIS MANUAL IS APPLICABLE TO THE FOLLOWING MODEL(S) AND TYPE(S).**

Model	Type	Power Requirement	Remarks
PDP-504CMX	LUC/1	AC100 - 120V	
PDP-434CMX	LUC/1	AC100 - 120V	

**This service manual should be used together with the following manual(s).**

Model No.	Order No.	Remarks
PDP-504CMX	ARP3242	SCHEMATIC DIAGRAM, PCB CONNECTION DIAGRAM
PDP-434CMX		

### HOW TO DISTINGUISH THE CURRENT MODEL FROM THE PREVIOUS MODEL

• Serial No.

Previous model  
(PDP-504CMX/LUC)  
(PDP-434CMX/LUC)

CFSS 00001JP

• Name label, Barcode label

Number for identification of the previous model

Current model  
(PDP-504CMX/LUC/1)  
(PDP-434CMX/LUC/1)

CFSS10001JP

PDP-504CMX/1

Number for identification of the current model

MFD. AUGUST 2004

SER. NO.

CFSS10001JP

For details, see the next section "How to distinguish the current model from the previous model."

For details, refer to "Important Check Points for Good Servicing".

**PIONEER CORPORATION** 4-1, Meguro 1-chome, Meguro-ku, Tokyo 153-8654, Japan

**PIONEER ELECTRONICS (USA) INC.** P.O. Box 1760, Long Beach, CA 90801-1760, U.S.A.

**PIONEER EUROPE NV** Haven 1087, Keetberglaan 1, 9120 Melsele, Belgium

# HOW TO DISTINGUISH THE CURRENT MODEL FROM THE PREVIOUS MODEL

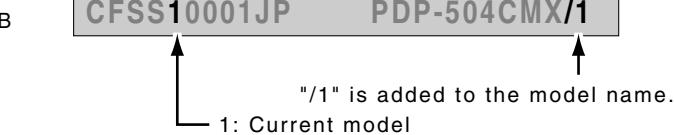

## A ■ Label reading

You can distinguish the current model from the previous model by referring to the model-name label and the barcode label.

### ● On the serial label

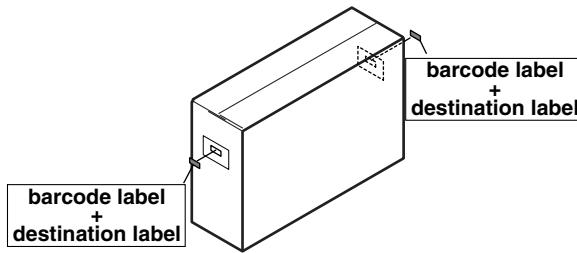

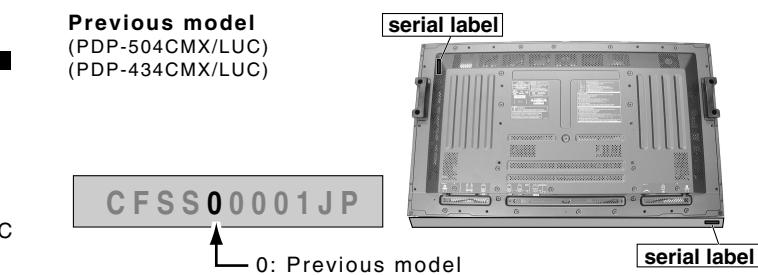

#### Current model

(PDP-504CMX/LUC/1)  
(PDP-434CMX/LUC/1)

### ● On the barcode label

Current model : 1  
Previous model : 0

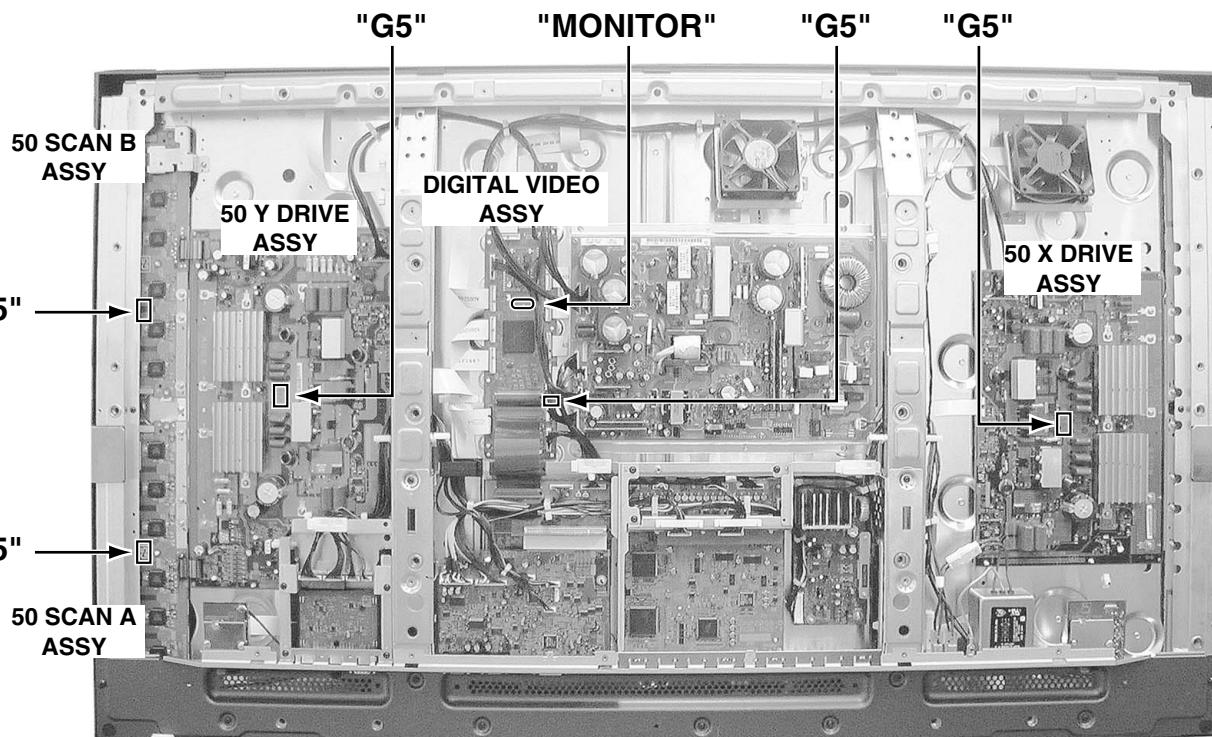

## ■ Distinction of PC boards

Some PC boards of the previous model are incompatible with the current model.

Do NOT mount a PC board of the previous model in the current model, as it may cause a failure.  
When ordering a PC board, be sure to check the part number correctly.

On a PC board of the current model, "G5" is marked, as shown below.

D **Note:** The photo is from a 50-inch model, but G5 markings are provided in exactly the same way as with the 50-inch model.

# SAFETY INFORMATION

**This service manual is intended for qualified service technicians ; it is not meant for the casual do-it-yourselfer. Qualified technicians have the necessary test equipment and tools, and have been trained to properly and safely repair complex products such as those covered by this manual. Improperly performed repairs can adversely affect the safety and reliability of the product and may void the warranty. If you are not qualified to perform the repair of this product properly and safely, you should not risk trying to do so and refer the repair to a qualified service technician.**

## WARNING

**This product contains lead in solder and certain electrical parts contain chemicals which are known to the state of California to cause cancer, birth defects or other reproductive harm.**

**Health & Safety Code Section 25249.6 - Proposition 65**

A

## NOTICE

(FOR CANADIAN MODEL ONLY)

Fuse symbols (fast operating fuse) and/or (slow operating fuse) on PCB indicate that replacement parts must be of identical designation.

B

## REMARQUE

(POUR MODÈLE CANADIEN SEULEMENT)

Les symboles de fusible (fusible de type rapide) et/ou (fusible de type lent) sur CCI indiquent que les pièces de remplacement doivent avoir la même désignation.

C

## SAFETY PRECAUTIONS

**NOTICE :** Comply with all cautions and safety related notes located on or inside the cabinet and on the chassis.

The following precautions should be observed :

1. When service is required, even though the PDP UNIT an isolation transformer should be inserted between the power line and the set in safety before any service is performed.
2. When replacing a chassis in the set, all the protective devices must be put back in place, such as barriers, nonmetallic knobs, adjustment and compartment covershields, isolation resistor-capacitor, etc.
3. When service is required, observe the original lead dress. Extra precaution should be taken to assure correct lead dress in the high voltage circuitry area.
4. Always use the manufacture's replacement components. Especially critical components as indicated on the circuit diagram should not be replaced by other manufacture's. Furthermore where a short circuit has occurred, replace those components that indicate evidence of overheating.
5. Before returning a serviced set to the customer, the service technician must thoroughly test the unit to be certain that it is completely safe to operate without danger of electrical shock, and be sure that no protective device built into the set by the manufacture has become defective, or inadvertently defeated during servicing. Therefore, the following checks should be performed for the continued protection of the customer and servicetechnician.

6. Perform the following precautions against unwanted radiation and rise in internal temperature.

- Always return the internal wiring to the original styling.
- Attach parts (Gascket, Ferrite Core, Ground, Rear Cover, Shield Case etc.) surely after disassembly.

7. Perform the following precautions for the PDP panel.

- When the front case is removed, make sure nothing hits the panel face, panel corner, and panel edge (so that the glass does not break).
- Make sure that the panel vent does not break. (Check that the cover is attached.)
- Handle the FPC connected to the panel carefully. Twisting or pulling the FPC when connecting it to the connector will cause it to peel off from the panel.

8. Pay attention to the following.

- When the front case is removed, infrared ray is radiated and may disturb reception of the remote control unit.
- Pay extreme caution when the front case and rear panel are removed because this may cause a high risk of disturbance to TVs and radios in the surrounding.

D

E

F

## A Leakage Current Cold Check

With the AC plug removed from an AC power source, place a jumper across the two plug prongs. Turn the AC power switch on. Using an insulation tester (DC 500V), connect one lead to the jumpered AC plug and touch the other lead to each exposed metal part (input/output terminals, screwheads, metal overlays, control shafts, etc.), particularly any exposed metal part having a return path to the chassis. Exposed metal parts having a return path to the chassis should have a minimum resistor reading of  $0.3\text{M}\Omega$  and a maximum resistor reading of  $5\text{M}\Omega$ . Any resistor value below or above this range indicates an abnormality which requires corrective action. Exposed metal parts not having a return path to the chassis will indicate an open circuit.

## B Leakage Current Hot Check

Plug the AC line cord directly into an AC power source (do not use an isolation transformer for this check).

Turn the AC power switch on.

Using a "Leakage Current Tester (Simpson Model 229 equivalent)", measure for current from all exposed metal parts of the cabinet (input/output terminals, screwheads, metal overlays, control shaft, etc.), particularly any exposed metal part having a return path to the chassis, to a known earth ground (water pipe, conduit, etc.). Any current measured must not exceed 0.5mA.

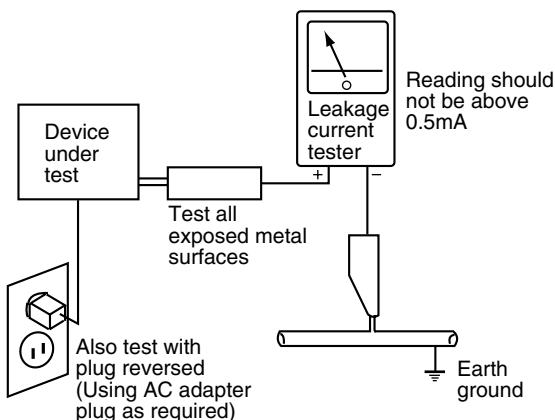

## PRODUCT SAFETY NOTICE

Many electrical and mechanical parts in PIONEER set have special safety related characteristics. These are often not evident from visual inspection nor the protection afforded by them necessarily can be obtained by using replacement components rated for higher voltage, wattage, etc. Replacement parts which have these special safety characteristics are identified in this Service Manual.

Electrical components having such features are identified by marking with a  $\triangle$  on the schematics and on the parts list in this Service Manual.

The use of a substitute replacement component which does not have the same safety characteristics as the PIONEER recommended replacement one, shown in the parts list in this Service Manual, may create shock, fire or other hazards.

Product Safety is continuously under review and new instructions are issued from time to time. For the latest information, always consult the current PIONEER Service Manual. A subscription to, or additional copies of, PIONEER Service Manual may be obtained at a nominal charge from PIONEER.

AC Leakage Test

**ANY MEASUREMENTS NOT WITHIN THE LIMITS OUTLINED ABOVE ARE INDICATIVE OF A POTENTIAL SHOCK HAZARD AND MUST BE CORRECTED BEFORE RETURNING THE SET TO THE CUSTOMER.**

## ■ Charged Section

The places where the commercial AC power is used without passing through the power supply transformer.

If the places are touched, there is a risk of electric shock. In addition, the measuring equipment can be damaged if it is connected to the GND of the charged section and the GND of the non-charged section while connecting the set directly to the commercial AC power supply. Therefore, be sure to connect the set via an insulated transformer and supply the current.

1. Power Cord
2. AC Inlet with Filter
3. Power Switch (S1)
4. Fuse (In the POWER SUPPLY Unit)
5. STB Transformer and Converter Transformer  
(In the POWER SUPPLY Unit)
6. Other primary side of the POWER SUPPLY Unit

## ● 50 inch model

 : Part is Charged Section.

 : Part is the High Voltage Generating Points other than the Charged Section.

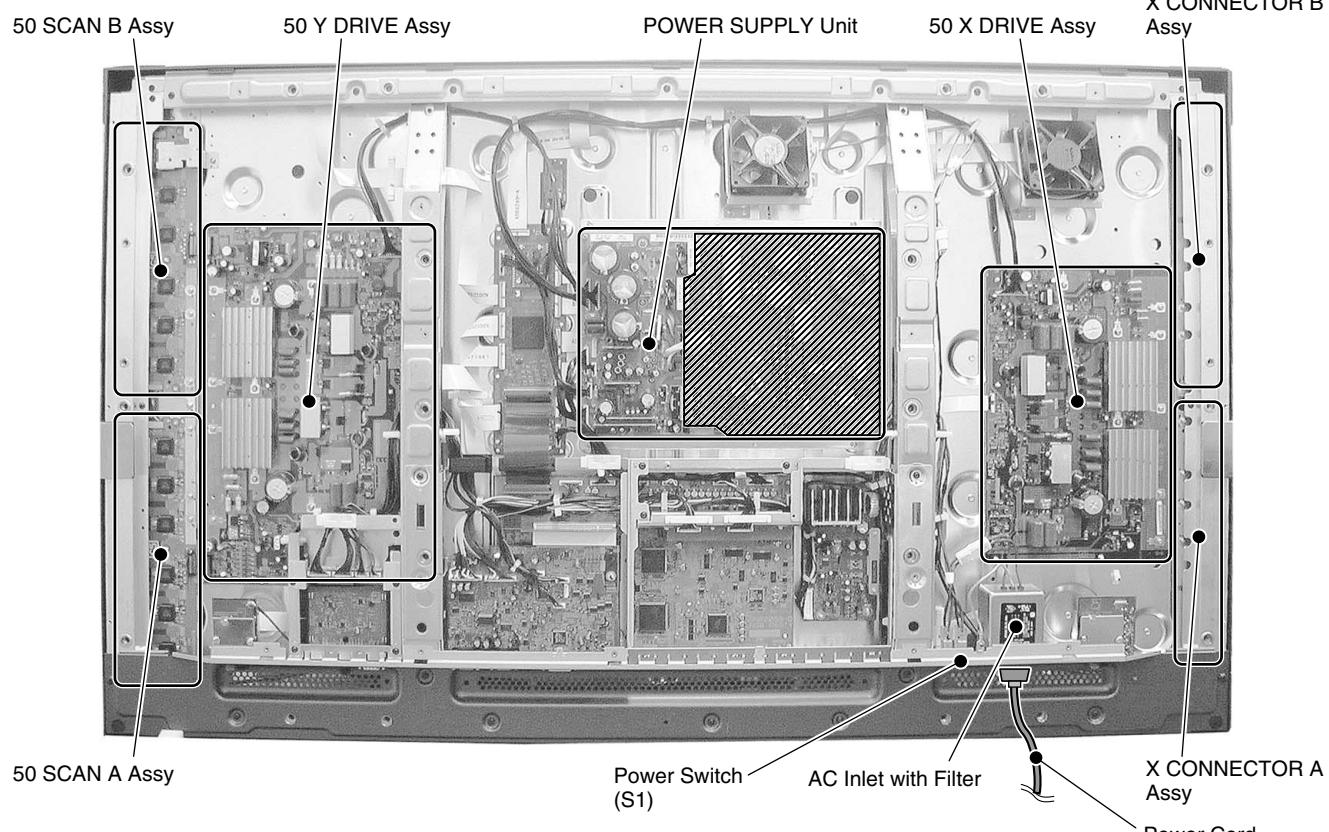

Fig.1 Charged Section and High Voltage Generating Point (Rear view)

## ■ High Voltage Generating Point

The places where voltage is 100 V or more besides the live parts are described above. You must not touch them, since there is risk of electric shock.

The VSUS voltage remains for several minutes after the power to the unit is turned off. These places must not be touched until about 10 minutes after the power is turned off, or it is confirmed with a tester that there is no residual VSUS voltage.

1. POWER SUPPLY Unit.....(223V)
2. 50 X DRIVE Assy .....(-230V to 223V)
3. 50 Y DRIVE Assy .....(353V)
4. 50 SCAN A Assy .....(353V)
5. 50 SCAN B Assy .....(353V)
6. X CONNECTOR A Assy .....(-230V to 223V)
7. X CONNECTOR B Assy .....(-230V to 223V)

Discharge the VSUS voltage, as shown below:

### [Method for discharging the VSUS voltage]

1. Set DRF\_SW on the DIGITAL VIDEO Assy to ON (Drive OFF status). \*1, \*2
2. Leave the switch at that position for about 20-30 seconds.
3. If the power is on, turn it off. Then return DRF\_SW to the OFF position. \*3

### Notes

\*1: You can also set the unit to "Drive OFF status" by sending the "DRF" RS232C command from the PC.

\*2: DRF\_SW can be switched whether the power is on or off.

\*3: Power-down will occur if DRF\_SW is set to OFF while the power is on. (See "7.1.5 POWER ON/OFF FUNCTION FOR THE LARGE-SIGNAL SYSTEM".)

## [Important Check Points for Good Servicing]

In this manual, procedures that must be performed during repairs are marked with the below symbol.  
Please be sure to confirm and follow these procedures.

### 1. Product safety

Please conform to product regulations (such as safety and radiation regulations), and maintain a safe servicing environment by following the safety instructions described in this manual.

- ① Use specified parts for repair.

Use genuine parts. Be sure to use important parts for safety.

- ② Do not perform modifications without proper instructions.

Please follow the specified safety methods when modification(addition/change of parts) is required due to interferences such as radio/TV interference and foreign noise.

- ③ Make sure the soldering of repaired locations is properly performed.

When you solder while repairing, please be sure that there are no cold solder and other debris.  
Soldering should be finished with the proper quantity. (Refer to the example)

- ④ Make sure the screws are tightly fastened.

Please be sure that all screws are fastened, and that there are no loose screws.

- ⑤ Make sure each connectors are correctly inserted.

Please be sure that all connectors are inserted, and that there are no imperfect insertion.

- ⑥ Make sure the wiring cables are set to their original state.

Please replace the wiring and cables to the original state after repairs.  
In addition, be sure that there are no pinched wires, etc.

- ⑦ Make sure screws and soldering scraps do not remain inside the product.

Please check that neither solder debris nor screws remain inside the product.

- ⑧ There should be no semi-broken wires, scratches, melting, etc. on the coating of the power cord.

Damaged power cords may lead to fire accidents, so please be sure that there are no damages.  
If you find a damaged power cord, please exchange it with a suitable one.

- ⑨ There should be no spark traces or similar marks on the power plug.

When spark traces or similar marks are found on the power supply plug, please check the connection and advise on secure connections and suitable usage. Please exchange the power cord if necessary.

- ⑩ Safe environment should be secured during servicing.

When you perform repairs, please pay attention to static electricity, furniture, household articles, etc. in order to prevent injuries.  
Please pay attention to your surroundings and repair safely.

### 2. Adjustments

To keep the original performance of the products, optimum adjustments and confirmation of characteristics within specification.  
Adjustments should be performed in accordance with the procedures/instructions described in this manual.

### 3. Lubricants, Glues, and Replacement parts

Use grease and adhesives that are equal to the specified substance.  
Make sure the proper amount is applied.

### 4. Cleaning

For parts that require cleaning, such as optical pickups, tape deck heads, lenses and mirrors used in projection monitors, proper cleaning should be performed to restore their performances.

### 5. Shipping mode and Shipping screws

To protect products from damages or failures during transit, the shipping mode should be set or the shipping screws should be installed before shipment. Please be sure to follow this method especially if it is specified in this manual.

## 2. EXPLODED VIEWS AND PARTS LIST

NOTES: • Parts marked by "NSP" are generally unavailable because they are not in our Master Spare Parts List.  
• The  $\Delta$  mark found on some component parts indicates the importance of the safety factor of the part.  
Therefore, when replacing, be sure to use parts of identical designation.  
• Screws adjacent to  $\nabla$  mark on product are used for disassembly.  
• For the applying amount of lubricants or glue, follow the instructions in this manual.  
(In the case of no amount instructions, apply as you think it appropriate.)

### (2) CONTRAST TABLE

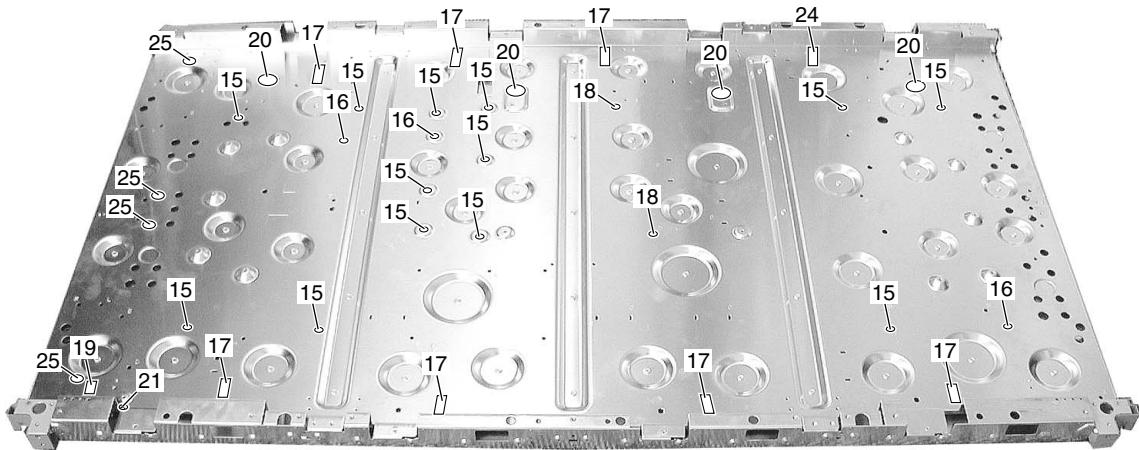

PDP-504CMX/LUC/1 and PDP-434CMX/LUC/1 are constructed the same except for the following:

Mark	No.	Symbol and Description	PDP-504CMX/ LUC/1	PDP-434CMX/ LUC/1
	1	Upper Carton (504CMX)	AHD3216	Not used
	1	Upper Carton (434CMX)	Not used	AHD3232
	2	Under Carton (504CMX)	AHD3037	Not used
	2	Under Carton (434CMX)	Not used	AHD3100
	3	Pad	AHA2280	AHA2282
	4	Pad	AHA2280	AHA2283
	6	Front Sheet	AHB1241	Not used

### PDP SERVICE Assy (AWU1115)

- **Parts List**

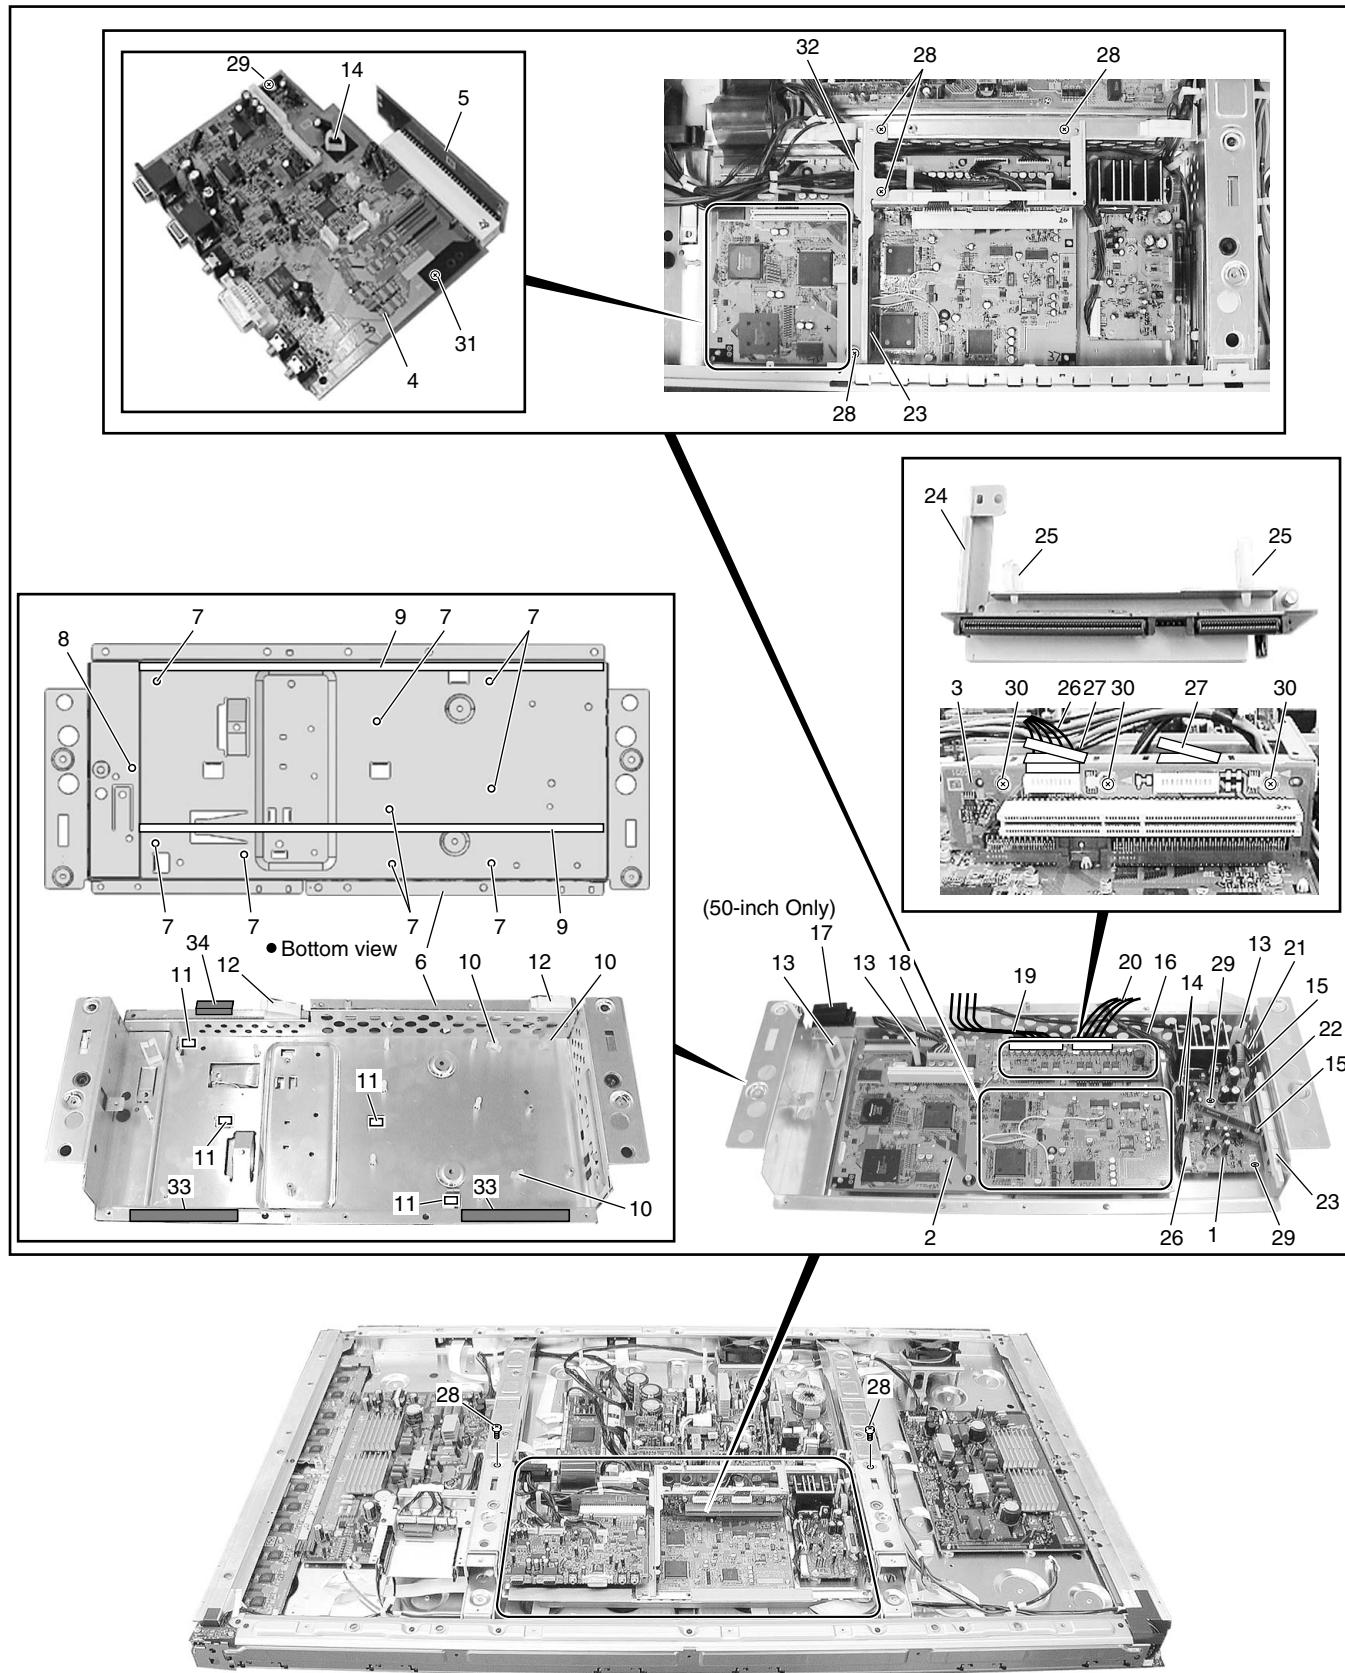

<b>Mark No.</b>	<b>Description</b>	<b>Part No.</b>	
NSP	P. Chassis (43) Assy	AWU1112	A
NSP	Front Chassis H (43)	ANA1714	
	F. Chassis VL (43M)	ANA1755	
	F. Chassis VR (43M)	ANA1756	
	Sub Frame L Assy (43M)	ANG2613	
	Sub Frame R Assy (43M)	ANG2628	
	Rear Frame (43M)	ANG2625	
NSP	SVC.Terminl P434CMX	ANG2701	B
	Wire Saddle	AEC1745	
	PCB Support	AEC1938	
	PCB Spacer	AEC1941	
	PCB Spacer	AEC1947	
	Wire Clip	AEC1948	
	Wire Clip	AEC1992	
	Panel Cushion H (43M)	AED1253	
	Panel Cushion V (43M)	AED1254	
	Front Spacer (CMX)	AMR3384	
	Y Drive Protect Sheet	AMR3346	
	Enclosure Sheet 1	AMR3405	C
	Enclosure Sheet 2 (V)	AMR3411	
	Front Case Spacer	AMR3430	
	Cable Gard	AMR3439	
	Caution Label	AAX3031	
NSP	Drive Voltage Label	ARW1097	
	Screw	ABZ30P060FTC	
	Screw	AMZ30P060FTB	D
	Screw	AMZ30P080FTC	
	Screw	BPZ30P080FTB	
	Screw	APZ30P120FTB	
	Screw	TBZ40P080FTB	
	Screw	VBB30P080FNI	
	Screw	PMB30P060FNI	
NSP	Front Case (434CMX SVC)	AMB2840	
	Rear Case (43M)	ANE1624	
	Pad	AHA2282	
	Pad	AHA2283	E
	Carton	AHD3100	
NSP	Upper Carton 434CMX S	AHD3257	
	Protect Sheet	AHG1331	
	Sel Plate	ANG2712	
	HL18	AEC1980	
	Card Spacer	AEC2013	
	Gasket FC-T	ANK1757	

## ■ 1 ■ 2 ■ 3 ■ 4 ■ 2.4 MULTI BASE SECTION for PDP-504CMX and PDP-434CMX models

### 2.4.1 MULTI BASE SECTION

A

Note : This illustration is 50 inch model.

## MULTI BASE SECTION parts List

<u>Mark No.</u>	<u>Description</u>	<u>Part No.</u>	<u>Mark No.</u>	<u>Description</u>	<u>Part No.</u>
1	AUDIO AMP Assy	AWZ6848	18	10/11P Housing Wire (J110)	See Contrast table(2)
2	RGB Assy	AWZ6992	19	10P Housing Wire (J113)	ADX2908
3	VIDEO SLOT I/F Assy	AWZ6851	20	12P Housing Wire (J112)	ADX2892
4	AV I/O Assy	See Contrast table(2)			
5	AV I/O I/F Assy	AWZ6859	21	13P/6P Housing Wire (J104)	ADX2910
			22	COVER Assy	AWZ6858
NSP 6	Multi Base (CMX)	ANA1757	23	Guide Rail EX	AEC1994
NSP 7	PCB Holder	AEC1088	24	Slot Stay	ANG2608
8	PCB Spacer	AEC1991	25	Wire Saddle	AEC1745
9	Gasket C-M	ANK1752			
10	Locking Card Spacer	AEC1429	26	11P Housing Wire (J111)	See Contrast table(2)
			27	Flat Clamp	AEC1879
11	Ground Finger	ANG2468	28	Screw	AMZ30P060FTB
12	Clamp	AEC1884	29	Screw	PMB30P060FNI
13	Wire Saddle	AEC1989	30	Screw	VBB30P080FNI
14	Mini Clamp	AEC1971			
15	Double Locking Spacer	AEC1988	31	Pin Grommet	AEC1015
16	15P/16P Housing Wire (J106)	ADX2907	32	Video Stay	ANG2607
17	Cable Clamp	See Contrast table(2)	33	Gasket M-T150	See Contrast table(2)
			34	Shield Sheet	AEC2004

### (2) CONTRAST TABLE

PDP-504CMX/LUC/1 and PDP-434CMX/LUC/1 are constructed the same except for the following:

Mark	No.	Symbol and Description	PDP-504CMX/ LUC/1	PDP-434CMX/ LUC/1
	4	AV I/O Assy	AWZ6847	AWZ6894
	17	Cable Clamp	AEC1707	Not used
	18	10/11P Housing Wire (J110)	ADX2890	ADX2912
	26	11P Housing Wire (J111)	ADX2891	ADX2913
	33	Gasket M-T150	ANK1753	ANK1755

**RGB ASSY (2/10, 3/10, 4/10)****A MAIN AD BLOCK, MAIN LPF BLOCK, SUS LPF&AD BLOCK**

Input: INPUT 1

Signal: RGB, XGA 60 Hz, Color-bar

⑫ to ⑬, ⑭ : With two screens, a SUB screen chooses INPUT1 and observes it.

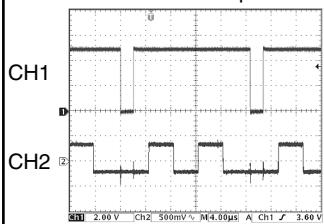

**AV I/O ASSY (1/3)**

- VIDEO      • AV/IO BLOCK
- Input: INPUT 1
- Signal: RGB, XGA 60 Hz, Color-bar

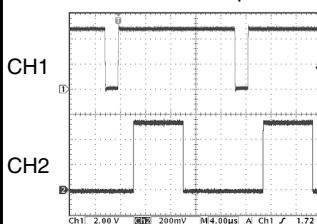

- AUDIO
- Input: INPUT 1
- Signal: 200mVrms, 1 kHz input, VOL MAX

A

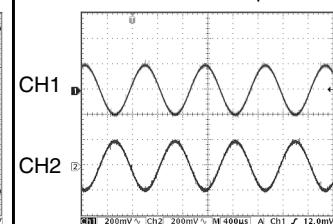

- ④ CH1: CN7605-pin 10(HD\_IO)**  
V: 2V/div. H: 4μsec/div.  
**① CH2: CN7605-pin 16 (R\_IO)**  
V: 500mV/div. H: 4μsec/div.

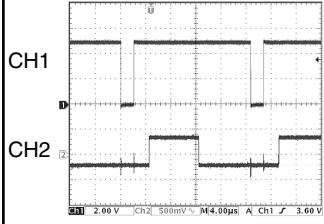

- ⑩ CH1: JA7606-pin 13 (HD)**  
V: 2V/div. H: 4μsec/div.  
**⑦ CH2: JA7606-pin 2 (G)**  
V: 200mV/div. H: 4μsec/div.

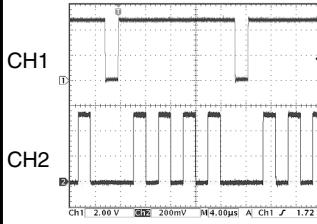

- ⑬ CH1: CN7601-pin 14 (+L\_OUT)**  
V: 200mV/div. H: 400μsec/div.  
**⑭ CH2: CN7601-pin 13 (-L\_OUT)**  
V: 200mV/div. H: 400μsec/div.

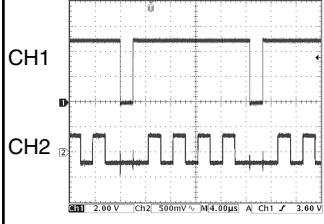

- ④ CH1: CN7605-pin 10(HD\_IO)**  
V: 2V/div. H: 4μsec/div.  
**② CH2: CN7605-pin 14 (G\_IO)**  
V: 500mV/div. H: 4μsec/div.

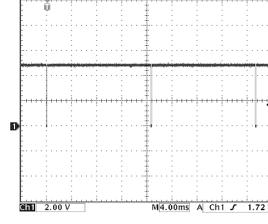

- ⑩ CH1: JA7606-pin 13 (HD)**  
V: 2V/div. H: 4μsec/div.  
**⑧ CH2: JA7606-pin 3 (B)**  
V: 200mV/div. H: 4μsec/div.

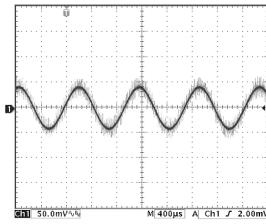

- ④ CH1: CN7605-pin 10(HD\_IO)**  
V: 2V/div. H: 4μsec/div.  
**③ CH2: CN7605-pin 12 (B\_IO)**  
V: 500mV/div. H: 4μsec/div.

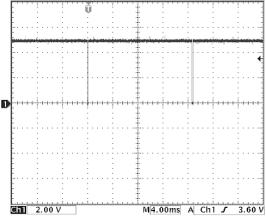

- ⑨ JA7606-pin 14 (VD)**  
V: 2V/div. H: 4msec/div.

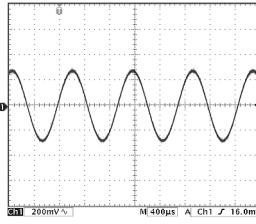

- ⑯ IC5003-pin 1 (L\_AUDIO)**  
V: 50mV/div. H: 400μsec/div.

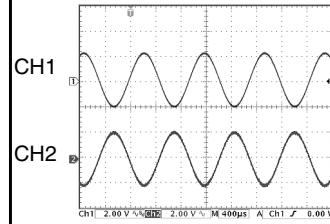

- ⑤ CN7605-pin 9 (VD\_IO)**  
V: 2V/div. H: 4msec/div.

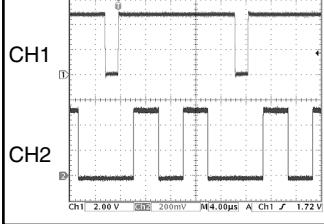

- ⑪ IC7601-pin 12 (L\_AUDIO)**  
V: 200mV/div. H: 400μsec/div.

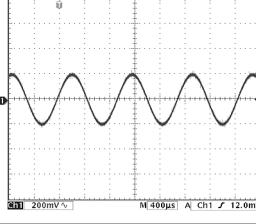

- ⑯ CH1: CN5003-pin 9 (L-)**  
V: 2V/div. H: 400μsec/div.  
**⑰ CH2: CN5003-pin 8 (L+)**  
V: 2V/div. H: 400μsec/div.

- ⑩ CH1: JA7606-pin 13 (HD)**  
V: 2V/div. H: 4μsec/div.  
**⑥ CH2: JA7606-pin 1 (R)**  
V: 200mV/div. H: 4μsec/div.

- ⑫ IC7603-pin 14 (L\_AUDIO)**  
V: 200mV/div. H: 400μsec/div.

# 50 (43) X DRIVE ASSY, 50 (43) Y DRIVE ASSY and 50 (43) SCAN A ASSY

• 50 (43) X SUS BLOCK, 50 (43) Y LOGIC BLOCK, 50 (43) Y SUS BLOCK

Note:  
50 (43) \*\*\* Assy means (50 \*\*\* Assy or 43 \*\*\* Assy.)

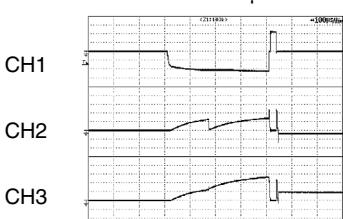

A

- ① Drive Output Waveform (1 field,color-bar)**  
 CH1: R1226 (XPSUS) - K1201 (SUSGND)  
 (50 X DRIVE ASSY)  
 CH2: R2348 (YPSUS) - K2301 (SUSGND)  
 (50 Y DRIVE ASSY)  
 CH3: K3001 (Scan OUT) - K2301 (SUSGND)  
 (50 SCAN A ASSY)  
 V: 100V/div. H: 2msec/div.

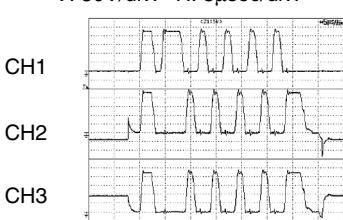

B

- ① Reset Pulse**  
 CH1: R1226 (XPSUS) - K1201 (SUSGND)  
 (50 X DRIVE ASSY)  
 CH2: R2348 (YPSUS) - K2301 (SUSGND)  
 (50 Y DRIVE ASSY)  
 CH3: K3001 (Scan OUT) - K2301 (SUSGND)  
 (50 SCAN A ASSY)  
 V: 100V/div. H: 100μsec/div.

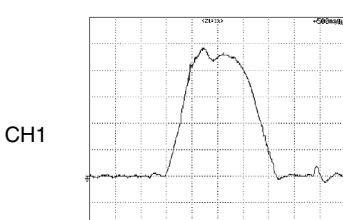

C

- ① Sustain Pulse (1 sub-sub-field)**  
 CH1: R1226 (XPSUS) - K1201 (SUSGND)  
 (50 X DRIVE ASSY)  
 CH2: R2348 (YPSUS) - K2301 (SUSGND)  
 (50 Y DRIVE ASSY)  
 CH3: K3001 (Scan OUT) - K2301 (SUSGND)  
 (50 SCAN A ASSY)  
 V: 50V/div. H: 5μsec/div.

D

- ② Sustain Waveform**  
 CH1: R2348 (YPSUS) - K2301 (SUSGND)  
 (50 Y DRIVE ASSY)  
 V: 50V/div. H: 500nsec/div.

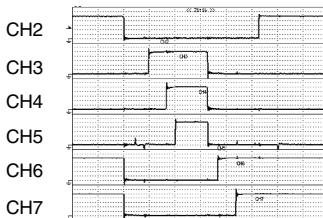

E

## ③ Control Signal (Sustain Waveform Gen.)

- CH2: K2016 (YSUS-G) - K2010 (DGND)  
 CH3: K2025 (YSUS-U1) - K2010 (DGND)  
 CH4: K2022 (YSUS-U2) - K2010 (DGND)  
 CH5: K2026 (YSUS-B) - K2010 (DGND)  
 CH6: K2024 (YSUS-D2) - K2010 (DGND)  
 CH7: K2027 (YSUS-D1) - K2010 (DGND)  
 (50 Y DRIVE ASSY)

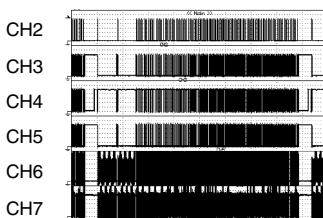

V: 1V/div. H: 500nsec/div.

## ④ Scan Control Signal (1 field, color-bar)

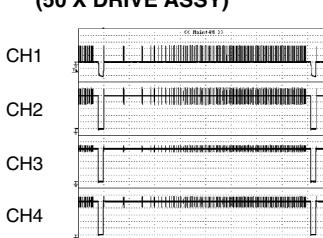

- CH2: K2006 (SI) - K2029 (DGND)  
 CH3: K2009 (OC1) - K2029 (DGND)  
 CH4: K2004 (OC2) - K2029 (DGND)  
 CH5: K2007 (CLR) - K2029 (DGND)  
 CH6: K2003 (CLK2) - K2029 (DGND)  
 CH7: K2008 (LE) - K2029 (DGND)  
 (50 Y DRIVE ASSY)

V: 1V/div. H: 2msec/div.

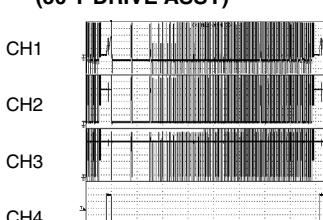

## ⑤ X Drive Pulse Control Signal (color-bar)

- CH1: R1226 (XPSUS) - K2301 (SUSGND)  
 V: 100V/div. H: 2msec/div.  
 CH2: K1016 (XCP-MSK) - K1020 (DGND)  
 CH3: K1015 (XSUS-MSK) - K1020 (DGND)  
 CH4: K1014 (XNR-D) - K1020 (DGND)  
 V: 1V/div. H: 2msec/div.  
 (50 X DRIVE ASSY)

## ⑥ Y Drive Pulse Control Signal (color-bar)

- CH1: R2348 (YPSUS) - K2301 (SUSGND)  
 V: 50V/div. H: 2msec/div.  
 CH2: K2015 (YSUS-MSK) - K2010 (DGND)  
 CH3: K2017 (YSOFT-D) - K2010 (DGND)  
 CH4: K2023 (YPR-U) - K2010 (DGND)  
 V: 1V/div. H: 2msec/div.  
 (50 Y DRIVE ASSY)

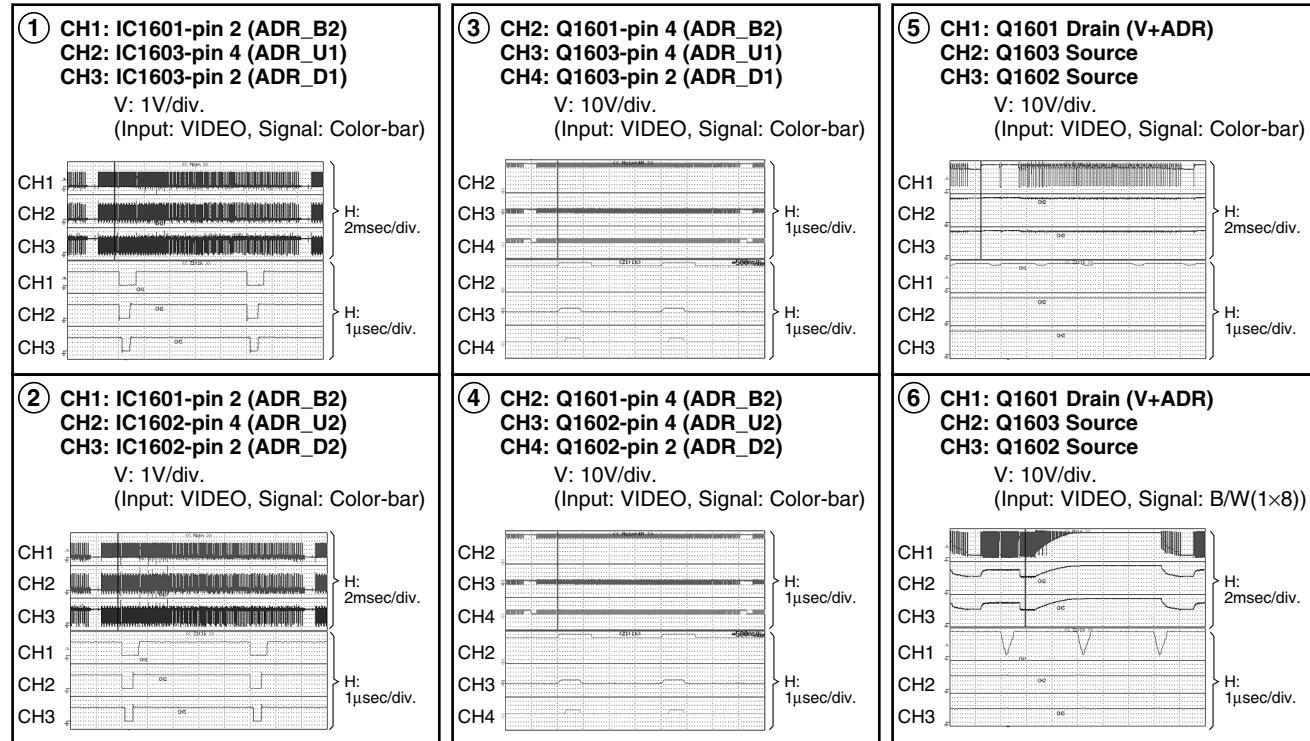

## 50 (43) ADDRESS ASSY

### • ADR RESONANCE BLOCK (VIDEO and PC)

Note:

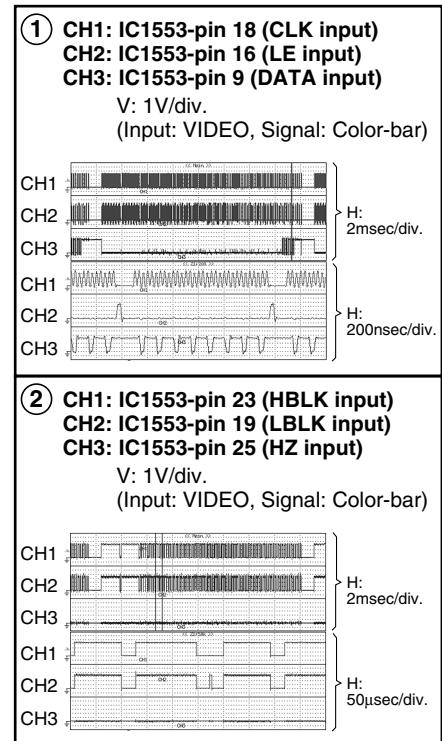

50 (43) \*\*\* Assy means

50 \*\*\* Assy or 43 \*\*\* Assy.

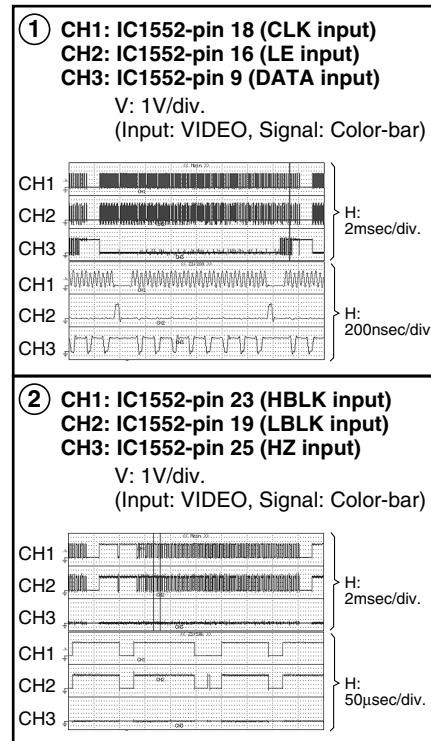

## 50 ADDRESS ASSY

### • ADR LOGIC BLOCK

## 43 ADDRESS ASSY

### • ADR LOGIC BLOCK

### 3.3 VOLTAGES

- Voltages**

DIGITAL VIDEO ASSY

A CN5601 (D1)

No.	Signal Name	I/O	Signal Description	Voltages at NTSC Signal Input

## 5. PCB PARTS LIST

**A** NOTES: • Parts marked by "NSP" are generally unavailable because they are not in our Master Spare Parts List.

• The  mark found on some component parts indicates the importance of the safety factor of the part. Therefore, when replacing, be sure to use parts of identical designation.

• When ordering resistors, first convert resistance values into code form as shown in the following examples.

Ex.1 When there are 2 effective digits (any digit apart from 0), such as 560 ohm and 47k ohm (tolerance is shown by J=5%, and K=10%).

560 Ω → 56 × 10<sup>1</sup> → 561 ..... RD1/4PU5|6|J

47k Ω → 47 × 10<sup>3</sup> → 473 ..... RD1/4PU4|7|3

0.5 Ω → R50 ..... RN2H|R|5|0|K

1 Ω → 1R0 ..... RS1P|R|R|0|K

Ex.2 When there are 3 effective digits (such as in high precision metal film resistors).

5.62k Ω → 562 × 10<sup>1</sup> → 5621 ..... RN1/4PC5|6|2|1|F

# 6. ADJUSTMENT

1

2

3

4

- A 1. At shipment, the unit is adjusted to its best conditions. Normally, it is not necessary to readjust even if an assembly is replaced. If the adjustment is shifted or if it becomes necessary to readjust because of part replacement, etc., perform the adjustment as described below.  
2. Any value changed in Service/Factory mode will be stored in memory as soon as it is changed. Before readjustment, take note of the original values for reference in case you need to restore the original settings.  
3. Use a stable AC power supply.

## 6.1 ADJUSTMENT REQUIRED WHEN THE SET IS REPAIRED OR REPLACED

### ■ When any of the following assemblies is replaced

B POWER SUPPLY Unit	→ No adjustment required
DIGITAL VIDEO Assy	→ Refer to the "7.1.6 BACKUP THE ADJUSTMENT VALUES FOR THE MAIN UNIT."
50 (43) X DRIVE Assy	→ No adjustment required
50 (43) Y DRIVE Assy	→ No adjustment required
AV I/O Assy	→ No adjustment required
C RGB Assy	→ No adjustment required
VIDEO SLOT Assy	→ No adjustment required
Other assemblies	→ No adjustment required
Service Panel	→ Refer to the "6.6 METHOD FOR REPLACING THE SERVICE PANEL ASSY."

### ■ When any part in the following assemblies is replaced

POWER SUPPLY Unit	→ The assembly must be replaced as a unit, and no part replacement is allowed.
DIGITAL VIDEO Assy	→ No adjustment required
50 (43) X DRIVE Assy (IC1101, IC1202)	→ Refer to the "6.2 DRIVE ASSY ADJUSTMENT."
50 (43) Y DRIVE Assy (IC2201, IC2202)	→ Refer to the "6.2 DRIVE ASSY ADJUSTMENT."
E AV I/O Assy	→ Replacement and repair of IC7610 and IC8705 are impossible.
RGB Assy	→ Replacement and repair of IC6001, IC6401, IC6403, IC6601, IC6602 and IC7205 are impossible.
VIDEO SLOT Assy	→ Replacement and repair of IC6107, IC6255, IC6257 and IC7902 are impossible.
Other assemblies	→ No adjustment required

F

## 6.2 DRIVE ASSY ADJUSTMENT

### ■ How to readjust the timing of the control signals when the DRIVE Assy TND506MD is to be replaced

As there is a large difference in delay time among the individual TND506MDs, timing adjustment has been made on each TND506MD in the unit process. If the TND506MD is replaced on the X or Y Drive Assy, readjustment of the timing of the control signals is required.

Assy	Replaced IC	Signal for which Readjustment is Required
X DRIVE	IC1101	X SUS-U2 & XSUS-D2
	IC1102	X SUS-U1 & XSUS-D1
Y DRIVE	IC2201	YSUS-U1 & YSUS-D1
	IC2202	YSUS-U2 & YSUS-D2

#### • How to adjust

Adjust the timing between the startup of the control signals of SUS-U1, SUS-D1, SUS-U2, and SUS-D2 and the startup of the voltage between the gate and the source of the output FET, with the VR resistors that are inserted in the signal line in series. When adjusting, set the unit to Drive OFF mode, and Vsus to 0 V. (For details on how to set to Drive OFF mode, see "7.1.5 Power on/off function for the large-signal system").

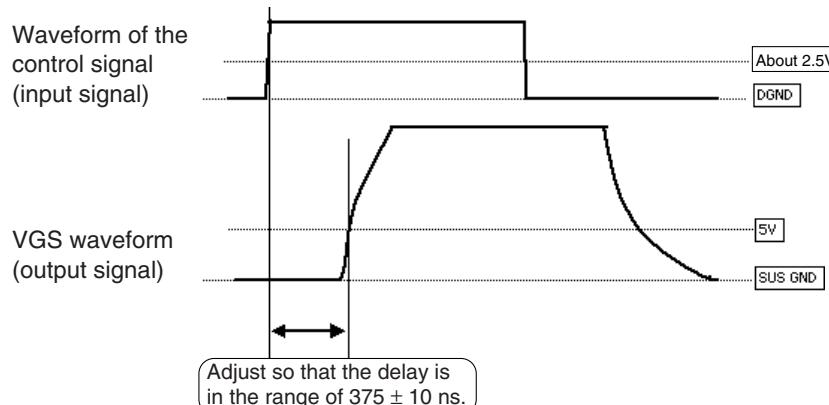

#### • Specified values for adjustment and adjustment points

Signal Name	Set Value for Delay Time	X DRIVE			Y DRIVE		
		Input Signal	Output Signal	Adjustment VR	Input Signal	Output Signal	Adjustment VR
SUS-U1	375ns ± 10ns	K1005	Q1108	VR1103	K2025	Q2202	VR2201
SUS-D1	375ns ± 10ns	K1009	Q1112	VR1104	K2027	Q2205	VR2202
SUS-U2	375ns ± 10ns	K1008	Q1103	VR1101	K2022	Q2208	VR2203
SUS-D2	375ns ± 10ns	K1006	Q1105	VR1102	K2024	Q2212	VR2204

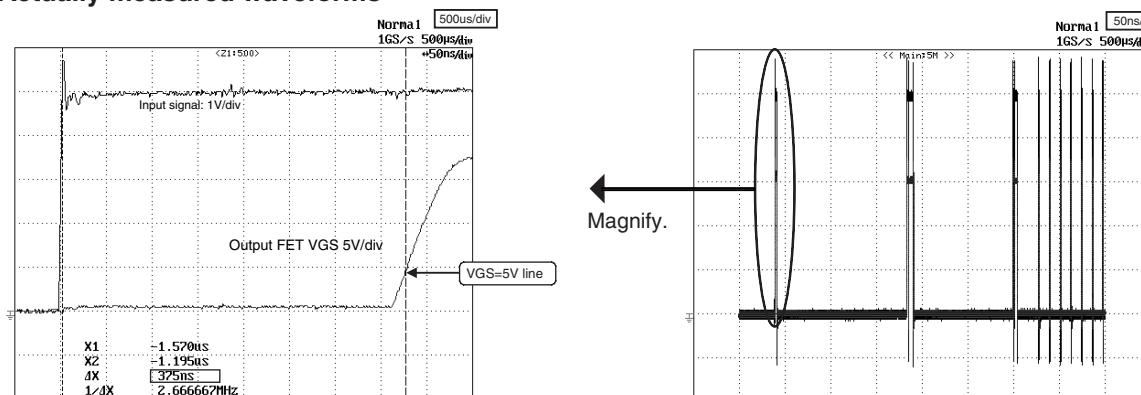

**Note:** Connect GND of the probe with DGND (DGND: X Drive Assy: K1020, Y Drive Assy: K2010) for input signal.

For outputting a signal, obtain a signal from the FET gate terminal.

For adjustment, magnify any pulse in the waveform.

#### • Actually measured waveforms

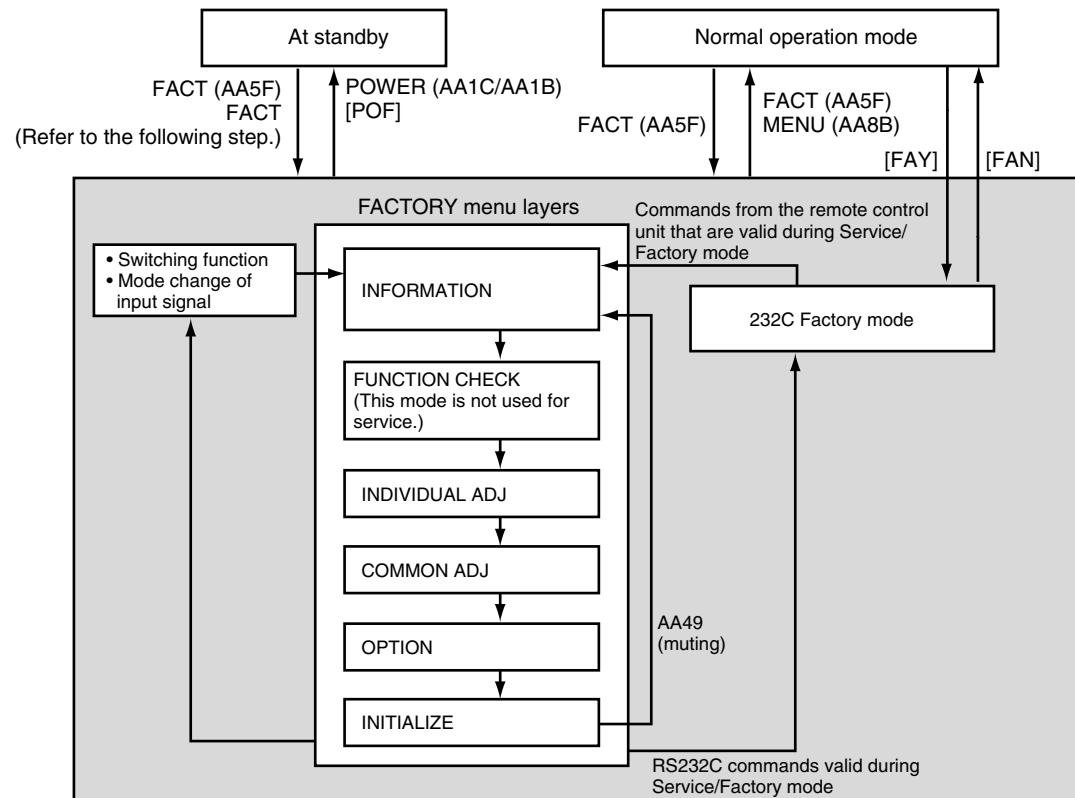

## 6.3 SERVICE FACTORY MODE

Commands in Service/Factory mode must be issued using the remote control unit supplied with the Plasma Display.

A

### State Transition Diagram

B

C

D

E

F

## 6.4 HOW TO ENTER FACTORY MODE

For adjustments, it is necessary to enter Service/Factory mode. There are two ways to enter Service/Factory mode: by using the remote control unit, or by using RS232C commands from your PC.

A

### When the unit is in Standby (STB) Mode

- Please refer to the technical document (Service Knowhow) same as previous model (G4 model)

B

### When the power is on

No.	Method	Procedures
1	Remote control unit	When the conventional Service/Factory code (AA5F) is sent, the unit will enter Service/Factory mode.
2	PC	Connect your PC via its RS232C port, and send the FAY command.

C

D

E

F

## ■ Operation when Service/Factory mode is entered

### A ● Functions whose settings are set to OFF

The settings of the following functions are set to OFF when Service/Factory mode is entered (including when this mode is entered by receiving the FAY command):

- SPLIT (The display will become that of the main input.)
- STILL
- MASK CONTROL
- ORBITER
- POINT ZOOM

### B ● User's setting data

User setting data are set as follows:

- Although user's adjustment data for video/audio adjustment and various adjustment are stored in memory, they are not reflected on the display.
- Although user's adjustment data for display are stored in memory, display adjustment data are reset to the default settings.
- Screen size and sound volume reflect user settings.
- The COLOR DECODING and SIGNAL FORMAT settings are reset to the default values.

### C ● Setting data for Integrator mode

Setting data for Integrator mode will change as follows:

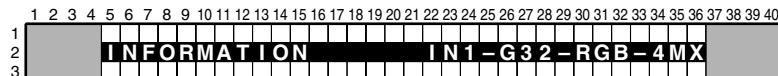

- Although video/audio adjustment data and various data for Integrator mode are stored in memory, they are not reflected on the display.
- Although adjustment data for display in Integrator mode are stored in memory, display adjustment data are reset to the default settings.

## ■ Functions of the keys on the remote control unit in Service/Factory mode

SR Function	Main Function	Description
MUTING	Switching main items	For shifting to the next (top) main item
▼ (DOWN)	Switching subitems	For shifting to the next (downward) subitem
▲ (UP)	Switching subitems	For shifting to the previous (upward) subitem
◀ (LEFT)	Increasing adjustment value	For increasing adjustment value
▶ (RIGHT)	Decreasing adjustment value	For decreasing adjustment value
SET	Shifting layers	For shifting to lower or upper layer
INPUT *	Switching inputs	For switching the input to *
STANDBY/ON	POWER OFF	For turning off the power
FACTORY	Service/Factory OFF	For setting Service/Factory mode to OFF
MENU	Service/Factory OFF	For setting Service/Factory mode to OFF
POINT ZOOM	Matrix change	RGB → YCBR (Component1) → YPBR (Component2)
SPLIT	Main screen/Sub screen change	MAIN → SUB

## ■ Main-item indications

Four parameters are displayed:

### ① Input function

When there is not a video card

Input Functions	On-Screen Display
IN1, IN2	IN1, IN2

When there is a video card

Input Functions	On-Screen Display
IN1 to IN5	IN1 to IN5

### ② SIG mode and screen size

Note: See SIG-Mode Tables. (See next page.)

### ③ Color system and signal type

When there is not a video card

Color System and Signal Type	On-Screen Display
RGB	RGB
Digital video signal	DIG

When there is a video card

Color System and Signal Type	On-Screen Display	
NTSC	Composite input/ S-connector input	NTV/NTS
PAL		PLV/PLS
SECAM		SCV/SCS
4.43NTSC		4NV/4NS
PAL M		PMV/PMS
PAL N		PNV/PNS
BLACK/WHITE		BWV/BWS
Y / Cb / Cr	CBR	
Y / Pb / Pr	PBR	
RGB	RGB	
Digital video signal	DIG	

### ④ Option (Destination, etc.)

Options	On-Screen Display
CMX/MXE	4MX

## ● SIG-Mode Table

A The signal mode is displayed in three characters:

**First character:** Resolution of the input signal (numerics for the video signals, and alphabets for the PC signals)

**Second character:** Grouping of the vertical frequencies

2nd Character	Reference Vertical Frequency	Area	Remarks
-	-	- 20.0	No signal
B		20.0 to 28.0	
C		28.0 to 45.0	
1	50	45.0 to 54.5	
2	56	54.5 to 58.2	
3	60	58.2 to 63.0	
4	66	63.0 to 68.0	
5	70	68.0 to 73.4	
6	For interpolation of 72-Hz	73.4 to 73.9	For distinguishing between 70-Hz or 75-Hz area
7	75	73.9 to 80.0	
8	85	80.0 to 88.5	
?	-	91.5 -	Out of range

B Third character: Selection of the screen size by the user is displayed.

(○: available, ×: not available)

3rd Character	Description on GUI	VIDEO	PC
0	DOT BY DOT	×	○
1	4 : 3	○	○
2	FULL (FULL1080i)	○	○
3	ZOOM	○	×
4	WIDE	○	×
6	CINEMA	○	×
8	FULL (FULL1035i)	○	×
9 *	UNDERSCAN	○	×
:	PARTIAL	×	○

D \* This is displayed only when UNDERSCAN has been set before Service/Factory mode is entered.

In Service/Factory mode, changing from other screen sizes to UNDERSCAN cannot be performed.

## ● SIG-Mode Table

E SIG-Mode table for video signals

The serial number of the product is displayed.

D

**Note :** If the 8th digit from the left in the serial number (\_ \_ \_ CCSS100001JP) is 1, refer to this manual and PDP-504CMX : ORDER NO. ARP3242 for servicing. If it is 0, refer to PDP-504CMX : (ORDER NO. ARP3191, ARP3192), PDP-434CMX : (ORDER NO. ARP3198, ARP3199) for servicing.

F

## **4. PANEL PD**

The log of the past eight power-downs is displayed. Power-down points (first and second) and the hour meter value when the power-down was generated are displayed, with the latest power-down data at the top.

The meanings of indications for power-down points are shown in the table below.

- Power-down information

Type of Power-down	On-Screen Display	Type of Power-down	On-Screen Display
No corresponding item	-----	Power-down of the Y-SUS system	Y-SUS
Power-down of the main power supply system	POWER	Power-down of the address system	ADRS
Power-down of the scanning system	SCAN	Power-down of the X-DRIVE circuitry	X-DRV
Power-down in the path between the scanning system and 5-V power supply	SCN-5V	Power-down of the X-DC/DC converter	X-DCDC
Power-down of the Y-Drive system	Y-DRV	Power-down of the X-SUS system	X-SUS
Power-down of the Y-DC/DC converter	Y-DCDC	Power-down of the driving IC power supply system	D-DCDC
PD which cannot be specified	UNKNOWN	Drive stop PD	-----

\*1: If an activated protection circuit could not be identified after the power-down, it is treated as an unidentifiable power-down (UNKNOWN).

16																																									

The log of the past eight shutdowns is displayed. Shutdown points and the hour meter value when the shutdown was generated are displayed, with the latest shutdown data at the top.

The meanings of indications for shutdown points are shown in the table below.

### • Panel shutdown information

No.	Type of Shutdown	On-Screen Display (MAIN)	Subcategory
1	Abnormality in IC4 communication	IC4	
2	Abnormality in module microcomputer IIC communication	MD-IIC	Exists.
3	DIGITAL-DCDC power decrease	RST2	
4	Abnormality in panel temperature	TEMP1	
5	Short-circuiting of the speakers	AUDIO	
6	Abnormality in module microcomputer communication	MODULE	
7	Abnormality in three-wire serial communication of the main microcomputer	MA-SRL	Exists.
8	Abnormality in main microcomputer IIC communication	MA-IIC	Exists.
9	Abnormality in main microcomputer communication	MAIN	
10	FAN stopped	FAN	
11	Abnormality in unit temperature	TEMP	Exists.
12	Abnormality in the ASIC power on the main microcomputer side	M-DCDC	
13	Other failures	ETC	Exists.

### • Subcategory information

No.	Type of Shutdown	Subcategory
2	MD-IIC	EEPROM4K, EROM2K
7	MA-SRL	IF microcomputer, IC2, IC3
8	MA-IIC	MA-EEP, IC1-V, IC1-Y, AD-M, AD-S, SL-EEP, IC6/1, IC6/2, VOLIC
11	TEMP	INSIDE/AIR (INSIDE = TEMP2/AIR = TEMP3)
13	ETC	RLS, VCC-D1, VCC-D2

## 6. TEMPERATURE

1	2	3	4	5	6	7	8	9	10	11	12	13	14	15	16	17	18	19	20	21	22	23	24	25	26	27	28	29	30	31	32	33	34	35	36	37	38	39	40
1	INFORMATION												IN 1 - G3 2 - RGB - 4 MX

9																																							
0	FAN	:	125																																				
1																																							
2																																							
3																																							
4																																							
5																																							
6																																							

Data from each temperature sensor and the fan output value are displayed:

- Temperature sensors [ °C ]
    - PANEL: Sensor temperature of a panel part (Reference value)
    - INSIDE: Temperature inside the unit (Reference value)
    - AIR: Ambient temperature around the unit (Reference value)

- Fan output: Fan output data

To update the temperature values or fan output data, use the [**[**] or [**]**] key.

7 HOUR METER

The image shows a digital display with a grid pattern. At the top, there is a row of numbers from 1 to 40. Below this, the text "INFORMATION HOUR METER" is displayed in two lines. Further down, the text "00151H21M" is shown. The bottom half of the display is a blank grid.

The cumulative power-on time is displayed.

## **8. PULSE METER**

1	2	3	4	5	6	7	8	9	10	11	12	13	14	15	16	17	18	19	20	21	22	23	24	25	26	27	28	29	30	31	32	33	34	35	36	37	38	39	40

The cumulative number of times the unit was turned on is displayed.

## 10. BACKUP EEPROM

When the DIGITAL VIDEO Assy is to be replaced, the adjustment values in it are temporarily stored in the backup ROM then are written on the new Assy after replacement. (Refer to the "7.1.6 BACKUP THE ADJUSTMENT VALUES FOR THE MAIN UNIT".)

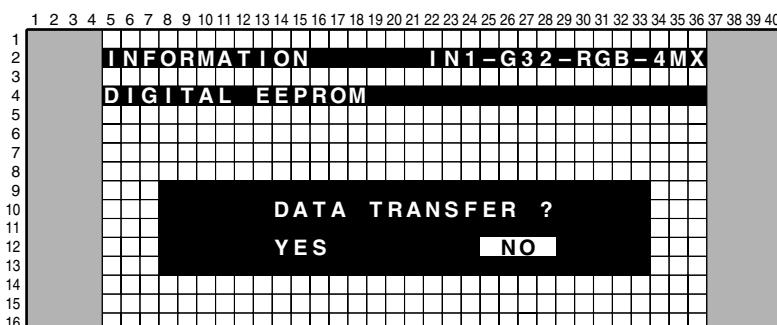

- ① Check if adjustment has been made on the DIGITAL VIDEO Assy or not (i.e., in the state of a new service part), and if the data on any adjustment values are retained in the backup ROM or not.

- ADJUST: OK (DIGITAL VIDEO Assy adjusted)  
NG (DIGITAL VIDEO Assy not adjusted)
- BACKUP: OK (Adjustment data retained in the backup ROM)  
NG (Adjustment data not retained in the backup ROM)

- ② Downloading the data for the DIGITAL VIDEO Assy from the backup ROM

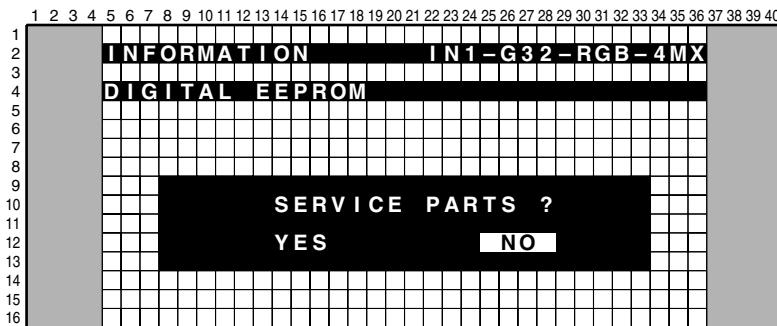

- Press the SET key while display ① above is displayed, and the following display will appear.

- Move the cursor to YES and press the SET key.  
The data in the backup ROM are copy to the DIGITAL VIDEO Assy.  
(When a new DIGITAL VIDEO Assy has been mounted, it now has the adjustment data suited for the panel.)
- Move the cursor to NO, and press the SET key.  
Copy of the data to the DIGITAL VIDEO Assy will not be executed.

- ③ Clearing the data in the ROM of the DIGITAL VIDEO Assy

- When YES or NO is selected while display ② above is displayed, the following display will appear.

- Move the cursor to YES and press the SET key.  
The data in the ROM of the DIGITAL VIDEO Assy are cleared, and the Assy has no specific adjustment data.
- Move the cursor to NO and press the SET key. The data in the ROM of the DIGITAL VIDEO Assy are not cleared.  
When YES selected on display ② and the data were copy, select NO on this display.

**Note:** When YES or NO is selected on display ③ above, the display returns to that of ① above.

## Adjustment of corresponding route unevenness

Basically, only replacement of service parts is required, and adjustment is not required.

No.	Command	Adjustment Parameter Name in Factory	Function
1	VSG	CVY GAIN	IC1 MAIN GAIN adjustment (switching routes with the SWM [main] and SWS [sub] commands)
2	VSO	CVY OFFSET	IC1 MAIN OFFSET adjustment (switching routes with the SWM [main] and SWS [sub] commands)
3	RYG	RY GAIN	AD R GAIN adjustment (correction in differences between component- and RGB-system signals)
4	GYG	GY GAIN	AD G GAIN adjustment (correction in differences between component- and RGB-system signals)
5	BYG	BY GAIN	AD B GAIN adjustment (correction in differences between component- and RGB-system signals)
6	ADC	AD MAIN GAIN	AD MAIN RGB GAIN adjustment (for main screen)
7	MRG	AD MAIN RY GAIN	AD MAIN RY GAIN adjustment (for main screen)
8	MGG	AD MAIN GY GAIN	AD MAIN GY GAIN adjustment (for main screen)
9	MBG	AD MAIN BY GAIN	AD MAIN BY GAIN adjustment (for main screen)
10	MRO	AD MAIN RY OFS	AD MAIN RY OFFSET adjustment (for main screen)
11	MGO	AD MAIN GY OFS	AD MAIN GY OFFSET adjustment (for main screen)
12	MBO	AD MAIN BY OFS	AD MAIN BY OFFSET adjustment (for main screen)
13	SRG	AD SUB RY GAIN	AD SUB RY GAIN adjustment (for sub screen)
14	SGG	AD SUB GY GAIN	AD SUB GY GAIN adjustment (for sub screen)
15	SBG	AD SUB BY GAIN	AD SUB BY GAIN adjustment (for sub screen)
16	SRO	AD SUB RY OFS	AD SUB RY OFFSET adjustment (for sub screen)
17	SGO	AD SUB GY OFS	AD SUB GY OFFSET adjustment (for sub screen)
18	SBO	AD SUB BY OFS	AD SUB BY OFFSET adjustment (for sub screen)

## Reference: Commands for adjustment of differences in signals and memory cells used for storing adjustment values

- Basically no adjustment is required for the Service Assy, as it is properly adjusted before shipment.

### Adjustment values to be stored in the EEPROM of the AV I/O (INDIVIDUAL mode)

Adjustment values differ depending on the input function, input signal format, and main/sub screen.

Input and Signal Format	Commands for Adjustment	
	Route for the Main Screen	Route for the Sub Screen
INPUT1 (RGB)	RYG GYG BYG	RYG GYG BYG
INPUT1 (Color difference)	RYG GYG BYG	RYG GYG BYG

- Four adjustment tables are provided here, depending on the input function, input signal format, and main/sub screen.
- No adjustment is required for INPUT 2, which is of DVI (digital video interface) standards.

### Adjustment values to be stored in the EEPROM of the PDA-5003 or PDA-5004

Adjustment values differ depending on the input function and main/sub screen.

Input and Signal Format	Commands for Adjustment	
	Route for the Main Screen	Route for the Sub Screen
INPUT3 (Y/C)	VSG VSO	RYG GYG BYG
INPUT4 (Comp. V)	VSG VSO	RYG GYG BYG
INPUT5 (Y/C)	RYG GYG BYG	RYG GYG BYG
INPUT5 (Color difference)	RYG GYG BYG	RYG GYG BYG

- Eight adjustment tables are provided here, depending on the input function and main/sub screen.

### Adjustment values to be stored in the EEPROM of the RGB (COMMON mode)

Adjustment values differ depending on the signal resolution, input signal format, and main/sub screen.

**Note:** No adjustment is required for DVI input or signals converted to digital signals by IC1.

#### [Main adjustment 1]

Main A/D adjustments for R, G, and B individually (COMMON-RGB mode)

Input and Signal Format	Commands for Adjustment		Conditions for the Tables to be Switched
525i (RGB)	MRG MGG MBG	MRO MGO MBO	Video RGB signals (excl. 1125p signals)
525i (Color difference)	MRG MGG MBG	MRO MGO MBO	Video color-difference signals (excl. 1125p signals)
1080p (RGB)	MRG MGG MBG	MRO MGO MBO	All PC signals and 1125p RGB signals
1080p (Color difference)	MRG MGG MBG	MRO MGO MBO	1125p color-difference signals

- For adjustment according to the above tables, input corresponding signals to INPUT 5 to change the RGB/color-difference signal setting then perform adjustment.
- Four adjustment tables are provided here, depending on the signal resolution, input signal format, and main/sub screen.

#### [Sub adjustment 1]

Main A/D adjustments for R, G, and B individually (COMMON-RGB 1 mode)

Input and Signal Format	Commands for Adjustment		Conditions for the Tables to be Switched
RGB	SRG SGG SBG	SRO SGO SBO	All R, G, and B signals
Color difference	SRG SGG SBG	SRO SGO SBO	All color-difference signals

- For adjustment according to the above tables, input video signals to INPUT 5 to switch to the route for sub input and to change the RGB/color-difference signal setting then perform adjustment.
- Two adjustment tables are provided here, depending on the signal format.

#### [Main adjustment 2]

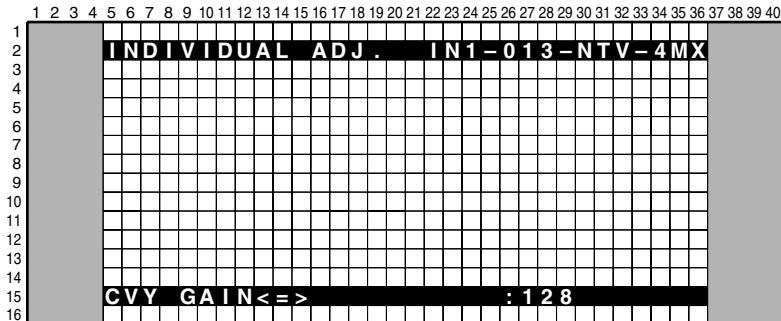

Main A/D adjustments for all R, G, and B simultaneously (COMMON-RGB 2 mode)

Input and Signal Format	Commands for Adjustment		Conditions for the Tables to be Switched
RGB	ADC		All R, G, and B signals
Color difference	ADC		All color-difference signals

- For adjustment according to the above tables, input video signals to INPUT 5 to switch to the route for main input and to change the RGB/color-difference signal setting then perform adjustment.
- A contrast gain commits this adjustment command simultaneously three colors.
- Two adjustment tables are provided here, depending on the signal format.

## INDIVIDUAL ADJ. mode

A

B

Each time the ▲ or ▼ key is pressed, the individual adjustment items are changed, as follows:

No.	Corresponding 232C Command	Function/Display	Content	Adjustable Range	Remarks
1	VSG	CVY GAIN<=> : ***	MICHAEL (IC6255) input GAIN adj.	064 to 191	Select a route with the command SWM (main) and the command SWS (sub).
2	VSO	CVY OFFSET<=> : ***	MICHAEL (IC6255) input OFFSET adj.	064 to 191	
3	RYG	RY GAIN<=> : ***	AD (IC6001 or IC6602) R input GAIN adj.	000 to 255	The memory tables for the RGB and component systems are separate, and are switchable with the command MCD.
4	GYG	GY GAIN<=> : ***	AD (IC6001 or IC6602) G input GAIN adj.	000 to 255	
5	BYG	BY GAIN<=> : ***	AD (IC6001 or IC6602) B input GAIN adj.	000 to 255	

"\*\*\*" in the table above represents the adjustment value.

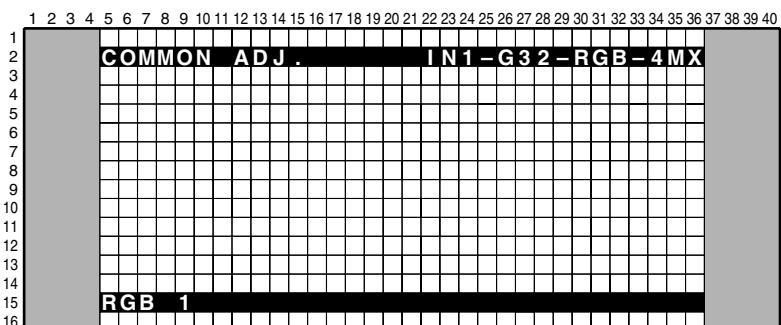

The value of each subitem can be changed using the ▲ or ▼ key.

C

**Note:** The differences in signals for the main and sublevel screens from the AV/IO Assy are compensated, and the compensation data are stored in the EEPROM (IC8705) for each screen.

## COMMON ADJ. mode

D

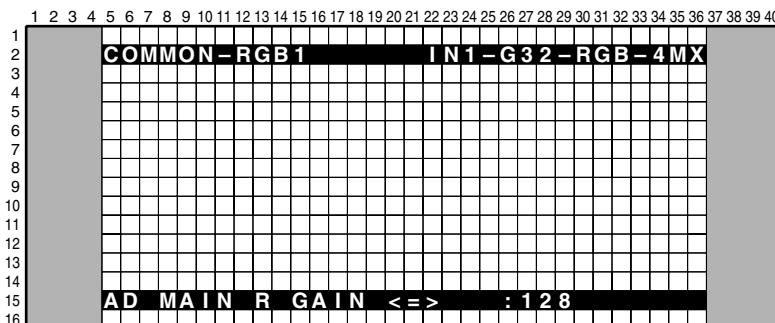

Each time the ▲ or ▼ key is pressed, the subitems are changed, as follows:

- RGB1(+): Adjustment of a video card and the RGB Assy
- RGB2(+): Adjustment of the RGB Assy
- PANEL1(+): Adjustment items related to the drive (common to the unit)
- PANEL2(+): Adjustment items related to the drive (dependent on signals)

Each time the SET key is pressed, items grouped under the subitem are selected one by one.

F

## 1. COMMON-RGB1

Each time the ▲ or ▼ key is pressed, the subitems are changed, as follows:

### When the main input is selected

No.	Corresponding 232C Command	Function/Display	Content	Adjustable Range	Remarks
1	MRG	AD MAIN R GAIN <=> : ***	AD (IC6001) MAIN R GAIN adj. (for main screen)	000 to 255	
2	MGG	AD MAIN G GAIN <=> : ***	AD (IC6001) MAIN G GAIN adj. (for main screen)	000 to 255	
3	MBG	AD MAIN B GAIN <=> : ***	AD (IC6001) MAIN B GAIN adj. (for main screen)	000 to 255	
4	MRO	AD MAIN R OFFSET <=> : ***	AD (IC6001) MAIN R OFFSET adj. (for main screen)	000 to 255	
5	MGO	AD MAIN G OFFSET <=> : ***	AD (IC6001) MAIN G OFFSET adj. (for main screen)	000 to 255	
6	MBO	AD MAIN B OFFSET <=> : ***	AD (IC6001) MAIN B OFFSET adj. (for main screen)	000 to 255	

### When the sub input is selected

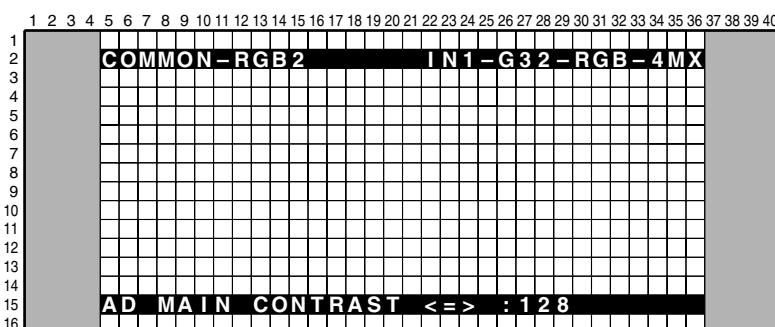

No.	Corresponding 232C Command	Function/Display	Content	Adjustable Range	Remarks
1	SRG	AD SUB R GAIN <=> : ***	AD (IC6602) SUB R GAIN adj. (for sub screen)	000 to 255	
2	SGG	AD SUB G GAIN <=> : ***	AD (IC6602) SUB G GAIN adj. (for sub screen)	000 to 255	
3	SBG	AD SUB B GAIN <=> : ***	AD (IC6602) SUB B GAIN adj. (for sub screen)	000 to 255	
4	SRO	AD SUB R OFFSET <=> : ***	AD (IC6602) SUB R OFFSET adj. (for sub screen)	064 to 191	
5	SGO	AD SUB G OFFSET <=> : ***	AD (IC6602) SUB G OFFSET adj. (for sub screen)	064 to 191	
6	SBO	AD SUB B OFFSET <=> : ***	AD (IC6602) SUB B OFFSET adj. (for sub screen)	064 to 191	

"\*\*\*" in the table above represents the adjustment value.

The value of each subitem can be changed using the ▲ or ▼ key.

**Note:** The differences in signals for the main and sublevel screens from the RGB Assy are compensated, and the compensation data are stored in the EEPROM (IC7205) for each screen.

## 2. COMMON-RGB 2

"\*\*\*" in the table above represents the adjustment value.

The value of each subitem can be changed using the ▲ or ▼ key.

No.	Corresponding 232C Command	Function/Display	Content	Adjustable range	Remarks
1	ADC	AD MAIN CONTRAST <=> : ***	AD (IC6001) MAIN RGB GAIN adj. (for main screen)	000 to 255

11	VSU	VLT-SUS <=> : ***	SUS voltage adjustment	000 to 255
12	VOF	VLT-OFS <=> : ***	OFFSET voltage adjustment	000 to 255

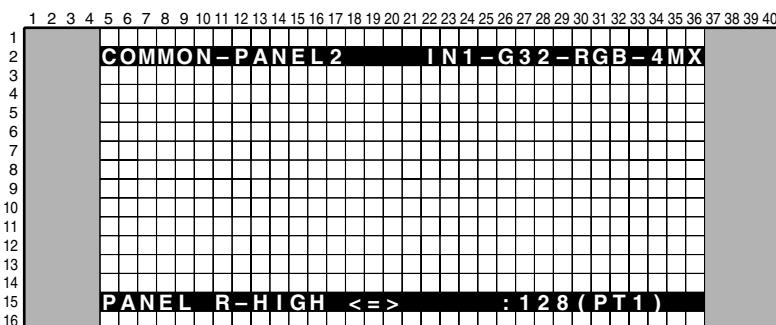

"\*\*\*" in the table above represents the adjustment value.

The value of each subitem can be changed using the ▲ or ▼ key.

#### Notes:

- Adjustments No. 1 to No. 10 above are not normally required, unless so instructed by Service Information, etc.
- Readjustment of values for No. 11 [VSU] and No. 12 [VOF] are required when the service panel is replaced.

#### **4. COMMON-PANEL2**

Each time the ▲ or ▼ key is pressed, the subitems are changed, as follows:

No.	Corresponding 232C Command	Function/Display	Content	Adjustable Range
1	PRH	PANEL R HIGH <=> : *** (PTO)	Panel W/B R-HIGH adjustment	000 to 511
2	PGH	PANEL G HIGH <=> : *** (PTO)	Panel W/B G-HIGH adjustment	000 to 511
3	PBH	PANEL B HIGH <=> : *** (PTO)	Panel W/B B-HIGH adjustment	000 to 511
4	PRL	PANEL R LOW <=> : *** (PTO)	Panel W/B R-LOW adjustment	000 to 999
5	PGL	PANEL G LOW <=> : *** (PTO)	Panel W/B G-LOW adjustment	000 to 999
6	PBL	PANEL B LOW <=> : *** (PTO)	Panel W/B B-LOW adjustment	000 to 999
7	ABL	ABL LEVEL <=> : *** (ABx)	Power consumption adjustment	000 to 999

"\*\*\*" in the table above represents the adjustment value.

The value of each subitem can be changed using the ◀ or ▶ key.

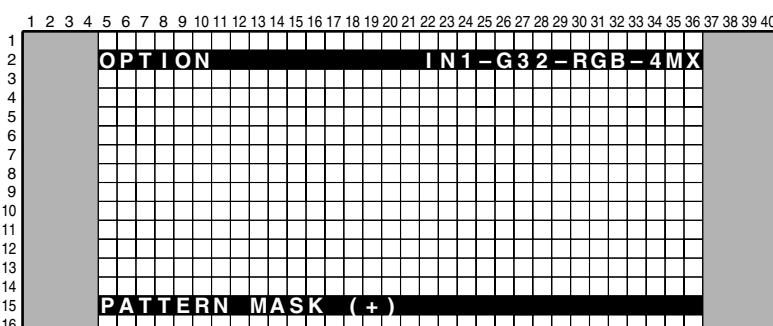

**Note:**

- White balance adjustment.(From No.1 to No.6). (Refer to 136 pages of the " [W/B-adjustment procedures]"")
  - Adjustments No. 7: [ABL] above are not normally required, unless so instructed by Service Information, etc.

"(PTO)" and "(ABx)" in the table above represent the following:

<b>Indication</b>	<b>Table</b>	<b>Indication</b>	<b>Table</b>
PT1	For PC and NTSC	AB1	For 60Hz and 75Hz video
PT2	For PAL, For PC (48Hz)	AB2	For 50Hz video, For 48Hz PC
		AB3	For PC

## **OPTION mode**

Select the main item "OPTION" using the MUTE key then select the subitems shown in the table below using the ▲ or ▼ key.

No.	Function/Display	Content	Remarks
1	PATTERN MASK (+)	For selecting Pattern mask of IC4	A lower layer exists.
2	FULL MASK (+)	For selecting raster mask of IC4	A lower layer exists.
3	DYNAMIC RANGE	ON ⇄ OFF	The last setting is not stored in memory (initial setting: ON).
4	EDID WRITE MODE	DISABLE ⇄ ENABLE	The last setting is not stored in memory (initial setting: DISABLE).
5	INTEGRATOR MODE	DISABLE ⇄ ENABLE	Initial setting: ENABLE

**Note:**

- For PATTERN MASK (+) and FULL MASK (+), press the SET key to switch to the lower layer.
  - Adjustments No. 3 to 5 above are not required for servicing.

## 1. PATTERN MASK

## 2. FULL MASK

A

B

To select the mask frequency, use the **<** or **>** key.

To select the mask pattern, use the **▲** or **▼** key.

## Mask Frequency

No.	Corresponding RS-232C Command	Function/Display	Content
1	F48	V48	Video 48-Hz sequence
2	F50	V50	Video 50-Hz sequence
3	F60	V60 (initial value)	Video 60-Hz sequence
4	F61	P60	PC 60-Hz sequence
5	F70	P70	PC 70-Hz sequence
6	F72	V72	Video 72-Hz sequence
7	F75	V75	Video 75-Hz sequence

## Pattern Mask

No.	Corresponding RS-232C Command	Function/Display	Content
1	M00	OFF	Mask mode: OFF
2	M01	01	White 0 to 100%
3	M02	02	Aging mask
4	M03	03	Aging mask (detection of still picture: OFF)
5	M10	10	H RAMP1
6	M11	11	H RAMP2
7	M12	12	H RAMP3
8	M13	13	H RAMP4
9	M14	14	V RAMP
10	M15	15	H/V RAMP
11	M20	20	Window0
12	M21	21	Window1
13	M22	22	Window2
14	M23	23	Window3
15	M24	24	Window4
16	M25	25	Window5
17	M26	26	Window6
18	M27	27	Window7
19	M28	28	Window8
20	M29	29	Window9
21	M2E	2E	Wiper for erasing afterimage
22	M30	30	COLOR BAR
23	M31	31	Slanted lines

**Full Mask**

No.	Corresponding RS-232C Command	Function/Display	Content
1	M00	OFF	Mask mode: OFF
2	M51	51	Raster – White
3	M52	52	Raster – Red
4	M53	53	Raster – Green
5	M54	54	Raster – Blue
6	M55	55	Raster – Black
7	M56	56	Raster – Cyan
8	M57	57	Raster – Mazenta
9	M58	58	Raster – Yellow
10	M59	59	Raster – Cyan 274
11	M60	60	Raster – 50 fresh color
12	M61	61	Raster – 50 purple
13	M62	62	Raster – 50 sky blue
14	M63	63	Raster – Red 779
15	M64	64	Raster – Cyan 218
16	M65	65	Raster – Cyan 448
17	M66	66	Raster – 43 fresh color
18	M67	67	Raster – Red 640
19	M68	68	Raster – Mazenta 98
20	M69	69	Raster – 43 sky blue 1
21	M70	70	Raster – 43 sky blue 2
22	M71	71	Raster – 43 purple
23	M72	72	Raster – Blue 960
24	M73	73	Raster – Yellow 512
25	M74	74	Raster – Gray 512

**3. DYNAMIC RANGE**

The setting can be changed using the ▲ or ▼ key.

No.	Corresponding RS-232C Command	Function/Display	Content
1	DYY	ON	DYNAMIC RANGE correction: ON (initial setting)
2	DYN	OFF	DYNAMIC RANGE correction: OFF

**4. EDID WRITE MODE**

The setting can be changed using the ▲ or ▼ key.

No.	Corresponding RS-232C Command	Function/Display	Content
1	EWN	DISABLE	Prohibiting writing EDID data (initial setting)
2	EWY	ENABLE	Enabling writing EDID data

A

B

C

D

E

F

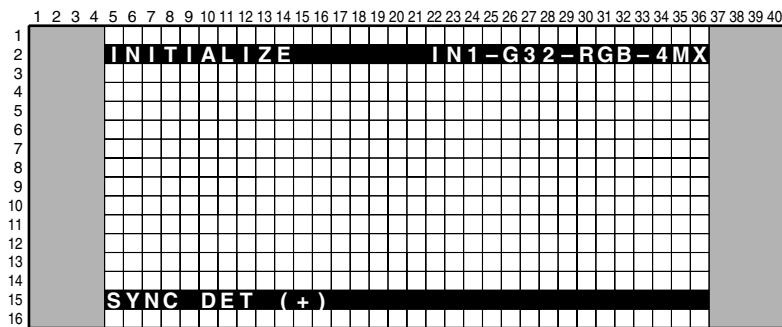

## 5. INTEGRATOR MODE

The setting can be changed using the ▲ or ▼ key.

A

No.	Corresponding RS-232C Command	Function/Display	Content
1	-	ENABLE	Permitting INTEGRATOR MODE (initial setting)
2	-	DISABLE	Prohibiting INTEGRATOR MODE

B

C The subitems can be changed using the ▲ or ▼ key.

C

No.	Corresponding RS-232C Command	Function/Display	Content
1	-	SYNC DET (+)	(Not used)
2	-	DRIVE MODE (+)	(Not used)
3	-	SIDE MASK LEVEL (+)	(Not used)
4	-	PANEL REVCE (+)	(Not used)
5	FST	FINAL SETUP	For initializing user's settings and some factory settings
6	-	C TEMP LOW (+)	For adjusting the user's C TEMP MODE item selected
7	-	C TEMP MID LOW (+)	
8	-	C TEMP STD (+)	
9	-	C TEMP MID HIGH (+)	
10	-	C TEMP HIGH (+)	
11	-	C TEMP MODE2 (+)	(Not used)
12	-	SLOT PROTECT<=>	For setting permission/prohibition of SLOT

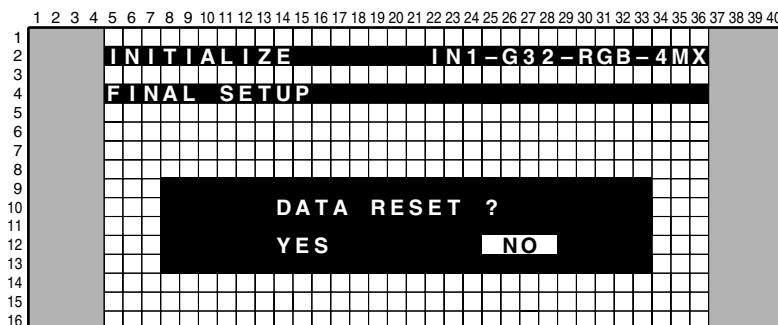

D

Note: Any item followed by (+) has a lower layer to which you can switch using the SET key.

E

F

## 1. FINAL SETUP

Select YES or NO using the ▲ or ▼ key then press the SET key for finalizing the selection:

YES : For executing FINAL SETUP

NO : For not executing FINAL SETUP

B

In FINAL SETUP, the following items can be initialized:

	Item (operation)	Factory setting	Remarks
Normal	Input function (main)	INPUT1	
	Input function (sub)	INPUT2	
	Screen size	VIDEO WIDE or FULL	The screen-size setting will be one of the factory-preset values, based on the results of signal-type detection (SIG-MODE).
		PC DOT BY DOT or FULL or 4:3 or PARTIAL	
	Volume	0	
	Multi screen	OFF	
Menu setting	FUNCTIONAL LOCK	LOCK OFF	
	PICTURE	Default setting for all adjustment items	For each input function
	SCREEN	Default setting for all adjustment items	For each input function
	POWER MANAGEMENT	OFF	For each input function
	AUTO POWER OFF	DISABLE	For each input function
	COLOR TEMP.	MIDDLE	For each input function
	DNR	MIDDLE	For each input function
	MPEG NR	LOW	For each input function
	CTI	ON	For each input function
	PURECINEMA	OFF	For each input function
	COLOR DECODING	COMPONENT 1 or COMPONENT 2	One of the factory-preset signals is output, based on the results of signal-type detection (SIG-MODE) for the input function.
	CLAMP POSITION	AUTO	For each input function
	COLOR SYSTEM	AUTO	For each input function
	SIGNAL FORMAT	VGA or XGA or SXGA or 720-PC *	One of the factory-preset signals is output, based on the results of signal-type detection (SIG-MODE) for the input function.
	LANGUAGE	ENGLISH	
	ENERGY SAVE	STANDARD	
	SCREEN MGT.	OFF / 01H00M	
E	ORBITER	OFF	
	MASK CONTROL	ON	
	AUTO SET UP MODE	INACTIVE	
	AUTO FUNCTION	OFF	
	AUDIO OUT	FIXED	

\* 720-PC selectable only with video card is inserted

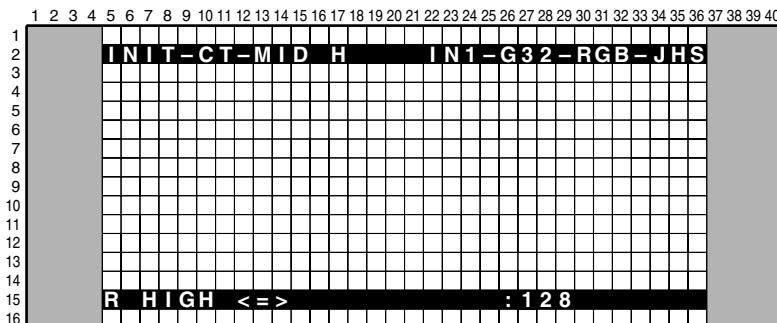

C

D

E

	<b>Item (operation)</b>	<b>Factory setting</b>	<b>Remarks</b>
A Integrator menu setting	PICTURE	Default setting for all adjustment items	For each input function
	WHITE BAL.	Default setting for all adjustment items	For each input function
	SCREEN	Default setting for all adjustment items	For each input function
	GRADATION	VIDEO DRE MID PC GAMMA 2.0	The screen-size setting will be one of the factory-preset values, based on the results of signal-type detection (SIG-MODE).
	BRT. ENHANCE	OFF	For each input function
	SUB VOLUME	20	For each input function
	SCREEN MGT. SET	00H10M/00H30M/WHITE/ 00H10M/INV.1/1	
	SCREEN MASK	OFF	
	SIDE MASK	NORMAL/80/80/80	
	2x2 MODE	OFF/UP LEFT/NORMAL	
B C	MIRROR MODE	OFF	
	BAUD RATE	9600BPS	
	ID NO. SET	--	
	OSD	ON	
	FRONT INDICATOR	ON	
	FAN CONTROL	AUTO	
	COLOR MODE	NORMAL

	FRC	MODE1	
	Factory		
D	PATTERN MASK	OFF	
	FULL MASK	OFF	
	EDIT WRITE MODE	DISABLE	
E	232C	LOUDNESS	OFF
F			

## 2. C TEMP

The indication on the 2nd line in the above display varies according to the subitem selected in the upper layer, as follows:

INIT-CT- \*\*\*\*

\*\*\*\*: LOW/MID L/STD/MID H/HIGH/MOD2

**Notes:** Adjustments are not normally required, unless so instructed by Service Information, etc.

Each time the ▲ or ▼ key is pressed, items grouped under the subitems are changed, as follows:

No.	Function/Display	Content
1	R HIGH <=>	For adjusting R highlight in the selected color temperature mode
2	G HIGH <=>	For adjusting G highlight in the selected color temperature mode
3	B HIGH <=>	For adjusting B highlight in the selected color temperature mode
4	R LOW <=>	For adjusting R lowlight in the selected color temperature mode
5	G LOW <=>	For adjusting G lowlight in the selected color temperature mode
6	B LOW <=>	For adjusting B lowlight in the selected color temperature mode

To change the value of each item, press the ◀ or ▶ key.

## 3. SLOT PROTECT

Option No.	Function/ Display	Operation/Control	Result of Distinction			
			PDA-5002	PDA-5003 PDA-5004	3G-TYPE * (* A - H)	4G-TYPE * (* A - J)
1 (initial setting)	ALL	Permitting all Video card	×	○	○	○
2	P-SLOT	Permitting only the Video card (PDA-5003/ PDA- 5004) made by Pioneer	×	○	×	×

○: Operable according to the setting ×: The corresponding Video card will be treated as an incompatible Video card.

- When a disallowed video card is inserted, the power is not turned on, and the red and green LEDs flash alternatively.
- For details on results of distinction, see "SLOT-DET of the VERSION (2)."

## 6.5 COMMAND DESCRIPTION

### A ■ About GET Command

#### ● Operation description of GET command

#### ■ Conditions under which GET commands are enabled

Most of the GET commands are enabled at any time, regardless of unit's being on/off or in Factory or Normal mode. However, some GET commands must be issued while the power is on to acquire correct data.

#### [Operations]

- Reading out and sending various data stored in the EEPROMs and the RAMs of microcomputers
- Adding a received string of command characters at the beginning of reply data as an echoback
- Decimal notation are converted into ASCII numerics and transmitted.
- CS is 2 bytes, to be interpreted as ASCII codes for 2 hexadecimal digits. These are the low-order 2 bytes of the total value of "receive command + transmission data" (except STX and ETX).

### B ■ Reply data format

STX	Received command (3byte)	Transmission data	...	Transmission data	CS (2byte)	ETX
-----	--------------------------	-------------------	-----	-------------------	------------	-----

Example: [02] GAS 2 ... 0 97 [03]

### C ■ GST: GET STATUS

Order	Data	Size	Remarks
1	Display data	3 byte	See the table below.
2	Power data	3 byte	See the table below. (The third character is for the subinput.)
3	Input function data (main)	3 byte	Input data during GST reception (INPUTs 1 to 5 are indicated as IN 1-5.)
4	Input function data (sub)	3 byte	Subinput data during GST reception (INPUTs 1 to 5 are indicated as IS 1-5.)
5	Screen size data	1 byte	See the table below.
6	Two-screen indication	1 byte	0: OFF (Full-screen) 1: 2-SCREEN 2: PinP (Lower right) 3: PinP (Upper right) 4: PinP (Upper left) 5: PinP (Lower left) 6: PoutP
7	FUNCTIONAL LOCK data	1 byte	0: LOCK OFF 1: BUTTONS LOCK 2: IR LOCK 3: IR&BUTTONS LOCK 4: MEMORY LOCK
8	Dummy data	3 byte	(Three-digit figure)
9	Temperature data 2 (TEMP2)	3 byte	°C (Not.1)
10	Temperature data 3 (TEMP3)	3 byte	°C (Not.2)
11	Serial	15 byte	(Not.4)
12	Dummy data	3 byte	(Three-digit figure)
13	Dummy data	3 byte	
14	HOUR METER data	5 byte	Indicated in hours
15	Dummy data	2 byte	(Checksum)

Display data	1st character 2nd character 3rd character	Data on generation: 4 (Fixation) Data on screen size: 4 (43 inches), 5 (50 inches) Data on destination: M (Fixation)
Power data	1st character 2nd character	Power status and signal status PN (power on & at usually, of signal Input), PL (power on & no input), PO (power on & out of range signal Input), SN (stand by/ on), SW (power management standby), SS (SD and PD standby),
	3rd character	Multi screen features. The sub signal state of a input (see Note. 2) N (at usually, of signal Input), L(no Input), O (out of range in signal Input)
Screen size data	1st character	Numbers used are the same as those that indicate SIG-MODE screen sizes. 0: Dot by Dot PARTIAL, 1: 4:3, 2: FULL or FULL1080i, 3: ZOOM, 4: WIDE, 6: CINEMA, 8: FULL1035i, 9: UNDERSCAN

Not.1: During Standby or immediately after the power is turned on, accurate temperature data cannot be obtained.

To obtain an accurate temperature reading, wait for a few minutes after the power is turned on.

Not.2: During Standby or full-screen display, dummy data (symbols) are output.

Not.3: During Standby or full-screen display, values stored in memory of the unit are output.

Not.4: See "3. SERIAL" on page 97 for details on the serial data.

**GS1:** Returning information on the model and the version of the software

Order	Data	Size
1	Data on the display	3 byte
2	Version of the module microcomputer	4 byte
3	Version of the IC4-MANTA	4 byte
4	Sequence version (50VIDEO)	4 byte
5	Sequence version (50PC)	4 byte
6	Sequence version (43VIDEO)	4 byte
7	Sequence version (43PC)	4 byte
8	Version of the IF microcomputer	4 byte
9	Version of the main microcomputer	4 byte
10	Version of the IC3-MANTA	4 byte
11	Version of the OSD	4 byte
12	Dummy	12 byte

**Breakdown of the data on the display**

Data	Model
MX5	PDP-504CMX series

3	Power monitor 1 (VCC-D2)

**GS2: Status information**

<b>Order</b>	<b>Data</b>	<b>Size</b>	<b>Remarks</b>
1	Notifying of switching to Standby mode	1 byte	1: Successfully switched to Standby mode
2	Whether the unit has already been adjusted or not	1 byte	0: Adjusted, 1: Not adjusted
3	With/without backup of adjustment data	1 byte	0: With backup, 1: Without backup
4	Power-down information	2 byte	1st byte: 1st PD, 2nd byte: 2nd PD
5	Temperature information (TEMP1)	3 byte	000 to 255
6	Abnormality in RST2 (power decrease of the DC-DC converter)	1 byte	
7	IC4 communication failure	1 byte	
8	EEPROM communication failure	1 byte	
9	Failure in audio	1 byte	
10	Communication failure of the volume IC	1 byte	
11	Backup-ROM communication failure	1 byte	
12	Failure in temperature information (TEMP1)	1 byte	
13	Activation of panel protection	1 byte	0: Panel protection not activated, 1: Panel protection being activated
14	(Reservation)	2 byte	* *
15	Accumulated hour meter data cleared ( Note 1)	7 byte	1-5 bytes: Hours, 6-7 bytes: Minutes
16	Hour meter data (clearable) (Note 2)	7 byte	1-5 bytes: Hours, 6-7 bytes: Minutes

\* Ignore the 2-byte checksum at the end.

\* Data to be used for servicing may be item 5 (temperature data) and 15 and 16 (hour meter data).

**Note 1 :** The data are updated each time the hour meter data are cleared. The total value of data items 15 and 16 indicates accumulated power-on time after shipment. Data item 15 cannot be cleared with a command.

**Note 2 :** The hour meter data indicated on the Factory menu are displayed. The data represent accumulated power-on time of the panel after the last clearance of hour meter data. At shipment, the data are reset to 0.

## LIST OF RS-232C COMMAND

A	Command	Operation	Validity of Direct Numeric Input	Lower limit	Upper limit	Remarks
<b>[A]</b>						
	ABL	Adjusting power consumption	<input type="radio"/>	000	255	
	ADC	AD CONTRAST adjustment	<input type="radio"/>	000	255	
	AMN	Audio MUTE OFF				
	AMY	Audio MUTE ON				
	AST	Execution of auto setup				The values for positions are not stored in memory in Factory mode.
<b>[B]</b>						
B	BCP	Transmitting the backup data to the DIGITAL VIDEO Assy				
	BRA	Indicate a current baudrate				
	BRAS01	Setting the UART to 232C (1200 bps)				
	BRAS02	Setting the UART to 232C (2400 bps)				
	BRAS03	Setting the UART to 232C (4800 bps)				
	BRAS04	Setting the UART to 232C (9600 bps)				
	BRAS05	Setting the UART to 232C (19200 bps)				
	BRAS06	Setting the UART to 232C (38400 bps)				
	BYG	Adjusting BY GAIN	<input type="radio"/>	000	255	
<b>[C]</b>						
C	CNG	MR NG INFORMATION CLEAR				
	CPC	Clearing the power-on counter				
	CPD	Clearing power-down information				
<b>[D]</b>						
DIN	DIN	Turning off the on-screen display				Prohibit OSD indication
DIY	DIY	Turning on the on-screen display				While the DIY command is in force, the duration of OSD is unlimited.
DOF	DOF	Erasing the currently displayed indications				If another command is received, an OSD is displayed.
DRF	DRF	Turning off the power for the drive system				Return to the DRN state by turning the power off
DRN	DRN	Turning on the power for the drive system				
DW0	DW0	Decreasing the adjustment value by 10				
DWn	DWn	Decreasing the adjustment value by n (n=1 to 9)				
DWF	DWF	Minimizing the adjustment value				
DYN	DYN	No D-range correction				
DYY	DYY	With D-range correction				
<b>[E]</b>						
EWN	EWN	Prohibiting writing of EDID data				
EWY	EWY	Permitting writing of EDID data				
<b>[F]</b>						
F48	F48	Video 48-Hz sequence				
F50	F50	Video 50-Hz sequence				
F60	F60	Video 60-Hz sequence				
F61	F61	PC 60-Hz sequence				
F70	F70	PC 70-Hz sequence				
F72	F72	Video 72-Hz sequence				
F75	F75	Video 75-Hz sequence				
FAJ	FAJ	Determining the adjustment flag of the DIGITAL VIDEO Assy in "adjustment is completed"				
FAN	FAN	Turning Service Factory mode off				The OSD equivalent to that usually displayed when the power is turned on is displayed.
FAY	FAY	Turning Service Factory mode on				
FCA	FCA	Turning fan roll control to auto				
FCM	FCM	Maximizing the fan roll control				
FST	FST	Executing FINAL SETUP				
FXO	FXO	Selecting audio output fixing				
<b>[G]</b>						
GAJ	GAJ	Obtaining the adjustment values for the panel

## 6.6 METHOD FOR REPLACING THE SERVICE PANEL ASSY

The following adjustments and operations are required when the Panel Assy is replaced for servicing.

**A ■ Adjustments of the Vsus and Vofs voltages**

Input the reference adjustment values that are described on the service panel for the Vsus and Vofs voltages, with the RS232C commands or on the Factory menu.

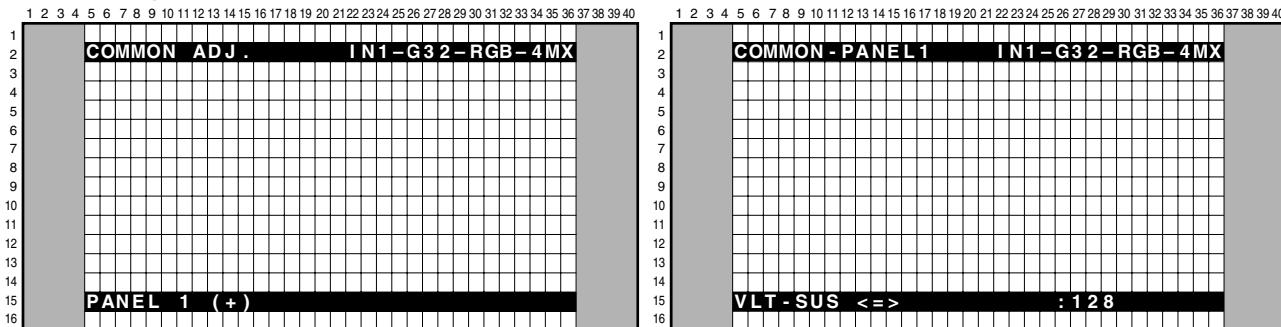

**B • With the RS232C commands**

Input the adjustment values described on the label attached on the rear of the panel:

- Reference adjustment of the Vsus voltage : [VSU\*\*\*] Ex. : [VSU106]
- Reference adjustment of the Vofs voltage : [VOF\*\*\*] Ex. : [VOF128]

**B • On the Factory menu**

Using the MUTE key, select the main item "COMMON ADJ." Select the subitem "PANEL 1" then "VLT-SUS" or "VLT-OFS," using the ▲ or ▼ key and SET key. Enter the value, using the ◀ or ▶ key.

**C ■ Clearing various logs for the panel, such as that for the hour meter**

It is necessary to clear various logs, such as that for the hour meter, to match the driving hours of the panel before and after replacement. Write down the hour-meter data at the time of replacement of the panel on the label attached to the rear of the panel.

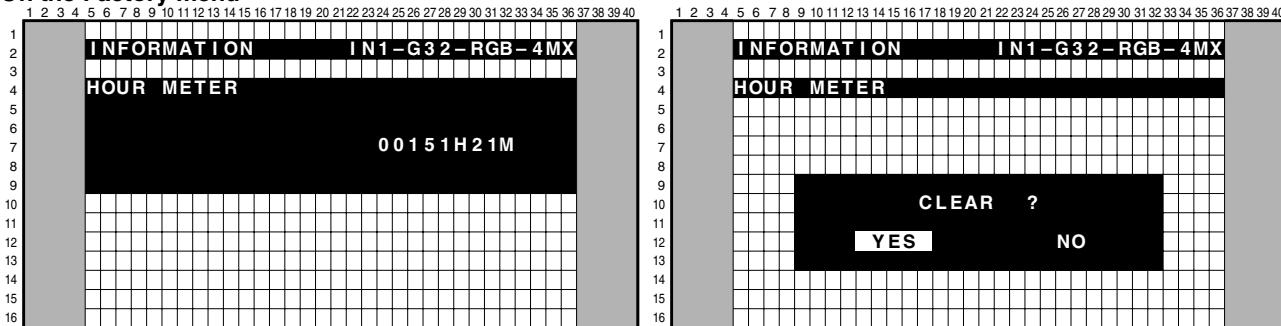

**D Notes:** • For clearing, use the RS232C commands or the Factory menu.

**E • With the RS232C commands**

You can obtain the accumulated power-on time data of the product itself with the "GS2" RS232C command.  
(See "6.5 Command description".)

- 1 For clearing the hour meter (for the panel) : CHM
- 2 For clearing the pulse meter : CPM
- 3 For clearing the shutdown (SD) log : CSD
- 4 For clearing the power-down (PD) log : CPD

**F • On the Factory menu**

Using the MUTE key, select the main item "INFORMATION." Select the subitem "HOUR METER," using the ▲ or ▼ key and SET key. Clear the hour-meter data.

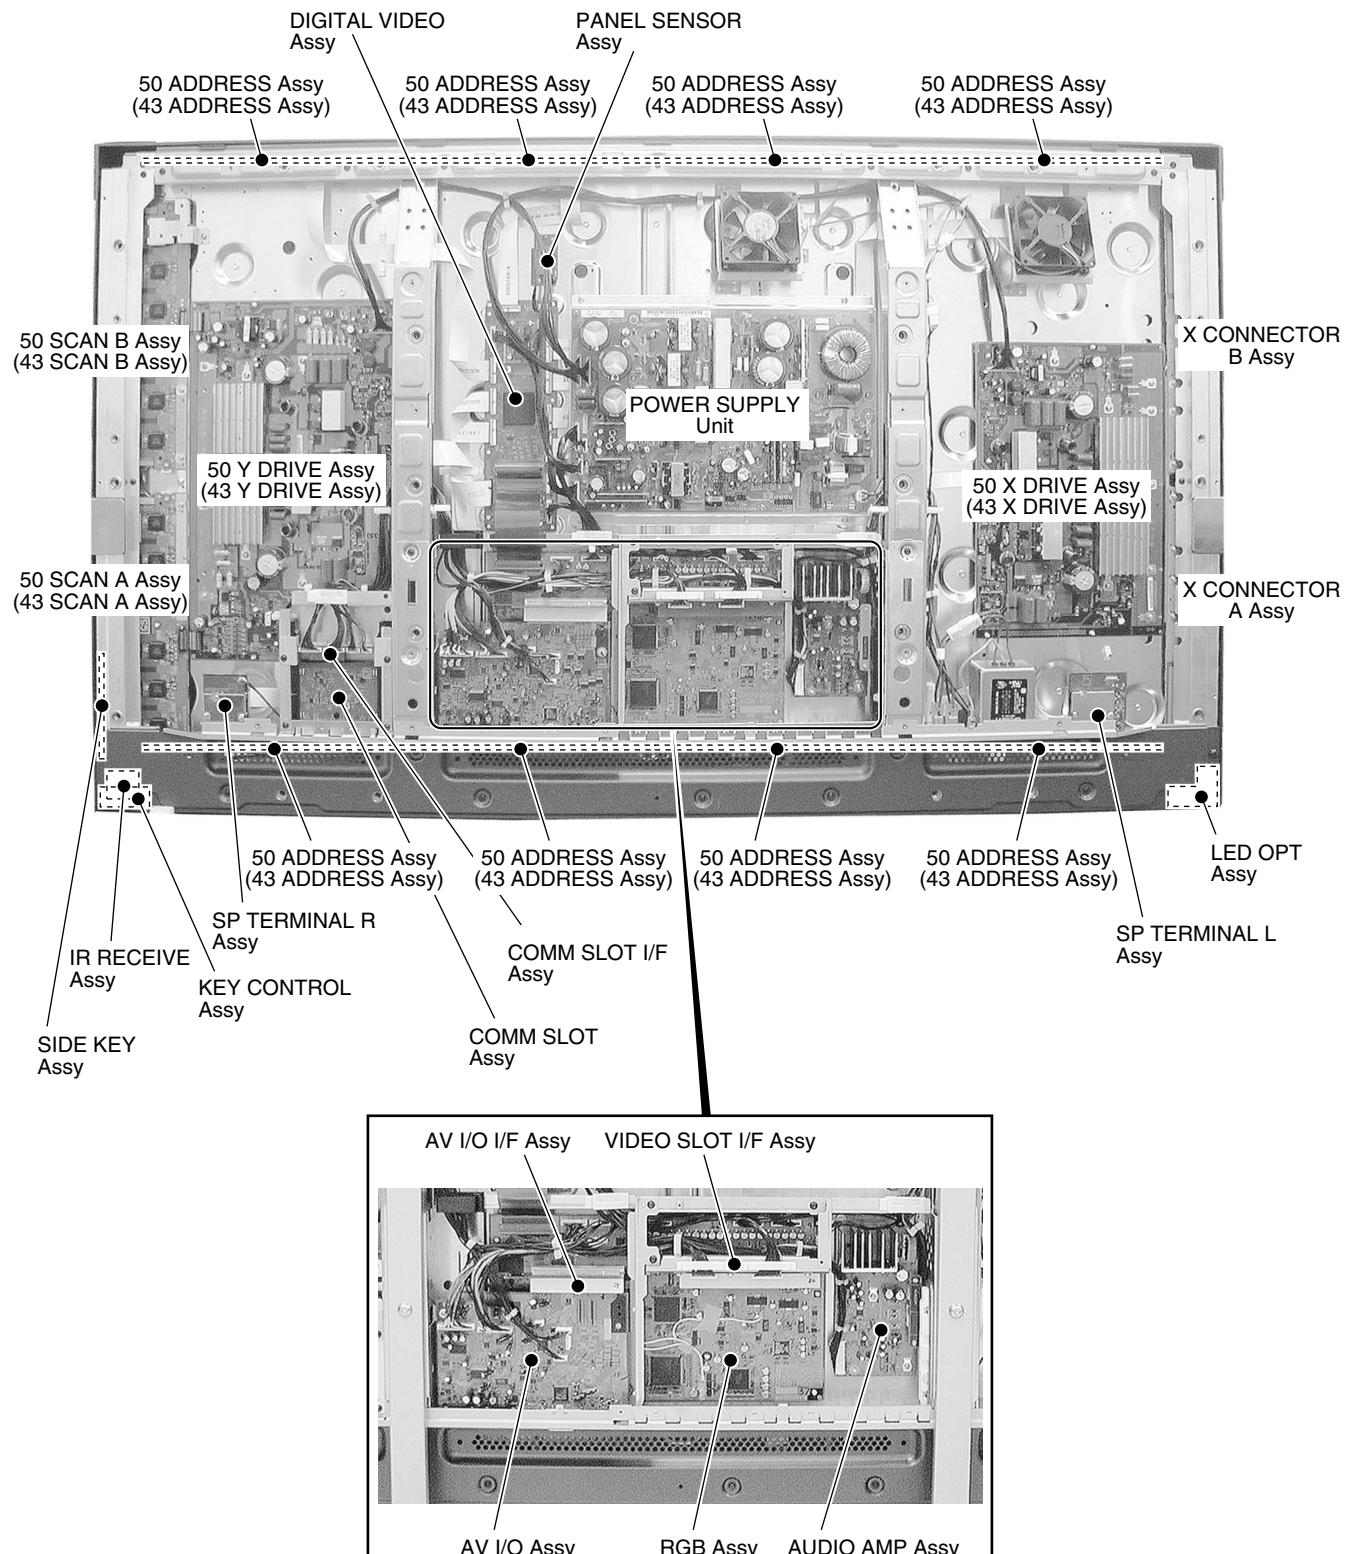

In the same way, select the subitem "PULSE METER," "PANEL SD," or "PANEL PD" under the main item "INFORMATION" then clear the data.

# 7. GENERAL INFORMATION

## 7.1 DIAGNOSIS

### 7.1.1 CONFIGURATION OF THE PC BOARD

**Note :** This illustration is 50 inch model.

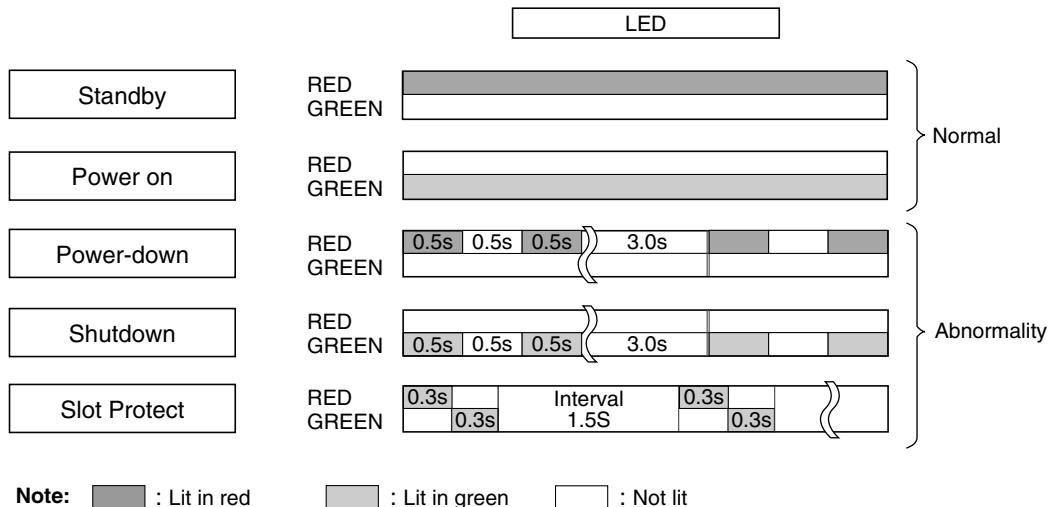

● Rear view

## 7.1.2 DIAGNOSIS FOR SHUTDOWN AND POWER-DOWN BY LED

- Operation statuses indicated by LEDs

A

Note: : Lit in red   : Lit in green   : Not lit

B

C

D

E

F

## • Identification of locations having abnormality by the number of times the LEDs flash

### ■ On Shutdown and power-down

#### Shutdown

- Operation: When the microcomputer detects any abnormality, it forcibly shuts the unit off.
- LED indication: The LED flashes in green.

**Note: The LED flashes regardless of the FRONT INDICATOR setting on the Integrator menu.**

#### Power-down

- Operation: When the unit is in emergency status, a protection circuit is activated, and the power is shut off.
- LED indication: The LED flashes in red.

Category	LED		Content	Unit's Operation	Warning Message
	STB	ON			
SD		Once	Communication failure of the panel-drive IC	Shutdown 3 seconds after warning	Shutdown by circuit failure (01)
		Twice	Communication failure of the module IIC	Shutdown 3 seconds after warning	Shutdown by circuit failure (02)
		3 times	Power decrease of the digital DC-DC converter	Immediate shutdown	
		4 times	Panel having high temperature	Shutdown 30 seconds after warning	Shutdown by warning temperature rise (04)
		5 times	Audio failure	Shutdown 3 seconds after warning	Shutdown by warning speaker failure (05)
		6 times	Communication failure of the module microcomputer	Shutdown 3 seconds after warning	Shutdown by circuit failure (06)
		7 times	Main 3-wire serial communication in failure	Shutdown 3 seconds after warning	Shutdown by circuit failure (07)
		8 times	Communication failure of the main IIC	Shutdown 3 seconds after warning	Shutdown by circuit failure (08)
		9 times	Communication failure of the main microcomputer	Immediate shutdown	
		10 times	Fan in failure	Shutdown 3 seconds after warning	Shutdown by warning fan abnormality (10)
		11 times	Unit having higher temperature	Shutdown 30 seconds after warning	Shutdown by warning temperature rise (11)
		13 times	Main microcomputer ASIC power supply NG	Immediate shutdown	
		14 times	Communication failure of IF-EEPROM	Shutdown 3 seconds after warning	Shutdown by circuit failure (14)
		15 times	Other failure	RLS VCC-D1 VCC-D2	Shutdown 30 seconds after warning
					Shutdown by circuit failure (15)
PD	Once				
	Twice		Power	Immediate power-down	
	3 times		SCAN	Immediate power-down	
	4 times		SCAN-5V	Immediate power-down	
	5 times		Y-DRIVE	Immediate power-down	
	6 times		Y-DCDC	Immediate power-down	
	7 times		Y-SUS	Immediate power-down	
	8 times		ADDRESS	Immediate power-down	
	9 times		X-DRIVE	Immediate power-down	
	10 times		X-DCDC	Immediate power-down	
	11 times		X-SUS	Immediate power-down	
	12 times		DIGITAL-DCDC	Immediate power-down	
	15 times		UNKNOWN (Not identified)*1 Drive processing IC (IC4)*2	Immediate power-down	

\*1: If the unit cannot identify which protection circuit was activated, even if a power-down had been detected, the red LED may flash 15 times.

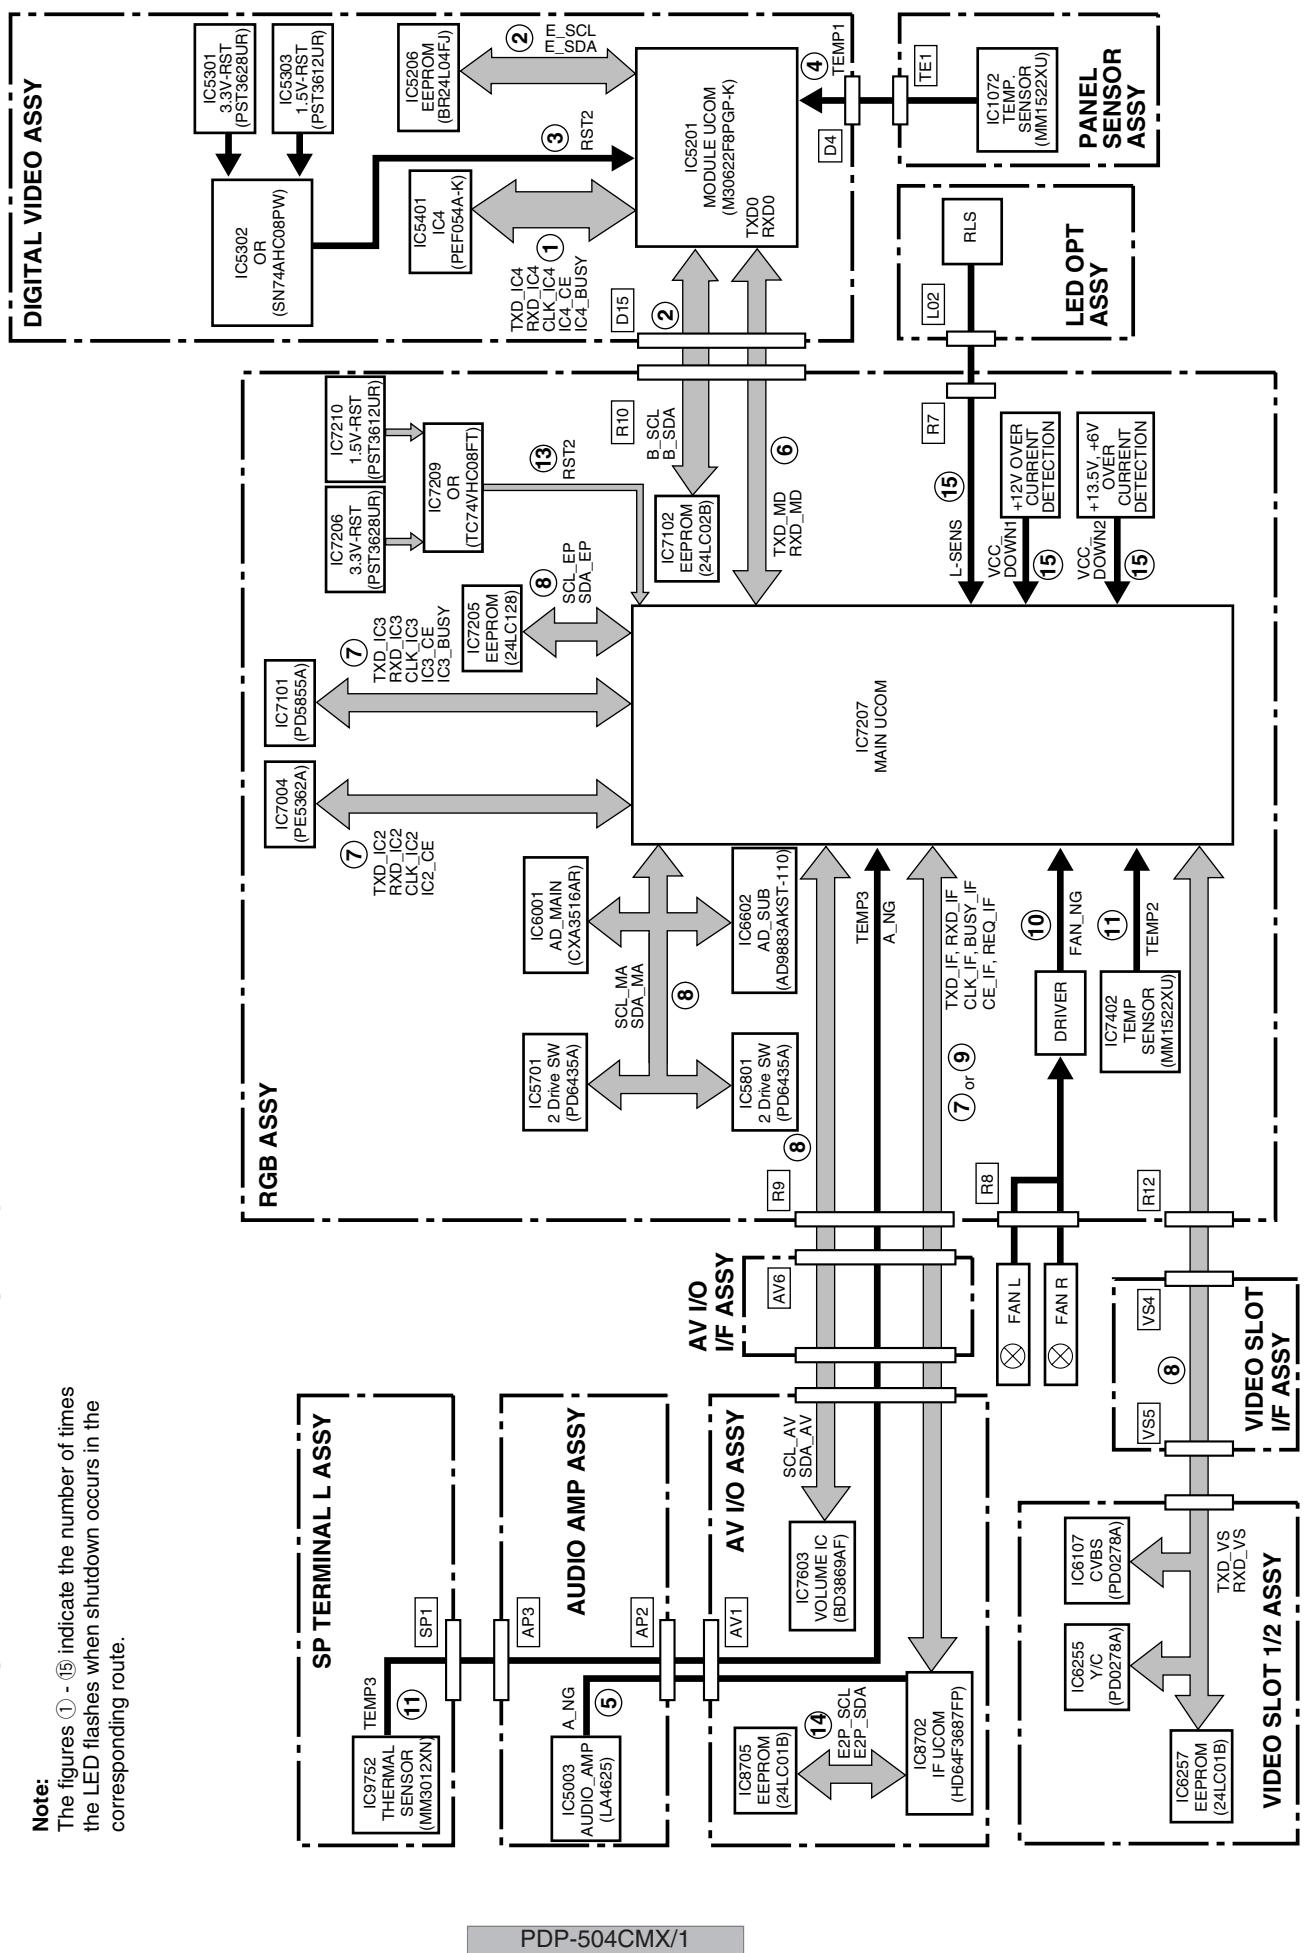

\*2: If 15 times blink of a power-down cannot be specified, the drive processing IC exists.

See "4.PANEL PD" on page 98 and "GPD: Power-down information" on page 116.

## • Block diagram of the shutdown signal system

### Note:

The figures ① - ⑯ indicate the number of times the LED flashes when shutdown occurs in the corresponding route.

## • Diagnosis of shutdown

	SD Circuit in Operation	Defective Assy	Reason for Shutdown	Point to be Checked	Possible Defective Part	Remarks
5	1 Communication failure of the panel-drive IC	DIGITAL VIDEO	Communication failure of IC4 or defective peripheral circuits	IC4 Block, Panel Flash Block	IC5401, IC5305	
	2	DIGITAL VIDEO	Writing failure of IC4			After turning the unit on again, check if the data on the version can be read with the GS1 command.
6	3 Power decrease of DIGITAL-DC-DC	DIGITAL VIDEO	Communication failure of the EEPROM (4k) or defective peripheral circuits	Module Ucom Block	IC5206	
	4 Panel having higher temperature	DIGITAL VIDEO	Communication failure of the EEPROM (2k) or defective peripheral circuits	IC3 Block	IC7102	
7	5 Audio failure	AUDIO AMP	Defective 114-pin FPC	CN400(D15) - CN7101(R10)	ADY1081	Check if the cable is disconnected or not securely connected.
	6 Communication failure of the module microcomputer	DIGITAL VIDEO	Defective DC-DC converter	Digital DD Control Block	U5601	Check if 3.3V, 2.5V, and 1.5V are activated (not short-circuited).
8	7 Serial communication failure of the 3-wire of the main microcomputer	DIGITAL VIDEO	Defective RST IC	Panel Flash Block	IC5301 IC5302 IC5303	
	8 IIC communication failure of the main microcomputer of (Confirm the SD subcategory in the factory menu)	POWER SUPPLY	No startup of 12 V			
9	9	DIGITAL VIDEO	Disconnection of cable	CN5202 - CN1071		
	10	DIGITAL VIDEO	Panel having higher temperature	Surrounding temperature		Temperature detected by a sensor must not exceed 90°C (TEMP1).

		RGB	Defective circuits in the 13.5V and 6.5V systems.			Check for shorts/circuits in the 13.5V and 6.5V systems.

• Diagnosis of abnormalities other than shutdown and power-down

	<b>Symptoms</b>	<b>Defective Assy</b>	<b>Abnormal Summary</b>	<b>Point to be Checked</b>	<b>Possible Defective Part</b>	<b>Remarks</b>
No power (LED unit)			Disconnection of cable	CN7404		Check if the connection between the POWER SUPPLY and RGB assemblies is properly made.
POWER SUPPLY	STB 3.3 V not started			CN7404(A1)-11 pin		
AV I/O	Defective I/F microcomputer			IF Ucom Block	IC8702	Check if the oscillation is normal (X8701 = 32 kHz, X8702 = 9.8 MHz) and if RESEI is set to H (IC8703).
No power (The LED remains lit in red and does not light in green.)	RGB	Defective main microcomputer		Main Ucom Block	IC7207	If communication with the main microcomputer fails approx. 20 seconds after the AC power is on, the main microcomputer may be defective.
Key input not effective		Disconnection of cable		CN4801 - CN9002 CN9001 - CN8702		Check if the cables are not connected or securely connected.
Remote control unit not effective		Disconnection of cable		CN4901 - CN8301		Check if the cable is not connected or securely connected.
IR RECEIVE	Defective IR receiver section	IR		U4901		Check if a pulse is output when the key corresponding to Pin 3 of the CN4901 is pressed.
DIGITAL VIDEO	Defective IC4	IC4 Block		IC5401		Check if an abnormal area in the screen changes when the FPC connected to the address corresponding to the abnormal area is replaced with the one corresponding to the next address.
Abnormal screen (Data of every other dot are abnormal)	ADDRESS			CN7101 - CN5001	ADY1081	Check if the FPC is broken or not securely connected.
		Defective 114-pin FPC

## 7.1.3 PROCESSING AT THE TIME OF ABNORMALITIES

### Fan and temperature sensor

#### ● Circuitry

#### ● Port monitoring specifications

Port Name	Shutdown Name	Assign	Control Microcomputer	Active	Remarks
FAN_NG	FAN	31	Main	Shutdown when the signal becomes high	Disconnection of the fan connector or abnormality in operation of the fan detected
TEMP1	Unit under high temperature	92	Module	Shutdown when the set value is exceeded	Monitoring high temperature of the panel, Drive system temperature compensation
TEMP2	Unit under high temperature	51	Main		Monitoring high temperature of boards
TEMP3	Unit under high temperature	50	Main		Monitoring ambient temperature

## 7.1.4 TEMPERATURE COMPENSATION OF DRIVE SYSTEM VOLTAGE

**Function:** To control the DRIVE-system voltage according to the temperature (Temperature compensation functions such that the voltage is lowered on the lower-temperature side and the voltage becomes higher on the higher-temperature side.)

**Purpose:** For improving the yield by compensating for the temperature characteristics of the panel

**Note:** • Temperature compensation is performed only for the VSUS voltage, and not for the VOFS voltage. This compensation is controlled by the software.  
• Temperature compensation is carried out with the value of TEMP1.

## 7.1.5 POWER ON/OFF FUNCTION FOR THE LARGE-SIGNAL SYSTEM

**Function:** Only the power for the low voltage lines (16 V, 12 V, and 6.5 V) is on, and the power for the high voltage lines (VSUS, VADR) is off.

A

**Usage:**

1. Use when only an operational check for the low voltage lines is required, such as when making repairs.
2. Use when rewriting of a program for each microcomputer is required.

**Methods:**

- 1 Set the slide switch (S5201) on the DIGITAL VIDEO Assy to its upper position ("DRF" is mentioned on the board see Fig. below).

- 2 Send the "DRF" RS232C command to turn the large-signal system off.
- 3 Send the "DRN" RS232C command to turn the large-signal system on.

**Notes:**

- As the unit enters Power-Down and Muting On mode when Methods 1 and 2 are performed, and power-downs other than those caused by the power (PS\_PD) and DC-DC-converter (DIGITAL\_DC-DC) circuits are not activated.
- If the slide switch is set from OFF to ON while the power is on, a power-down will occur. Be sure to turn the power off before switching the slide switch.
- Although the "DRF" RS232C command is enabled during Standby, if the power is turned on then turned off, the unit will return to "DRN" mode.

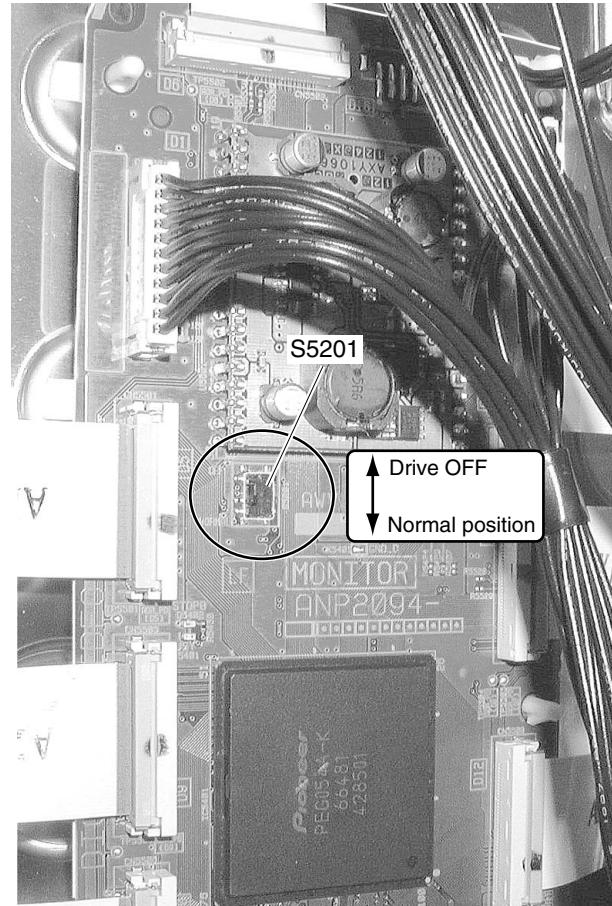

Fig. Drive OFF switch

## 7.1.6 BACKUP THE ADJUSTMENT VALUES FOR THE MAIN UNIT

### ■ Outline

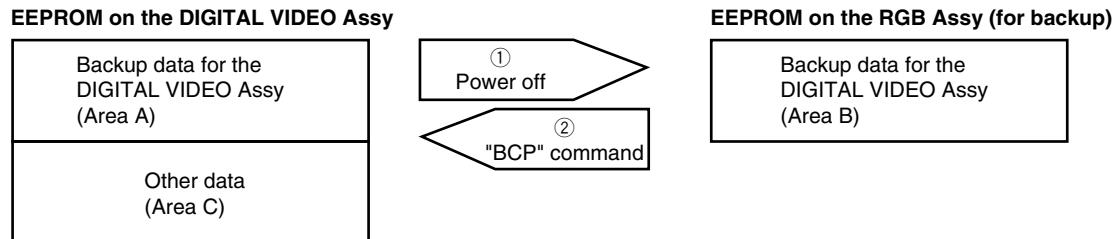

The data on the adjustment values for the main unit are stored in an EEPROM (IC5206, 4 kbytes) on the DIGITAL VIDEO Assy. Part of the data (area A in the figure below) are automatically copied to an EEPROM (IC7102, 2 kbytes) mounted on the RGB Assy for backup. When the DIGITAL VIDEO Assy is replaced, the backup data on the adjustment values for the main unit stored in the RGB Assy can be copied to the new DIGITAL VIDEO Assy, thus enabling you to omit newly performing adjustments on the main unit. The logs for the product (power-down log, etc.) can also be copied.

### ■ Data to be backed up in the digital EEPROM (area A)

- Margin adjustment values (Vsus, Voffset)
- Power upper-limit adjustment value (ABL)
- PANEL white-balance adjustment values  
(PANEL-R HIGH, PANEL-G HIGH, PANEL-B HIGH, PANEL-R LOW, PANEL-G LOW, PANEL-B LOW)
- Drive waveform adjustment values  
(X-SUS-U1, X-SUS-U2, X-SUS-D1, X-SUS-D2, Y-SUS-U1, Y-SUS-U2, Y-SUS-D1, Y-SUS-D2, Y-SUS-D3, Y-SUS-D4)
- Hour meter
- Pulse meter
- Number of times the power has been turned on
- PD/SD logs

### ■ Basic flow of automatic backup

Using a keyword, the data in areas A and B are judged as to whether they have been adjusted or not, then copying is performed.

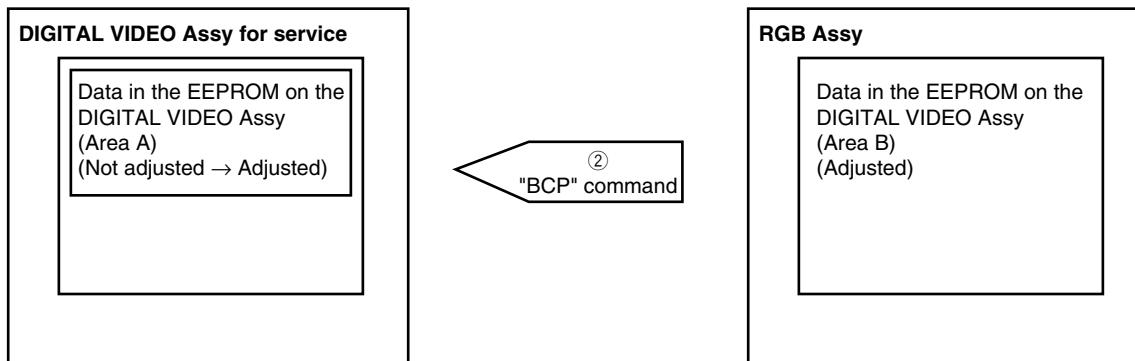

- ① The keyword on the DIGITAL VIDEO Assy is checked when the power is turned off, and if it is "adjusted", automatic backup is performed.
- ② If the keyword on the RGB Assy (Area B) is "adjusted," copying can be performed with the "BCP" RS232C command.

### ■ Actual automatic backup operations

#### 1. When the DIGITAL VIDEO Assy is replaced with an Assy for service

Changing of keywords is not required. Replace the DIGITAL VIDEO Assy with an Assy for service, and send the "BCP" RS232C command. Thus, the backup data in the EEPROM on the RGB Assy are copied to the EEPROM on the DIGITAL VIDEO Assy for service.

#### 2. When a repaired DIGITAL VIDEO Assy is mounted on another unit (reuse of the repaired DIGITAL VIDEO Assy)

The keyword of the DIGITAL VIDEO Assy to be reused must be changed to "not adjusted" using the "UAJ" RS232C command.

Note 1: If a repaired DIGITAL VIDEO Assy is mounted in another unit (Unit 2) without this change of keyword, and the power to the unit 2 is turned off, the data in force before the repair of the DIGITAL VIDEO Assy will be copied to Area B of the RGB Assy of Unit 2, overwriting the data necessary for Unit 2. Once overwritten, the original data will not be restored.

A 3. When a repaired DIGITAL VIDEO Assy is mounted on the original unit (reuse of the repaired DIGITAL VIDEO Assy)  
 Changing of keywords is not required. After the repaired DIGITAL VIDEO Assy is mounted in the original unit, the unit can operate with its latest adjustment values.

4. When both the DIGITAL VIDEO Assy and RGB Assy are simultaneously replaced with other assemblies  
 The automatic backup function of this unit will not work properly.

Note 2: Readjustment of the main unit is required.

Note 3: After readjustment of the main unit, send the "FAJ" RS232C command to change the keyword of the DIGITAL VIDEO Assy to "adjusted." Thus, when the unit is turned off, automatic backup of adjustment data is performed properly.

Note 4: If readjustment of the main unit is totally impossible, it can be omitted by installing the EEPROM (IC5206, 4 kbytes) originally mounted on the DIGITAL VIDEO Assy for service.

Note 5: After copying the backup data, turn the power off then back on to reflect the copied backup data.

## B ■ Miscellaneous

If the white balance (W/B) value is largely shifted because of aging, etc., W/B adjustment is required. (As this may be a rare case, the adjustment procedures are described below, just for your reference.)

### [ W/B-adjustment procedures ]

The W/B adjustment can be performed with the RS232C commands. Minolta CA-100 color difference meter are required.

- ① Send the "FAY" RS232C command to enter Factory mode.
- ② Set the keyword for the DIGITAL VIDEO Assy to "not adjusted" with the "UAJ" RS232C command.
- C ③ Obtain the current adjustment values in the two adjustment tables (see "6.6 Command Description").
  - Shifting to Table 1: Send the "M51" and "F60" commands. Obtaining the adjustment values: Send the "GPW" command.
  - Shifting to Table 2: Send the "M51" and "F75" commands. Obtaining the adjustment values: Send the "GPW" command.
- ④ For each table, set the brightness.
  - Adjustment in Table 1: After sending the "F60" command, perform adjustment.
  - Adjustment in Table 2: After sending the "F75" command, perform adjustment.

For each table, change the RGB parameters so that the values measured using a Minolta color difference meter (CA-100) become as indicated below. In this case, any one of PRH, PGH, or PBH must be set to 256.

	Cd/mm
x	285
y	289

"PRH\*\*\*" : 000 - 511  
 "PGH\*\*\*" : 000 - 511  
 "PBH\*\*\*" : 000 - 511

- D ⑤ Check after adjustment
  - Shifting to Table 1: Send the "F60" command. Obtaining the adjustment values: Send the "GPW" command.
  - Shifting to Table 2: Send the "F75" command. Obtaining the adjustment values: Send the "GPW" command.

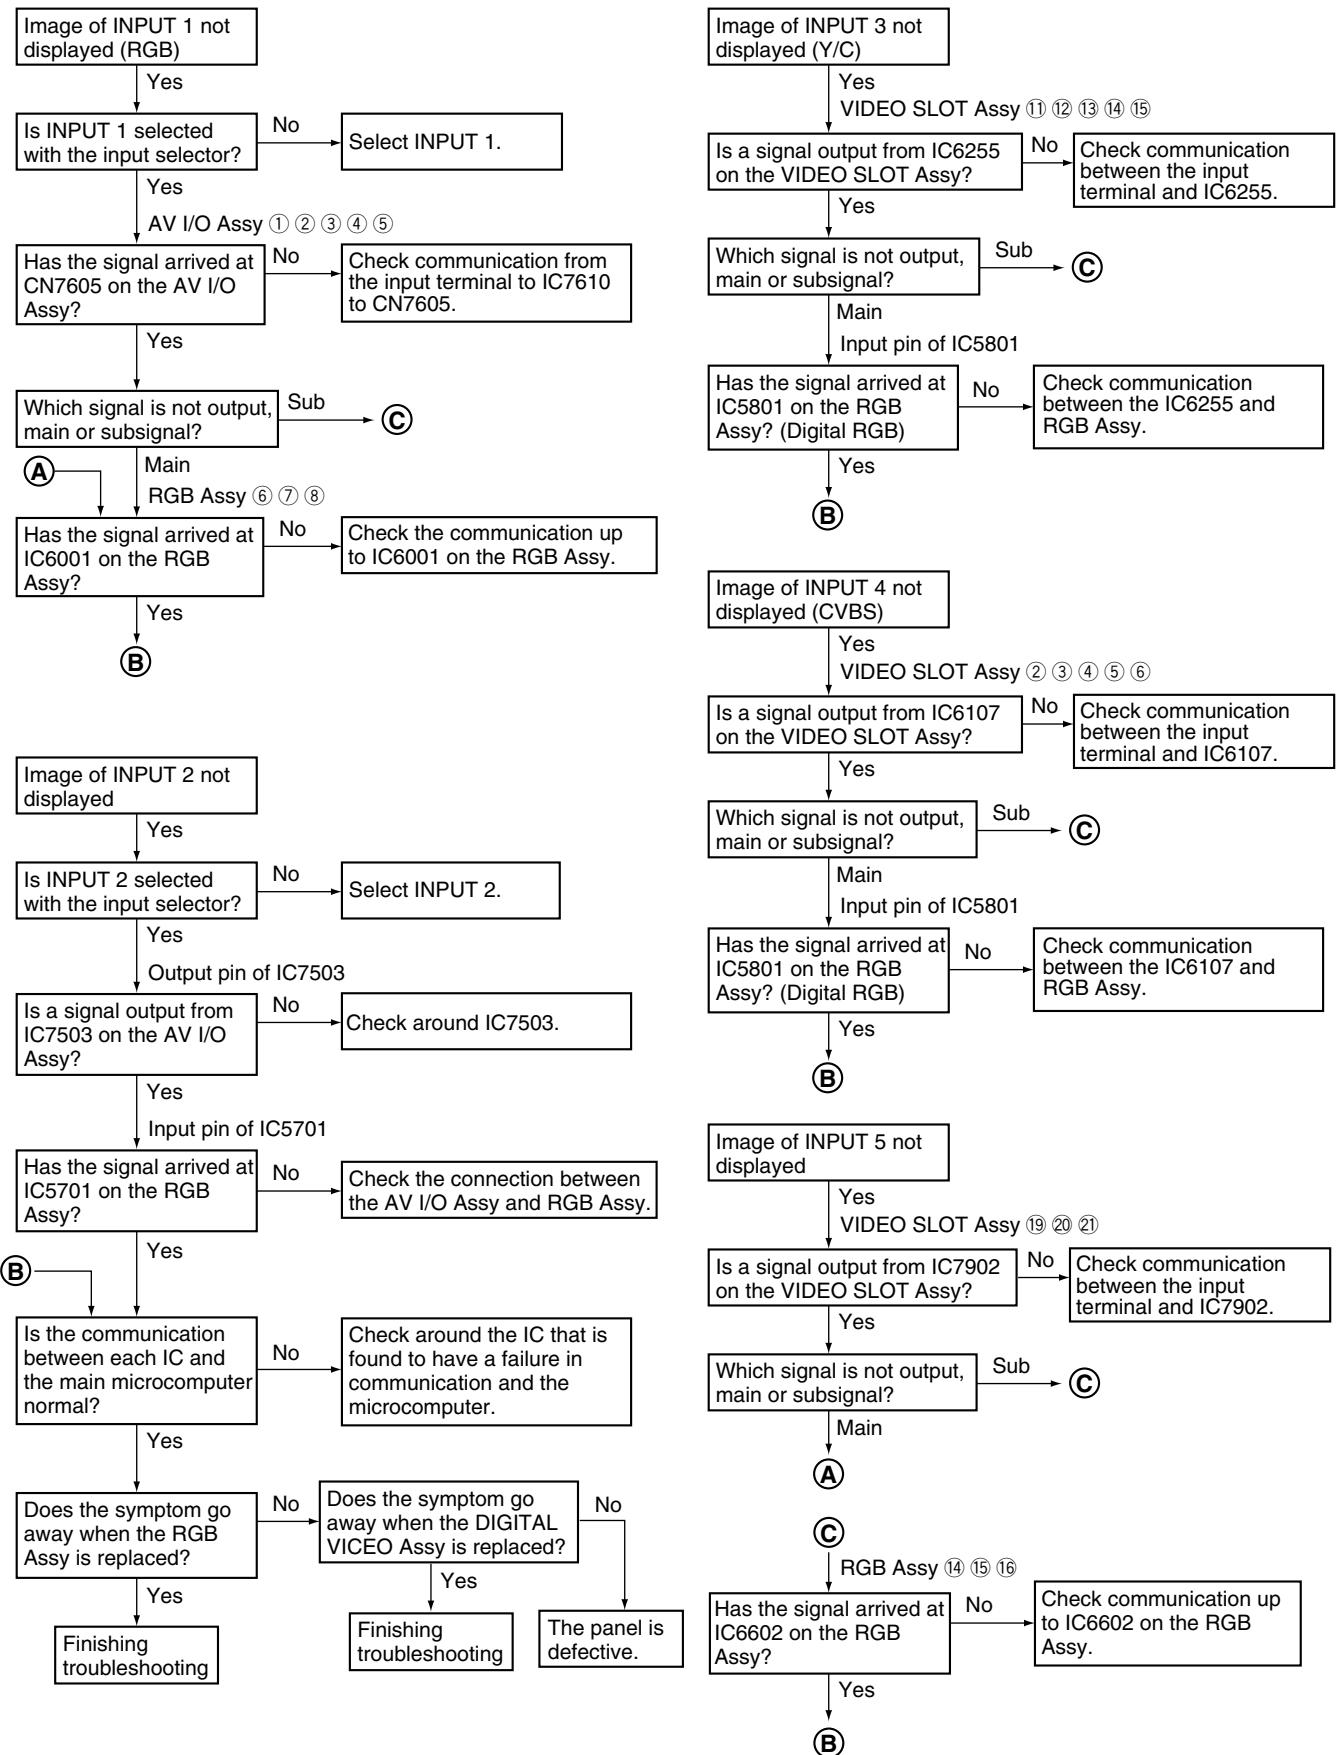

Check that the adjustment data have been changed.
- ⑥ Change the keyword for the DIGITAL VIDEO Assy to "adjusted" by sending the "FAJ" RS232C command.  
**Note:** Use a Minolta CA-100 color difference meter or the equivalent for measurement. Otherwise, the specifications of the product cannot be assured.
- E ⑦ Send the "FAN" RS232C command to enter Normal mode.
  - If the value is different from that you set, readjust it.

**Note:** To reset the adjustment to its original value, send the "BCP" RS232C command then turn the power off then back on to retrieve the backup data.

  - The setting values for color temperature differ between Factory mode and Normal mode. Therefore, the setting value for color-difference signals in Normal mode are different from those in Factory mode, even after the White Balance adjustment has been performed.

## 7.1.7 TROUBLESHOOTING

## Video

## Audio

## 7.1.8 DISASSEMBLY

### • PDP-504CMX model

#### 1 Rear Case, Front Case

- ① Remove the grip by removing the four screws.

**Note:**

When reattaching the grip, be sure to securely tighten the screws.

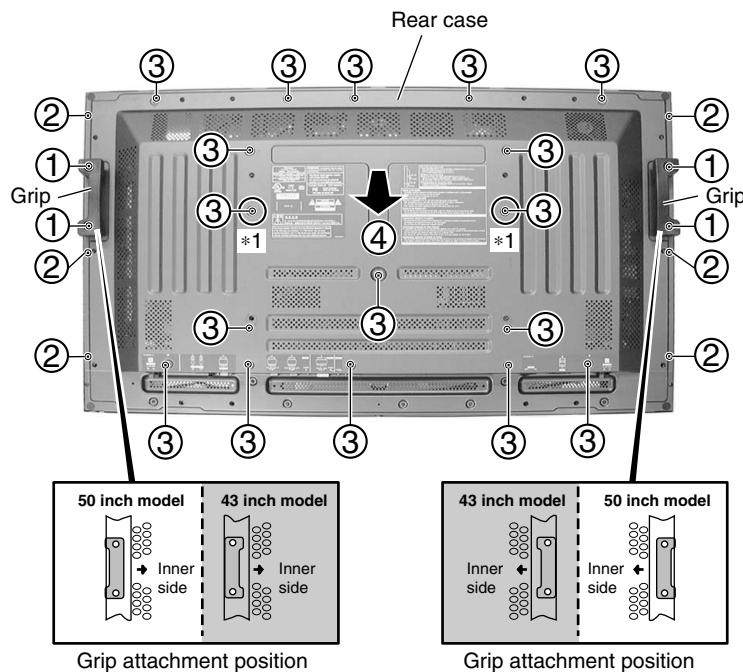

- ② Remove the six screws.

- ③ Remove the seventeen screws.

**Note :**

When reattaching the rear case, first attach the screws for the holes indicated with \*1 to place the rear case in the correct position.

- ④ Remove the rear case.

- ⑤ Remove the three screws.

- ⑥ Remove the one rivet.

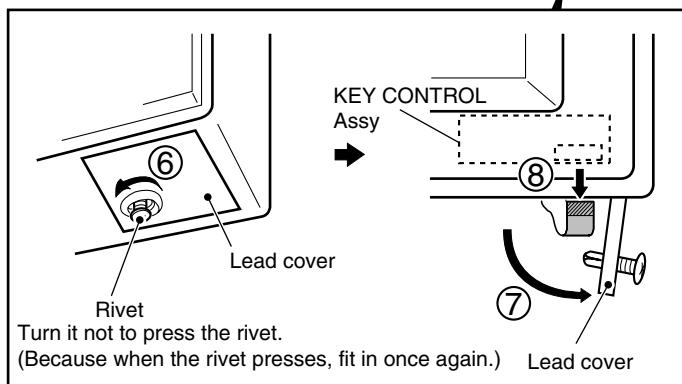

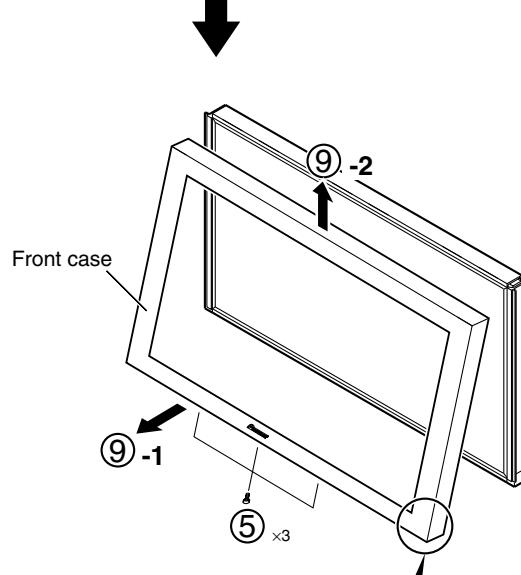

- ⑦ Remove the lead cover.

- ⑧ Disconnect the flexible cable.

- ⑨ Remove the front case.

**Note:**

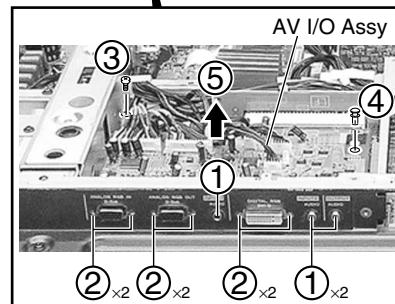

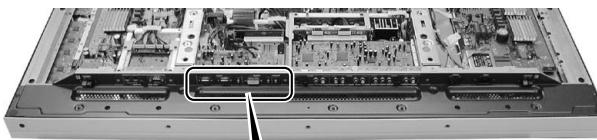

If only the front case must be removed, without removing the rear case, perform the steps ⑤ to ⑨.

## 2 Multi Base Section

### ● Diagnosis of AV I/O Assy

- ① Remove the three nuts.
- ② Remove the six hexagon head screws.
- ③ Remove the one screw.
- ④ Remove the one pin grommet.
- ⑤ Remove the AV I/O Assy with the AV I/O I/F Assy.

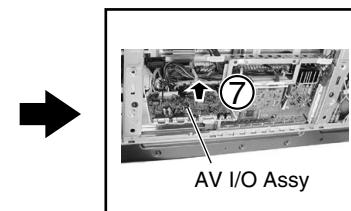

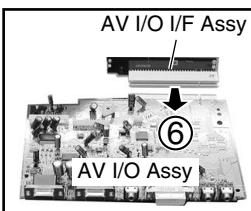

- ⑥ Remove the AV I/O Assy from the AV I/O I/F Assy.
- ⑦ Connect the AV I/O Assy to slot of the RGB Assy.

### Diagnosis

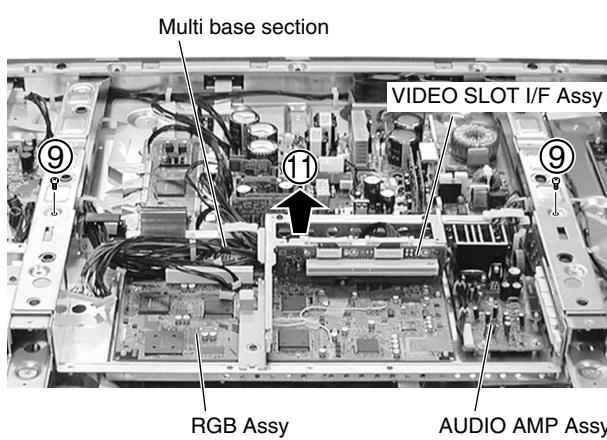

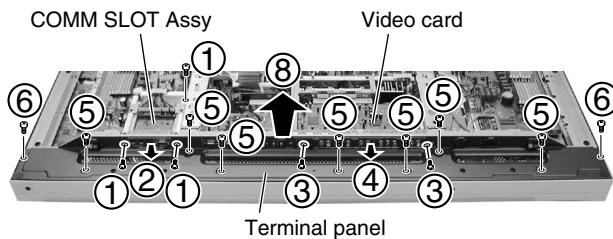

**Note:**

The cooling fan may rotate during diagnosis, in the following cases:  
 • When the rotation speed of the fan has been set to maximum for Integrator mode  
 • When the ambient temperature surrounding the temperature sensor is about 35°C or higher

### ● Removing Multi Base Section

- ① Remove the one screw and two Torque screws.
- ② Remove the COMM SLOT Assy.
- ③ Remove the two Torque screws.
- ④ Remove the video card (option).
- ⑤ Remove the seven screws.
- ⑥ Remove the two screws.
- ⑦ Disconnect the some connectors at need.
- ⑧ Remove the terminal panel.
- ⑨ Remove the two screws.
- ⑩ Disconnect the some connectors at need.
- ⑪ Remove the multi base section.

**Note:**

Some tiny metal shavings may be released from the paring screw section when the VIDEO SLOT I/F Assy is detached from the sheet metal and is reattached to it. Be sure to clear away any shavings or other foreign matter before reattaching it to the RGB Assy.

## 3 X CONNECTOR A Assy, B Assy, 50 SCAN A Assy and B Assy

### ● X CONNECTOR A and B Assy

- ① Remove the enclosure sheet 1.

**Note:**

Enclosure sheet 1 is attached to comply with the safety standards. Make sure that it will not be shifted or peeled off. If it is peeled off, securely reattach it in its original place.

- ② Remove the jumper wire by removing the flat clamp.  
 ③ Remove the one nylon rivet.  
 ④ Remove the one screw.

**Note:**

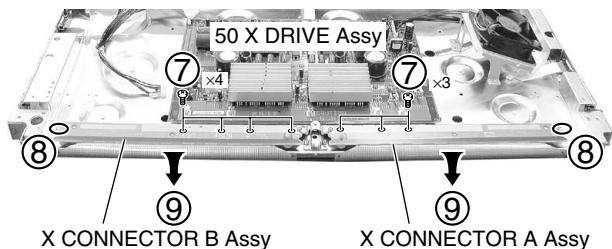

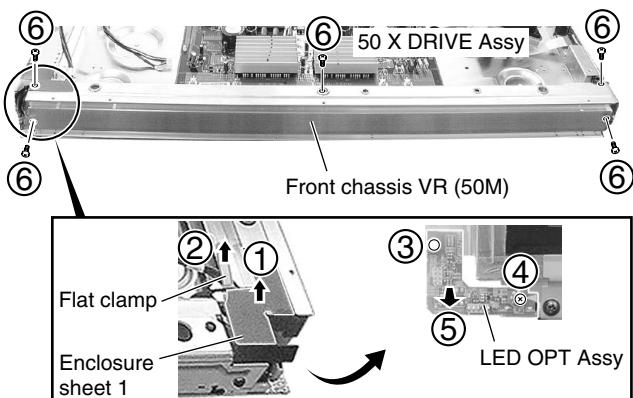

Be sure to remove this screw. If you don't, the connector on the LED OPT Assy may be damaged.

- ⑤ Remove the LED OPT Assy.  
 ⑥ Remove the front chassis VR (50M) by removing the five screws.

- ⑦ Remove the seven screws.  
 ⑧ Remove the two spacers.  
 ⑨ Remove the X CONNECTOR A and B Assy.

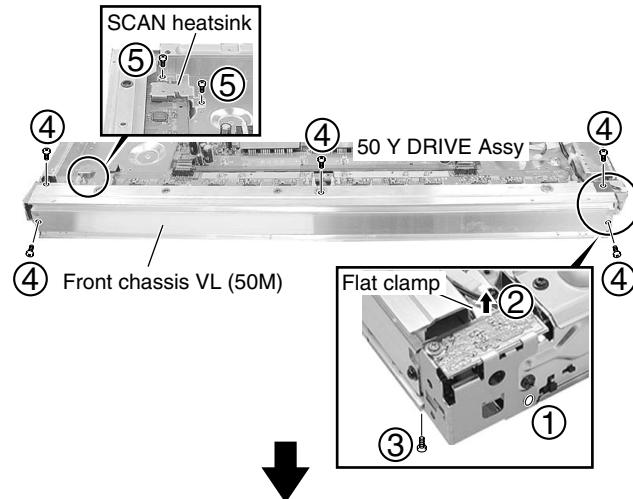

**Note when reassembling the front chassis VR (50M)**

Remove or loosen the screws that secure the panel holder in order not to damage the front protect panel Assy.

### ● 50 SCAN A and B Assy

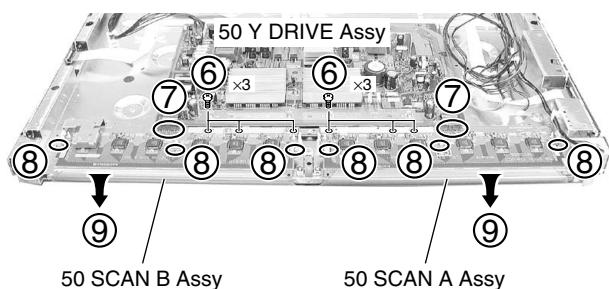

- ① Remove the one nylon rivet.  
 ② Remove the jumper wire by removing the flat clamp.  
 ③ Remove the one screw.  
 ④ Remove the front chassis VL (50M) by removing the five screws.  
 ⑤ Remove the SCAN heatsink by removing the two screws.

- ⑥ Remove the six screws.  
 ⑦ Disconnect the two pin connectors.  
 ⑧ Remove the six spacers.  
 ⑨ Remove the 50 SCAN A and B Assy.

**Note when reassembling the front chassis VL (50M)**

Remove or loosen the screws that secure the panel holder in order not to damage the front protect panel Assy.

## •PDP434cmx model

### 1 Rear Case, Front Case

- ① Remove the grip by removing the four screws.

**Note:**

When reattaching the grip, be sure to securely tighten the screws.

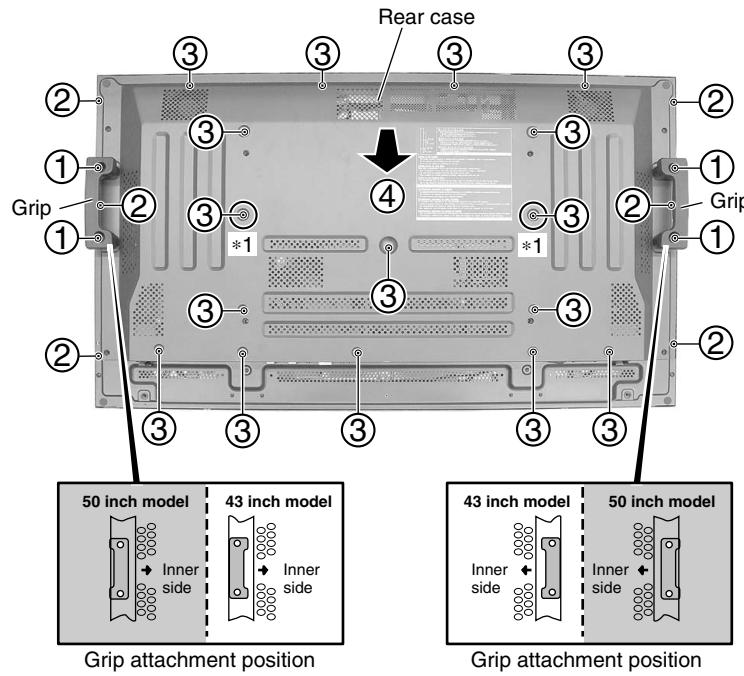

- ② Remove the six screws.

- ③ Remove the sixteen screws.

**Note :**

When reattaching the rear case, first attach the screws for the holes indicated with \*1 to place the rear case in the correct position.

- ④ Remove the rear case.

- ⑤ Remove the three screws.

- ⑥ Remove the one rivet.

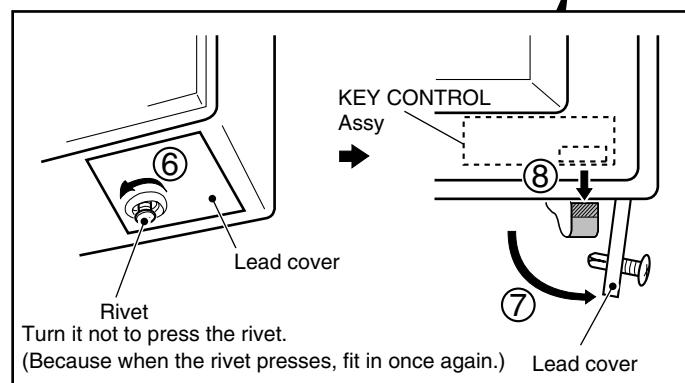

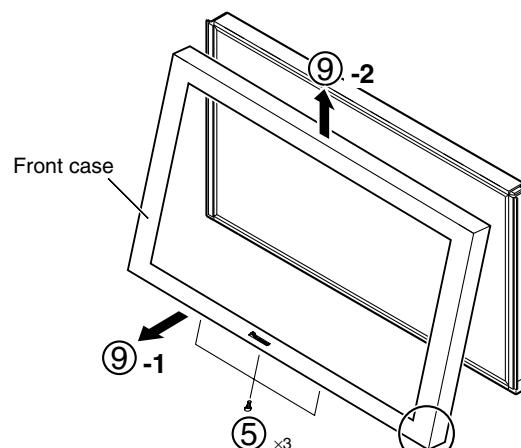

- ⑦ Remove the lead cover.

- ⑧ Disconnect the flexible cable.

- ⑨ Remove the front case.

**Note:**

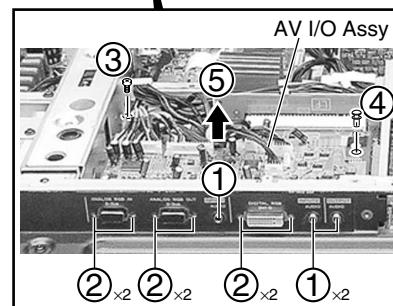

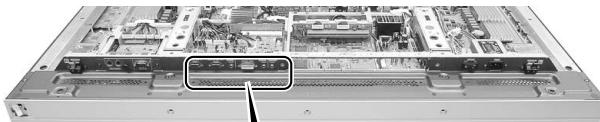

If only the front case must be removed, without removing the rear case, perform the steps ⑤ to ⑨.

## 2 Multi Base Section

### ● Diagnosis of AV I/O Assy

- ① Remove the three nuts.
- ② Remove the six hexagon head screws.
- ③ Remove the one screw.
- ④ Remove the one pin grommet.
- ⑤ Remove the AV I/O Assy with the AV I/O I/F Assy.

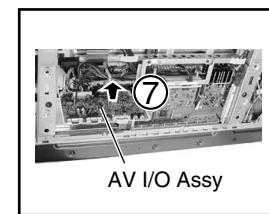

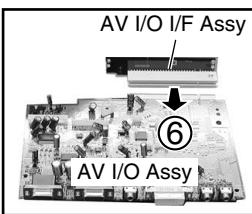

- ⑥ Remove the AV I/O Assy from the AV I/O I/F Assy.
- ⑦ Connect the AV I/O Assy to slot of the RGB Assy.

### Diagnosis

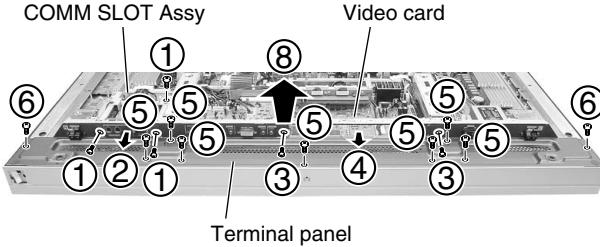

**Note:**

The cooling fan may rotate during diagnosis, in the following cases:  
 • When the rotation speed of the fan has been set to maximum for Integrator mode  
 • When the ambient temperature surrounding the temperature sensor is about 35°C or higher

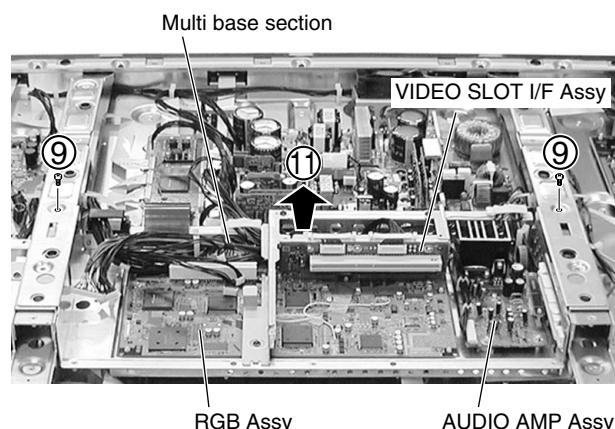

### ● Removing Multi Base Section

- ① Remove the one screw and two Torque screws.
- ② Remove the COMM SLOT Assy.
- ③ Remove the two Torque screws.
- ④ Remove the video card (option).
- ⑤ Remove the seven screws.
- ⑥ Remove the two screws.
- ⑦ Disconnect the some connectors at need.
- ⑧ Remove the terminal panel.
- ⑨ Remove the two screws.
- ⑩ Disconnect the some connectors at need.
- ⑪ Remove the multi base section.

**Note:**

Some tiny metal shavings may be released from the paring screw section when the VIDEO SLOT I/F Assy is detached from the sheet metal and is reattached to it. Be sure to clear away any shavings or other foreign matter before reattaching it to the RGB Assy.

### 3 X CONNECTOR A, B Assy, 43 SCAN A, B Assy

#### ● X CONNECTOR A and B Assy

- ① Remove the enclosure sheet 1.

**Note:**

Enclosure sheet 1 is attached to comply with the safety standards. Make sure that it will not be shifted or peeled off. If it is peeled off, securely reattach it in its original place.

- ② Remove the jumper wire by removing the flat clamp.  
 ③ Remove the one nylon rivet.  
 ④ Remove the one screw.

**Note:**

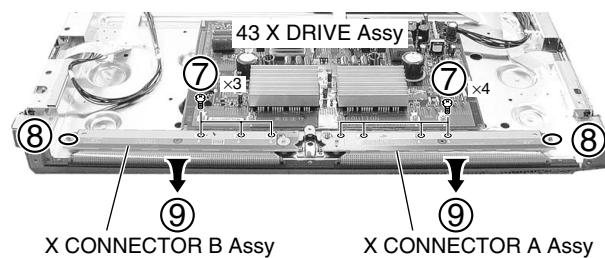

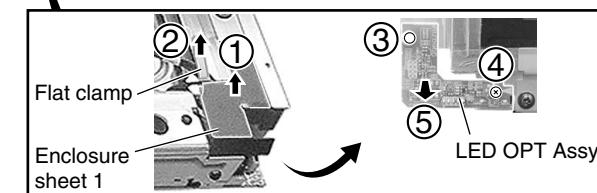

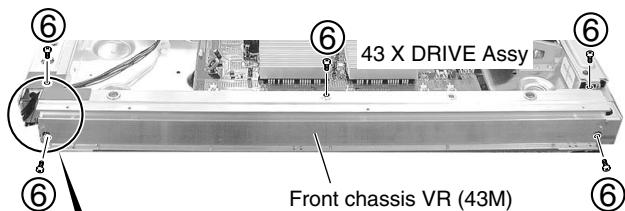

Be sure to remove this screw. If you don't, the connector on the LED OPT Assy may be damaged.

- ⑤ Remove the LED OPT Assy.  
 ⑥ Remove the front chassis VR (43M) by removing the five screws.

- ⑦ Remove the seven screws.  
 ⑧ Remove the two spacers.  
 ⑨ Remove the X CONNECTOR A and B Assy.

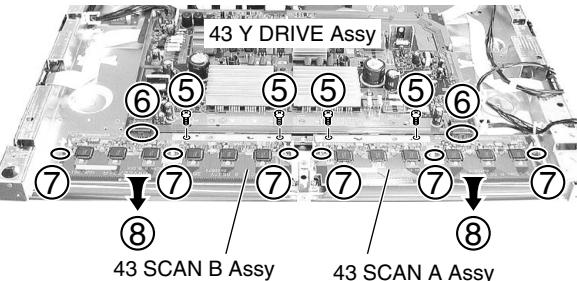

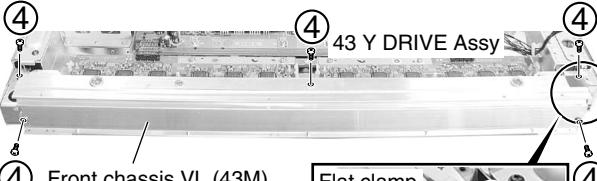

**Note when reassembling the front chassis VR (43M)**

Remove or loosen the screws that secure the panel holder in order not to damage the front protect panel Assy.

#### ● 43 SCAN A and B Assy

- ① Remove the one nylon rivet.  
 ② Remove the jumper wire by removing the flat clamp.  
 ③ Remove the one screw.  
 ④ Remove the front chassis VL (43M) by removing the five screws.

- ⑤ Remove the four screws.  
 ⑥ Disconnect the two pin connectors.  
 ⑦ Remove the six spacers.  
 ⑧ Remove the 43 SCAN A and B Assy.

**Note when reassembling the front chassis VL (43M)**

Remove or loosen the screws that secure the panel holder in order not to damage the front protect panel Assy.

### ● Pin Function

Pin Name	No.	I/O	Function
CLK	86	I	Shift clock.
DA	91	I/O	Serial data input/output of Shift register pin.
DB	85	I/O	Serial data input/output of Shift register pin.
CLR	92	I	"H" level: shift register contents of "L" level.
LE	87	I	"L" level: Slew, "H" level: Larch
A/ $\bar{B}$	84	I	Setup pin of shift register shift direction.
OC1	89	I	HVO Output control pin.
OC2	90	I	HVO Output control pin.
HVO	99,100,1-30 46-77	O	High-voltage drive output. (HVO1 - HVO64)
VDD	88	-	Logic power supply.
GND	35-41,82-83 93-94	-	Reference potential 0V (HVO diode anode)
VH1	32,33,96,97	-	HVO1 - 32 High voltage circuit power supply (HVO diode cathode).
VH2	43,44,79,80	-	HVO33 - 64 High voltage circuit power supply (HVO diode cathode).
NC	31,34,41,45 78,81,95,98	-	NC pin

### ● Pin Function (1/2)

No.	Pin Name	Function	I/O	ACTIVE
1	VSUS	[D/A] Vofs power control	O	
2	VOFS	[D/A] Vofs power control	O	
3	TXD_IC4	3 serial communication with IC4MANTA - data transmission	O	
4	RXD_IC4	3 serial communication with IC4MANTA - data receive	I	
5	CLK_IC4	3 serial communication with IC4MANTA - clock output	O	
6	BYTE	(GND connection)	I	
7	CNVSS	Pin for processor mode setting (pull-down)	I	
8	NC	NC pin		
9	NC	NC pin		
10	RST_MD	Reset input	I	L
11	XOUT	Output for main clock	O	-
12	VSS	GND	-	-
13	XIN	Input for main clock	I	-
14	VCC1	Power supply = STB3.3V	-	-
15	NMI	(pull-up)	I	
16	REM_B	(Interruption) Remote control signal input (in the panel unit)	I	
17	KEY_B	(Interruption) Key signal input (in the panel unit)	I	
18	RST2	(Interruption) IC4 reset detection	I	L
19	HD_IN_B	HD signal existence distinction	I	L
20	PD_MUTE	Mute the power down output to the POWER SUPPLY Unit	O	L
21	PS_PD	PD signal in the POWER SUPPLY Unit	I	H
22	DCC_PD	PD signal of DC-DC converter	I	H
23	NC	NC pin		
24	NC	NC pin		
25	VD_IN	V. frequency count	I	L
26	EEPRST	EEPROM power SW	O	H
27	E_SCL	IIC clock output for EEPROM	O	
28	E_SDA	IIC data I/O for EEPROM	I/O	
29	TXD	Communication with flash ROM writer - data transmission	O	
30	RXD	Communication with flash ROM writer - data receive	I	
31	SCLK	Communication with flash ROM writer - clock input	I	
32	BUSY	Communication with flash ROM writer - busy output	O	
33	TXD0	UART communication with main UCOM (external PC) - data transmission	O	
34	RXD0	UART communication with main UCOM (external PC) - data receive	I	
35	NC	NC pin		
36	REQ_MD	Communication request to the main UCOM	O	H
37	PSW_D	Mute of DC-DC converter	O	H
38	WE_IC4	In IC4 (MANTA) rewriting, control for communication path switch	O	H
39	EPM	Setting pin for flash rewriting mode (pull-down)	I	
40	IC4_RST	IC4 forced reset	O	L
41	IC4_CE	Enable for IC4 communication	O	L
42	IC4_BUSY	Busy input for IC4 communication	I	H
43	REQ_IC4	Communication request from the IC4	I	H
44	CE	Setting pin for flash rewriting mode (pull-up)	I	
45	PSIZE	Panel size distinction	I	
46	B_SCL	IIC clock output for backup EEPROM	O	H
47	B_SDA	IIC DATA I/O for backup EEPROM	I/O	H
48	ADR_PD	PD signal of address junction	I	H
49	LED_G	Green LED control	O	L
50	LED_R	Red LED control	O	L

## ● Pin Function (2/2)

No.	Pin Name	Function	I/O	ACTIVE
A 51	DRV_OFF	Driving OFF	O	H
52	RELAY	Power ON control output	O	H
53	POWER	Power ON control input	I	H
54	MR_ST_B	MDR connection detection	I	L
55	OP_DET	Rear case open detection	I	
56	NC	NC pin		
57	PNL_MUTE	Panel mute	I	
58	DITHER	PC/VIDEO dither switch (panel module exclusive use)	I	
59	NC	NC pin		
B 60	VCC2	Power supply = STB 3.3V	-	-
61	PD_TRG	PD detection	I	L
62	VSS	GND	-	-
63	VH_PD	Vh power decrease PD	I	H
64	YDRV_PD	Y drive PD signal	I	H
65	YRES_PD	Y drive PD signal	I	H
66	YDCDC_PD	PD signal of Y drive DC-DC converter	I	H
67	IC5V_PD	5V power decrease PD	I	H
68	Xsus_PD	X drive PD signal	I	H
69	XDCDC_PD	PD signal of X drive DC-DC converter	I	H
C 70	XDRV_PD	X drive PD signal	I	H
71	NC	NC pin		
72	MR_AC	MR power monitor	I	H
73	AC_DET	AC power monitor at panel side (same signal as CST1)	I	L
74	DVI_MUTE	Mute of panel link output	O	H
75	A_MUTE	Audio mute	O	H
76	A_NG	Audio NG detection	I	L
77	A_SCL	IIC clock output for audio/others	O	L
78	A_SDA	IIC data I/O for audio/others	I/O	L
D 79	TRUBASS	TRUBASS ON/OFF	O	H
80	STB_SW	Standby setting of audio amp.	O	L
81	FOCUS	FOCUS ON/OFF	O	H
82	SRS	SRS ON/OFF	O	H
83	DDC_WP	DDCROM write protection	O	H
84	DVI_DET	DVI cable disconnection detection	I	H
85	RSTBTMDS	Reset detection of panel link receiver	I	L
E 86	L_SYNC	DE omission detection of the panel link	I	L
87	NC	NC pin		
88	NC	NC pin		
89	MASK1	[A/D] Mask display setting	I	
90	MAX_PLS2	[A/D] Brightness setting for panel module	I	
91	MAX_PLS1	[A/D] Brightness setting for panel module	I	
92	TEMP	[A/D] AD input for temperature sensor	I	
93	MODE	[A/D] Operation mode setting	I	
94	AVSS	GND for A/D input	-	-
95	MODEL	[A/D] CMX/HD/TV/WX distinction	I	
96	VREF	Reference voltage for A/D input	-	-
97	AVCC	Power supply for A/D input = STB3.3V	-	-
98	NC	NC pin		
99	NC	NC pin		
100	AMG_MD	Address emergency monitor	I	H

## ● Pin Function

No.	Pin Name	I/O	Pin Function
A 1	GINA/UINA	I	Analog GINA or UINA signal input. Sync signal is input on SYNCIN pin.
2	GSG1	I	GOUT/UOUT output buffer gain set input
3	GINB/UINB	I	Analog GINB or UINB signal input. Sync signal is input on SYNCIN pin.
4	(NC)	-	No connection
B 5	BINA/VINA	I	Analog BINA or VINA signal input. Sync signal is input on SYNCIN pin.
6	GSB1	I	BOUT/VOUT output buffer gain set input
7	BINB/VINB	I	Analog BINB or VINB signal input. Sync signal is input on SYNCIN pin.
8	(NC)	-	No connection
9	DISABLE	I	Power save function. Built-in pull-down resistor. L : Enable H : Disable (Output pins: ROUT/YOUT, GOUT/UOUT, and BOUT/VOUT are high impedance.)
C 10	GND3	-	Analog ground
11	BOUT/Vout	O	B/V signal output
12	VCC3	-	Analog 5V supply
13	GND2	-	Analog ground
14	GOUT/UOUT	O	G/U signal output
15	VCC2	-	Analog 5V supply
16	GND1	-	Analog ground
17	ROUT/Yout	O	R/Y signal output
18	VCC1	-	Analog 5V supply
19	GND4	-	Analog ground
20	RFC	-	LPF (lowpass filter) cutoff frequency setting resistor connection
21	VFC	I	LPF (lowpass filter) cutoff frequency setting voltage input
D 22	MUXSEL	I	Input select signal. Built-in pull-down resistor. L : XINA pin select H : XINB pin select
23	THROUGH	I	Filter through Built-in pull-down resistor. L : Filter function H : Filter through (buffer only)
24	VCC4	-	Analog 5V supply
E 25	RINA/YINA	I	Analog RINA or YINA signal input. Sync signal is input on SYNCIN pin.
26	GSR1	I	ROUT/YOUT output buffer gain set input
27	RINB/YINB	I	Analog RINB or YINB signal input. Sync signal is input on SYNCIN pin.
28	(NC)	-	No connection

## ● Pin Function

No.	Pin Name	Pin Function
A	1 HSCTL	HDRV output Used to select whether to output the VDRV section of the HDRV output signal. High : VDRV section of HDRV is output Low : VDRV section of HDRV is not output
	2 C/HSYNC IN	Composite sync / H SYNC input Input either the composite synchronization signal or the horizontal synchronization signal. Input is clamped, and is initiated by capacitor coupling.
	3 VIDEO IN	SYNC ON VIDEO input Inputs the SYNC ON VIDEO signal(green). Input is sink chip clamped. Input is initiated by capacitor coupling.
B	4 VSEPA	f-V conversion Converts the horizontal synchronization signal frequency into a voltage. The voltage generated is proportional to the frequency of the horizontal synchronization signal. Attach a 0.56 $\mu$ F capacitor between the ground pins.
	5 VSYNC IN	V SYNC input Inputs the vertical synchronization signal.
C	6 CVPOL	Vertical polarity integration Integrates the vertical synchronization signal polarity detection circuit. Attach a 1.5 $\mu$ F capacitor between this pin and the ground.
	7 CVEXI	Vertical existence integration Integrates the vertical synchronization signal existence detection circuit. Attach a 1 $\mu$ F capacitor between this pin and the ground.
D	8 CPSEL	Setting the clamp position Used to set the clamp pulse generation position to either the front or back edge of HSYNC High : The front edge is the generation position Open : Composite / H SYNC IN : The front edge is the generation position VIDEO IN : The back edge is the generation position Low : The back edge is the generation position
	9 GND	Ground
E	10 CPWID	Setting the clamp pulse width Sets the clamp pulse width according to the attached time constant. Attach a resistor between this pin and VCC and, a capacitor between this pin and GND. When R = 3.9k $\Omega$ and C = 100pF, pulse width is approximately 400 ns. Set the resistor to register an abnormality at 1k $\Omega$ .
	11 VDRV	VDRV output Outputs the vertical synchronization signal. The output signal has positive polarity.
F	12 CLAMP	Clamp output Outputs the clamp pulse generated from the vertical synchronization signal. The output signal has a positive polarity.
	13 HDRV	HDRV output Outputs the clamp pulse generated from the horizontal synchronization signal. The output signal has positive polarity.
G	14 Vcc	Power supply
	15 EXIV	Vertical existence output Indicates whether the vertical synchronization signal exists.
	16 POLV	Vertical polarity output Indicates the polarity of the vertical synchronization signal.
	17 EXIH	Horizontal existence output Indicates whether the horizontal synchronization signal exists.
	18 POLH	Horizontal polarity output Indicates the polarity of the horizontal synchronization signal.

■ SII1161CTU-K (AV I/O ASSY : IC7503)

- Panel Link Receiver IC

### ● Pin Arrangement (Top View)

## ● Pin Function

### Output Pins

Pin Name	No.	Type	Function
QE23 - QE0	37-30, 27-20, 17-10	Out	Output Even Data[23:0] corresponds to 24-bit pixel data for one pixel per clock input mode and to the first 24-bit pixel data for two pixels per clock mode. Output data is synchronized with output data clock (ODCK). Refer to the TFT Panel Data Mapping section, which tabulates the relationship between the input data to the transmitter and output data from the receiver. A low level on PD# or PDO# will put the output drivers into a high impedance (tri-state) mode. A weak internal pull-down device brings each output to ground.
QO23 - QO0	77, 75-69, 66-59, 56-49	Out	Output Odd Data[23:0] corresponds to the second 24-bit pixel data for two pixels per clock mode. During one pixel per clock mode, these outputs are driven low. Output data is synchronized with output data clock (ODCK). Refer to the TFT Panel Data Mapping section, which tabulates the relationship between the input data to the transmitter and output data from the receiver. A low level on PD# or PDO# will put the output drivers into a high impedance (tri-state) mode. A weak internal pull-down device brings each output to ground.
ODCK	44	Out	Output Data Clock. This output can be inverted using the OCK_INV pin. A low level on PD# or PDO# will put the output driver into a high impedance (tri-state) mode. A weak internal pulldown device brings the output to ground.
DE	46	Out	Output Data Enable. This signal qualifies the active data area. A HIGH level signifies active display time and a LOW level signifies blanking time. This output signal is synchronized with the output data. A low level on PD# or PDO# will put the output driver into a high impedance (tri-state) mode. A weak internal pull-down device brings the output to ground.
Hsync Vsync CTL1 CTL2 CTL3	48 47 40 41 42	Out	Horizontal Sync output control signal. Vertical Sync output control signal. General output control signal 1. This output is not powered down by PDO#. General output control signal 2. General output control signal 3. A low level on PD# or PDO# will put the output drivers (except CTL1 by PDO#) into a high impedance (tri-state) mode. A weak internal pull-down device brings each output to ground.

### Differential Signal Data Pins

Pin Name	No.	Type	Function
RX0+ RX0- RX1+ RX1- RX2+ RX2-	90 91 85 86 80 81	Analog	Receiver Differential Data Pins. TMDS Low Voltage Differential Signal input data pairs.
RXC+ RXC-	93 94	Analog	Receiver Differential Clock Pins. TMDS Low Voltage Differential Signal input clock pair.
EXT_RES	96	Analog	Impedance Matching Control. An external 390Ω resistor must be connected between AVCC and this pin.

A

B

C

D

E

F

**Configuration Pins**

	<b>Pin Name</b>	<b>No.</b>	<b>Type</b>	<b>Function</b>
A	MODE	99	In	Mode Select Pin. Used to select between drop-in strap-selected operation, or register programmable operation. To activate register-programmable operation, tie both pin 99 and pin 7 LOW. HIGH=161B (Compatible) Mode – strap selections are used to set part operation. Internal registers controlling non strap-selectable functions are reset to their default values. LOW=1161 (Programmable) Mode – I <sup>2</sup> C registers are used to program part operation.
	OCK_INV	100	In	ODCK Polarity. A LOW level selects normal ODCK output. A HIGH level selects inverted ODCK output. All other output signals are unaffected by this pin. They will maintain the same timing no matter the setting of OCK_INV pin
B	SCL			I <sup>2</sup> C Port Clock. When pins 99 and 7 are tied LOW, pin 100 functions as an I <sup>2</sup> C port input clock. The slave I <sup>2</sup> C function does not ever try to extend cycles by pulling this pin low, so the pin remains input-only at all times. This pin accepts 3.3V signaling only; it is not 5V-tolerant.
	PIXS	4	In	Pixel Select. A LOW level indicates one pixel (up to 24-bits) per clock mode using QE[23:0]. A HIGH level indicates two pixels (up to 48-bits) per clock mode using QE[23:0] for first pixel and QO[23:0] for second pixel.
	STAG_OUT#	7	In	Staggered Output. A HIGH level selects normal simultaneous outputs on all odd and even data lines. A LOW level selects staggered output drive. This function is only available in two pixels per clock mode.
	I <sup>2</sup> C_MODE#			This pin must be tied LOW to put the receiver into I <sup>2</sup> C mode.
C	ST	3	In/Out	Output Drive. A HIGH level selects HIGH output drive strength. A LOW level selects LOW output drive strength.
	SDA			I <sup>2</sup> C Port Data. When pins 99 and 7 are tied LOW, pin 3 functions as an I <sup>2</sup> C port data I/O signal. This pin accepts 3.3V signaling only; it is not 5V-tolerant.
	HS_DJTR	1	In	HSYNC De-jitter. This pin enables/disables the HSYNC de-jitter function. To enable the HSYNC de-jitter function this pin should be HIGH. To disable the HSYNC de-jitter function this pin should be LOW.

**Power Management Pins**

	<b>Pin Name</b>	<b>No.</b>	<b>Type</b>	<b>Function</b>
D	SCDT	8	Out	Sync Detect. A HIGH level is outputted when DE is actively toggling indicating that the link is alive. A LOW level is outputted when DE is inactive, indicating the link is down. Can be connected to PDO# to power down the outputs when DE is not detected. The SCDT output itself, however, remains in the active mode at all times.
	PDO#	9	In	Output Driver Power Down (active LOW). A HIGH level indicates normal operation. A LOW level puts all the output drivers only (except SCDT and CTL1) into a high impedance (tri-state) mode. A weak internal pull-down device brings each output to ground. PDO# is a sub-set of the PD# description. The chip is not in power-down mode with this pin. SCDT and CTL1 are not tri-stated by this pin.
	PD#	2	In	Power Down (active LOW). A HIGH level indicates normal operation. A LOW level indicates power down mode. During power down mode, all the output drivers are put into a high impedance (tri-state) mode. A weak internal pull-down device brings each output to ground. Additionally, all analog logic is powered down, and all inputs are disabled. Driving PD# LOW disables all internal logic and outputs, including SCDT and clock detect functions; it also resets all internal programmable registers to their default states.

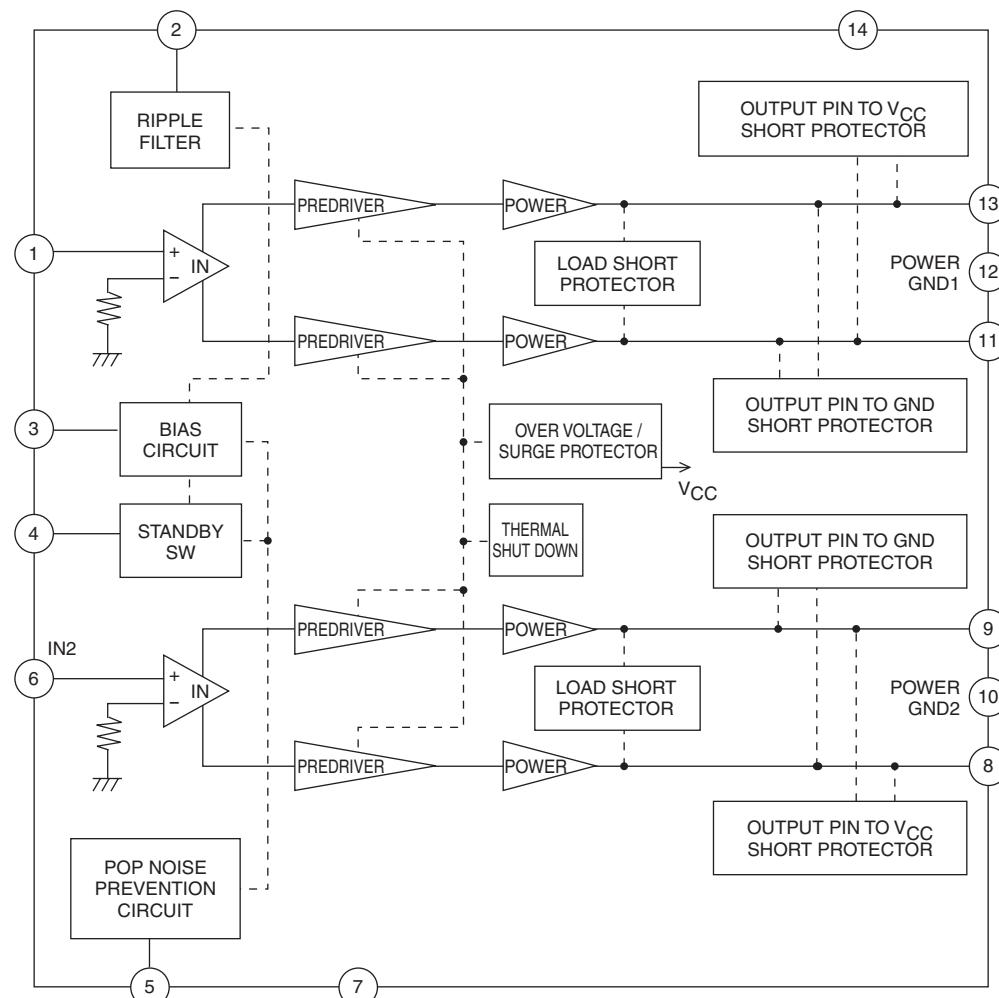

**Power and Ground Pins**

	<b>Pin Name</b>	<b>No.</b>	<b>Type</b>	<b>Function</b>
	VCC	6, 38, 67	Power	Digital Core VCC, must be set to 3.3V.
	GND	5, 39, 68	Ground	Digital Core GND.
	OVCC	18, 29, 43, 57, 78	Power	Output VCC, must be set to 3.3V.
	OGND	19, 28, 45, 58, 76	Ground	Output GND.
	AVCC	82, 84, 88, 95	Power	Analog VCC must be set to 3.3V.
	AGND	79, 83, 87, 89, 92	Ground	Analog GND.
	PVCC	97	Power	PLL Analog VCC must be set to 3.3V.
	PGND	98	Ground	PLL Analog GND.

## 8. PANEL FACILITIES

### ■ MAIN UNIT

#### Main unit

① Display stand

② Remote control sensor

Point the remote control toward the remote sensor to operate the unit.

③ Ambient light sensor

This sensor measures the level of light inside the viewing room; it is enabled when the [ENERGY SAVE] option is set to [AUTO].

④ ON indicator

Lights green when the plasma display is operating. When flashing, the indicator is used to indicate error messages.

The indicator flashes green once every two seconds when the [POWER MANAGEMENT] function is operating.

⑤ STANDBY indicator

Lights red when the unit is in standby mode.

When flashing, the indicator is used to indicate error messages.

⑥ Handles

The plasma displays PDP-50MXE1/PDP-50MXE1-S and PDP-43MXE1/PDP-43MXE1-S utilize differing methods of handle attachment, but the handles themselves are used in the same way.

Operation panel on the main unit

⑦ STANDBY/ON button

Press to put the display in operation or standby mode.

#### Operation panel on the main unit

⑧ INPUT button

Press to select the input.

⑨ MENU button

Press to open and close the on-screen menu.

⑩ ADJUST (▲ / ▼ / ▶ / ◁) buttons

Use these buttons to move the onscreen cursor between selection options, and to perform adjustments.

Instructions for use are given with each command option onscreen.

⑪ VOLUME (+/-) buttons

When not indicated for use in onscreen menu items, these buttons are used for adjusting the sound volume.

⑫ SET/DISPLAY button

Use to confirm onscreen menu selections, and to change settings.

When not indicated by onscreen menus, used to display the current set status.

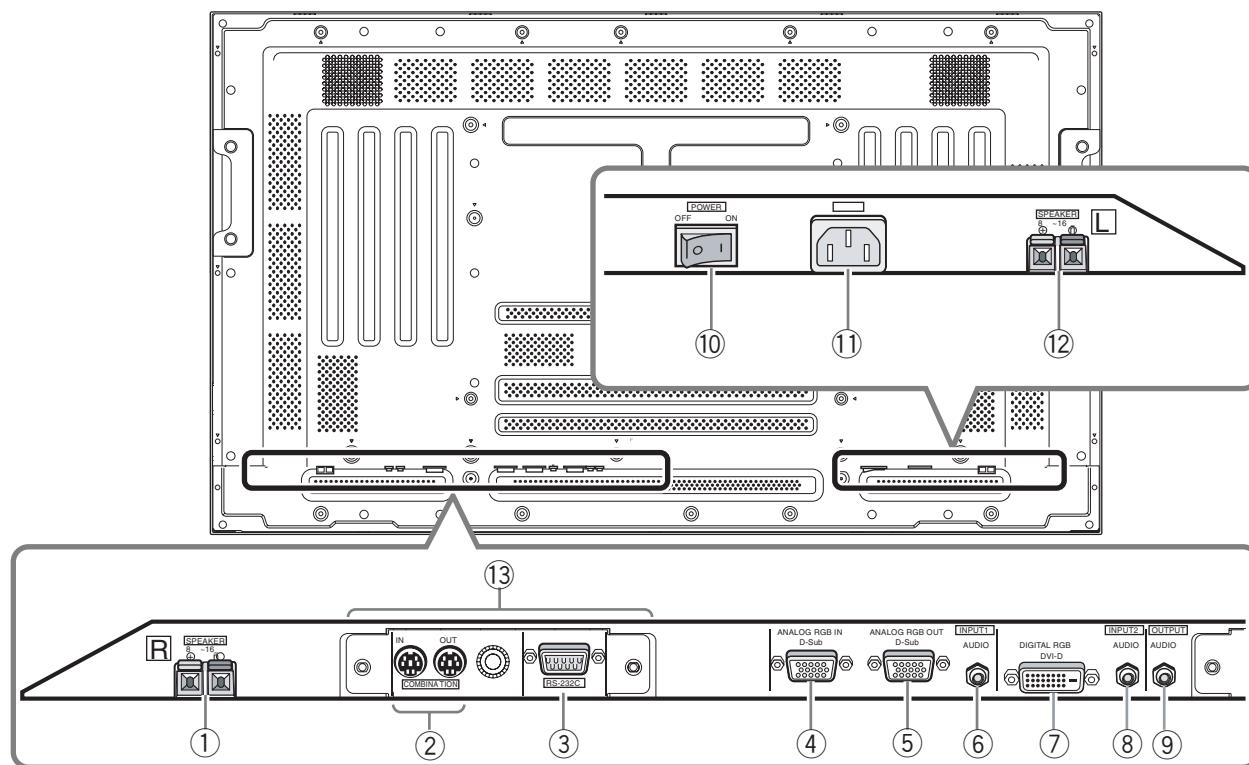

⑬ SCREEN SIZE button

Press to select the screen size.

⑭ AUTO SET UP button

When using computer signal input, automatically sets the [POSITION], [CLOCK] and [PHASE] to optimum values.

## ■ CONNECTION PANEL (PLASMA DISPLAY SECTION)

### Plasma Display Section

The plasma display is provided with 2 video input connectors, 1 video output connector, audio input/output jacks and speaker terminals.

When this video card is installed on a plasma display, an additional three sets of video input connectors are provided (total five), together with one additional video output connector (total two).

#### ① SPEAKER (R) terminal

For connection of an external right speaker.  
Connect a speaker that has an impedance of 8 -16 Ω.

#### ② COMBINATION IN/OUT

Never connect any component to these connectors without first consulting your Pioneer installation technician.

These connectors are used in the factory setup.

#### ③ RS-232C

Never connect any component to this connector without first consulting your Pioneer installation technician.  
This connector is used in the factory setup.

#### ④ ANALOG RGB IN (INPUT1) (mini D-sub 15 pin)

For connection of a personal computer (PC) or similar component. Make sure that the connection made corresponds to the format of the signal output from the connected component.

#### ⑤ ANALOG RGB OUT (INPUT1) (mini D-sub 15 pin)

Use the ANALOG RGB OUT (INPUT1) terminal to output the video signal to an external monitor or other component.

Note: The video signal will not be output from the ANALOG RGB OUT (INPUT1) terminal when the main power of this unit is off or in standby mode.

#### ⑥ AUDIO (INPUT1) (Stereo mini jack)

Use to obtain sound when INPUT1 is selected.  
Connect the audio output jack of components connected to INPUT1 to this unit.

#### ⑦ DIGITAL RGB (INPUT2) (DVI-D jack)

Use to connect a computer.  
Note: This unit does not support the display of copyguard-protected video signals.

#### ⑧ AUDIO (INPUT2) (Stereo mini jack)

Use to obtain sound when INPUT2 is selected.  
Connect the audio output jack of components connected to INPUT2 to this unit.

#### ⑨ AUDIO (OUTPUT) (Stereo mini jack)

Use to output the audio of the selected source component connected to this unit to an AV amplifier or similar component.

#### ⑩ MAIN POWER switch

Use to switch the main power of the unit on and off.

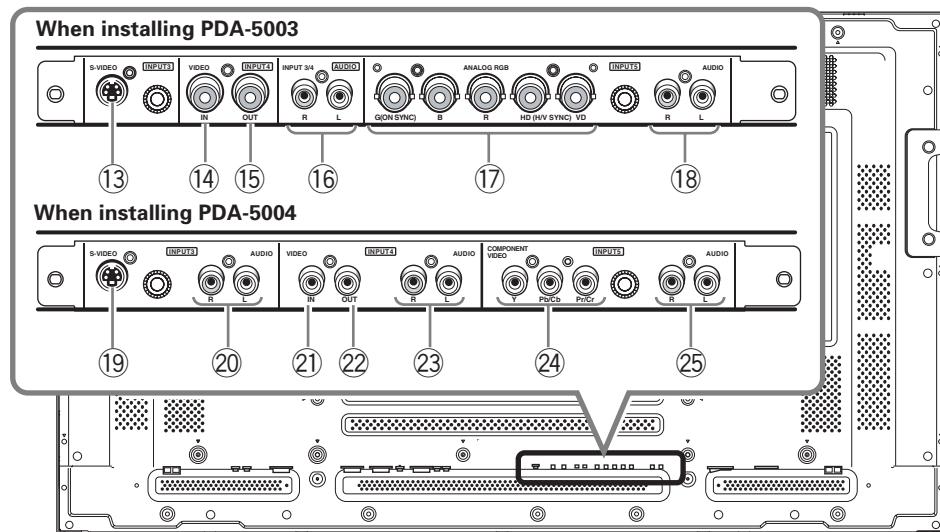

#### ⑪ AC IN

Use to connect a power cord to an AC outlet.

#### ⑫ SPEAKER (L) terminal

For connection of an external left speaker. Connect a speaker that has an impedance of 8 -16 Ω.

## ■ CONNECTION PANEL (VIDEO CARD SECTION: PDA-5003, PDA-5004)

### Video Card <PDA-5003> Section

The video card is provided with 3 video input connectors, 1 video output connector, and 2 audio input connectors. Consult the pages noted in parentheses ( ) for details regarding connections to the various jacks and connectors.

#### **(13) S-VIDEO (INPUT3) (S-video jack)**

C For connection of components that have an S-video output jack such as a video deck, video camera, laser disc player, or DVD recorder.

#### **(14) VIDEO IN (INPUT4) (BNC jack)**

For connection of components that have a composite video output jack such as a video deck, video camera, laser disc player, or DVD recorder.

#### **(15) VIDEO OUT (INPUT4) (BNC jack)**

Use the VIDEO OUT (INPUT4) jack to output the video signal to an external monitor or other component.

Note: The video signal will not be output from the VIDEO OUT (INPUT4) jack when the main power of this display is off or in standby mode.

#### **(16) AUDIO R/L (INPUT3/4) (RCA Pin jacks)**

Use to obtain sound when INPUT3 or INPUT4 is selected. Connect these jacks to the audio output connectors of components connected to the video card's INPUT3 or INPUT4.

Note: The left audio channel (L) jack is not compatible with monaural input sources.

#### **(17) ANALOG RGB (INPUT5) (BNC jacks)**

E For connecting components equipped with RGB outputs jacks, such as a personal computer or external RGB decoder; or components equipped with component output jacks, such as a DVD recorder.

Make sure that the connection made corresponds to the format of the signal output from the connected component.

#### **(18) AUDIO R/L (INPUT5) (RCA Pin jacks)**

Use to obtain sound when INPUT5 is selected. Connect these jacks to the audio output connectors of components connected to the video card's INPUT5.

Note: The left audio channel (L) jack is not compatible with monaural input sources.

### Video Card <PDA-5004> Section

The video card is provided with 3 video input connectors, 1 video output connector, and 3 audio input connectors. Consult the pages noted in parentheses ( ) for details regarding connections to the various jacks and connectors.

#### **(19) S-VIDEO (INPUT3) (S-video jack)**

For connection of components that have an S-video output jack such as a video deck, video camera, laser disc player, or DVD recorder.

#### **(20) AUDIO R/L (INPUT3) (RCA Pin jacks)**

Use to obtain sound when INPUT3 is selected. Connect these jacks to the audio output connectors of components connected to the video card's INPUT3.

Note: The left audio channel (L) jack is not compatible with monaural input sources.

#### **(21) VIDEO IN (INPUT4) (RCA Pin jack)**

For connection of components that have a composite video output jack such as a video deck, video camera, laser disc player, or DVD recorder.

#### **(22) VIDEO OUT (INPUT4) (RCA Pin jack)**

Use the VIDEO OUT (INPUT4) jack to output the video signal to an external monitor or other component.

Note: The video signal will not be output from the VIDEO OUT (INPUT4) jack when the main power of this display is off or in standby mode.

#### **(23) AUDIO R/L (INPUT4) (RCA Pin jacks)**

Use to obtain sound when INPUT4 is selected. Connect these jacks to the audio output connectors of components connected to the video card's INPUT4.

Note: The left audio channel (L) jack is not compatible with monaural input sources.

#### **(24) COMPONENT VIDEO (INPUT5) (RCA Pin jacks)**

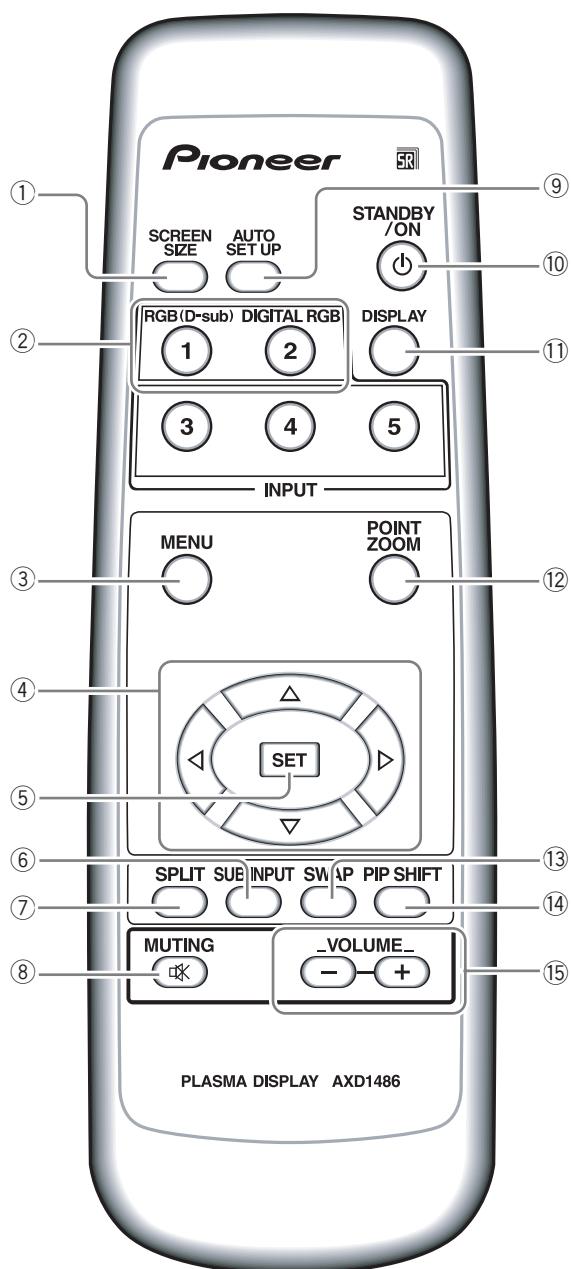

For connection of components that have component video output jacks such as a DVD recorder.

#### **(25) AUDIO R/L (INPUT5) (RCA Pin jacks)**

Use to obtain sound when INPUT5 is selected. Connect these jacks to the audio output connectors of components connected to the video card's INPUT5.

Note: The left audio channel (L) jack is not compatible with monaural input sources.

## ■ REMOTE CONTROL UNIT

**① SCREEN SIZE button**

Press to select the screen size.

**② INPUT buttons**

Press to select the input .

**③ MENU button**

Press to open and close the on-screen menu.

**④ ADJUST (▲ / ▼ / ▶ / ◀) buttons**

## ■ INSTALLATION OF THE UNIT

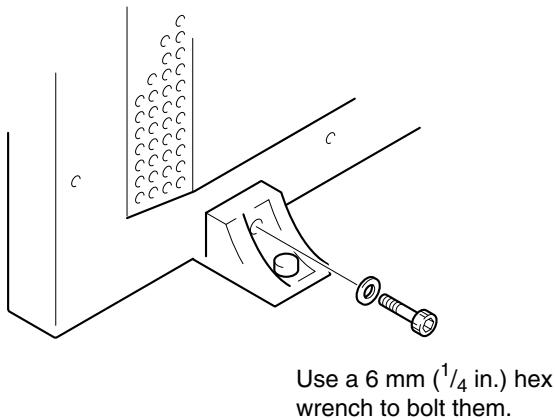

### Installation using the supplied display stand

A Be sure to fix the supplied stand to the installation surface. Use commercially available M8 bolts that are 25 mm longer than the thickness of the installation surface.

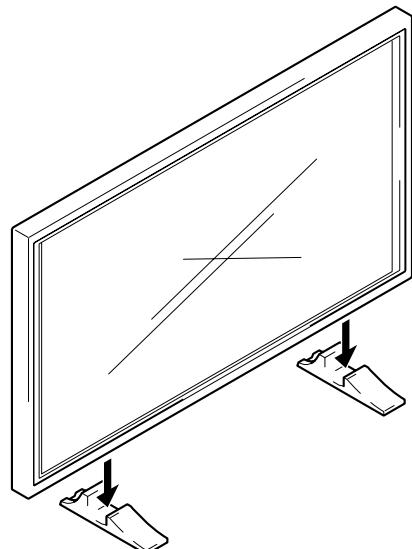

- 1. Fix the supplied stand to the installation surface at each of the 4 prepared holes using commercially available M8 bolts .**

### 3. Fix this unit using the supplied washer and bolt.

- 2. Set this unit in the stand.**

### ! CAUTION

This display unit weighs at least 30 kg (67 lbs) and has little front-to-back depth, making it very unstable when stood on edge. As a result, two or more persons should cooperate when unpacking, moving, or installing the display.

### Installation using the optional PIONEER stand or installation bracket

- Please be sure to request installation or mounting of this unit or the installation bracket by an installation specialist or the dealer where purchased.
- When installing, be sure to use the bolts provided with the stand or installation bracket.
- For details concerning installation, please refer to the instruction manual provided with the stand or installation bracket.

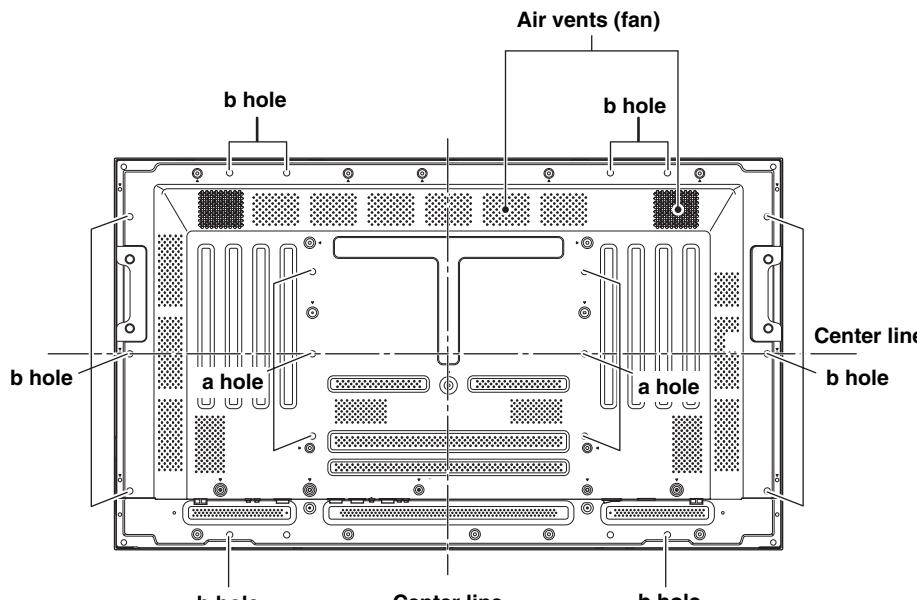

### Installation using accessories other than the PIONEER stand or installation bracket (sold separately)

- When possible, please install using parts and accessories manufactured by PIONEER. PIONEER will not be held responsible for accident or damage caused by the use of parts and accessories manufactured by other companies.
- For custom installation, please consult the dealer where the unit was purchased, or a qualified installer.

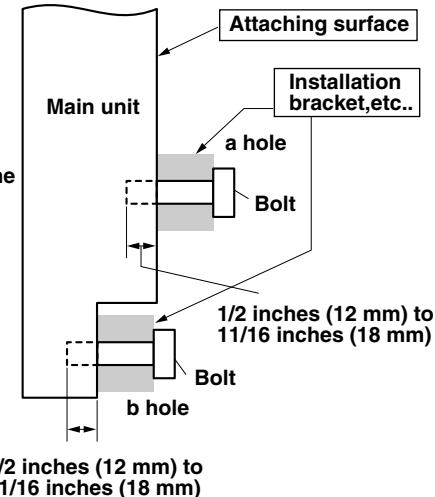

### Wall-mount installation of the unit

This unit has been designed with bolt holes for wall-mount installation, etc.. The installation holes that can be used are shown in the diagram below.

- Be sure to attach in 4 or more locations above and below, left and right of the center line.
- Use bolts that are long enough to be inserted 1/2 inch (12 mm) to 11/16 inch (18 mm) into the main unit from the attaching surface for both a holes and b holes. Refer to the side view diagram below.
- As this unit is constructed with glass, be sure to install it on a flat, unwarped surface.

#### **CAUTION**

To avoid malfunction, overheating of this unit, and possible fire hazard, make sure that the vents on the main unit are not blocked when installing. Also, as hot air is expelled from the air vents, be careful of deterioration and dirt build up on rear surface wall, etc..

#### **CAUTION**

Please be sure to use an M8 (Pitch = 1.25 mm) bolt. (Only this size bolt can be used.)

#### **CAUTION**

Because this unit weighs about 88 lbs 3 oz (about 40 kg) and the lack of depth makes it fairly unstable, please use 2 people or more when packing, carrying or installing.

#### **CAUTION**

This unit incorporates a thin design. To ensure safety if vibrated or shaken, please be sure to take measures to prevent the unit from tipping over.
